- **targetInfo** (*list*) – Configuration Templates's targetInfo (list of objects).
- **templateId** (*string*) – Configuration Templates's UUID of template to be provisioned .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_template_deployment_status(*deployment_id, headers=None, **request_parameters*)

API to retrieve the status of template deployment. .

Parameters

- **deployment_id** (*basestring*) – deploymentId path parameter. UUID of deployment to retrieve template deployment status .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

export_templates(*headers=None, payload=None, active_validation=True, **request_parameters*)

Exports the templates for given templateIds. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

preview_template(*deviceId=None, params=None, resourceParams=None, templateId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to preview a template. .

Parameters

- **deviceId** (*string*) – Configuration Templates's UUID of device to get template preview .
- **params** (*object*) – Configuration Templates's Params to render preview .
- **resourceParams** (*list*) – Configuration Templates's Resource params to render preview (list of objects).

- **templateId** (*string*) – Configuration Templates’s UUID of template to get template preview .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

version_template(*comments=None, templateId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to version the current contents of the template. .

Parameters

- **comments** (*string*) – Configuration Templates’s Template version comments .
- **templateId** (*string*) – Configuration Templates’s UUID of template .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_template_versions(*template_id, headers=None, **request_parameters*)

Get all the versions of template by its id .

Parameters

- **template_id** (*basestring*) – templateId path parameter. templateId(UUID) to get list of versioned templates .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deletes_the_template(*template_id*, *headers=None*, ***request_parameters*)

Deletes the template by its id .

Parameters

- **template_id** (*basestring*) – templateId path parameter. templateId(UUID) of template to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_template_details(*template_id*, *latest_version=None*, *headers=None*, ***request_parameters*)

Details of the template by its id .

Parameters

- **template_id** (*basestring*) – templateId path parameter. TemplateId(UUID) to get details of the template .
- **latest_version** (*bool*) – latestVersion query parameter. latestVersion flag to get the latest versioned template .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deploy_template_v2(*forcePushTemplate=None, isComposite=None, mainTemplateId=None, memberTemplateDeploymentInfo=None, targetInfo=None, templateId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

V2 API to deploy a template. .

Parameters

- **forcePushTemplate** (*boolean*) – Configuration Templates's forcePushTemplate.
- **isComposite** (*boolean*) – Configuration Templates's Composite template flag .
- **mainTemplateId** (*string*) – Configuration Templates's Main template UUID of versioned template .
- **memberTemplateDeploymentInfo** (*list*) – Configuration Templates's memberTemplateDeploymentInfo (list of objects).
- **targetInfo** (*list*) – Configuration Templates's targetInfo (list of objects).
- **templateId** (*string*) – Configuration Templates's UUID of template to be provisioned .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_onboarding_pnp

class DeviceOnboardingPnp

Cisco DNA Center Device Onboarding (PnP) API (version: 2.2.2.3).

Wraps the DNA Center Device Onboarding (PnP) API and exposes the API as native Python methods that return native Python objects.

```
add_device(_id=None, deviceInfo=None, runSummaryList=None, systemResetWorkflow=None,
            systemWorkflow=None, tenantId=None, version=None, workflow=None,
            workflowParameters=None, headers=None, payload=None, active_validation=True,
            **request_parameters)
```

Adds a device to the PnP database. .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)’s _id.
- **deviceInfo** (*object*) – Device Onboarding (PnP)’s deviceInfo.
- **runSummaryList** (*list*) – Device Onboarding (PnP)’s runSummaryList (list of objects).
- **systemResetWorkflow** (*object*) – Device Onboarding (PnP)’s systemResetWorkflow.
- **systemWorkflow** (*object*) – Device Onboarding (PnP)’s systemWorkflow.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **version** (*integer*) – Device Onboarding (PnP)’s version.
- **workflow** (*object*) – Device Onboarding (PnP)’s workflow.
- **workflowParameters** (*object*) – Device Onboarding (PnP)’s workflowParameters.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_device_list(cm_state=None, hostname=None, last_contact=None, limit=None, mac_address=None,
                name=None, offset=None, onb_state=None, pid=None, project_id=None,
                project_name=None, serial_number=None, site_name=None, smart_account_id=None,
                sort=None, sort_order=None, source=None, state=None, virtual_account_id=None,
                workflow_id=None, workflow_name=None, headers=None, **request_parameters)
```

Returns list of devices based on filter criteria. If a limit is not specified, it will default to return 50 devices. Pagination and sorting are also supported by this endpoint .

Parameters

- **limit** (*int*) – limit query parameter. Limits number of results .
- **offset** (*int*) – offset query parameter. Index of first result .
- **sort** (*basestring*, *list*, *set*, *tuple*) – sort query parameter. Comma seperated list of fields to sort on .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **serial_number** (*basestring*, *list*, *set*, *tuple*) – serialNumber query parameter. Device Serial Number .
- **state** (*basestring*, *list*, *set*, *tuple*) – state query parameter. Device State .
- **onb_state** (*basestring*, *list*, *set*, *tuple*) – onbState query parameter. Device Onboarding State .
- **cm_state** (*basestring*, *list*, *set*, *tuple*) – cmState query parameter. Device Connection Manager State .
- **name** (*basestring*, *list*, *set*, *tuple*) – name query parameter. Device Name .
- **pid** (*basestring*, *list*, *set*, *tuple*) – pid query parameter. Device ProductId .
- **source** (*basestring*, *list*, *set*, *tuple*) – source query parameter. Device Source .
- **project_id** (*basestring*, *list*, *set*, *tuple*) – projectId query parameter. Device Project Id .
- **workflow_id** (*basestring*, *list*, *set*, *tuple*) – workflowId query parameter. Device Workflow Id .
- **project_name** (*basestring*, *list*, *set*, *tuple*) – projectName query parameter. Device Project Name .
- **workflow_name** (*basestring*, *list*, *set*, *tuple*) – workflowName query parameter. Device Workflow Name .
- **smart_account_id** (*basestring*, *list*, *set*, *tuple*) – smartAccountId query parameter. Device Smart Account .
- **virtual_account_id** (*basestring*, *list*, *set*, *tuple*) – virtualAccountId query parameter. Device Virtual Account .
- **last_contact** (*bool*) – lastContact query parameter. Device Has Contacted lastContact > 0 .
- **mac_address** (*basestring*) – macAddress query parameter. Device Mac Address .
- **hostname** (*basestring*) – hostname query parameter. Device Hostname .
- **site_name** (*basestring*) – siteName query parameter. Device Site Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

claim_device(*configFileUrl=None, configId=None, deviceClaimList=None, fileServiceId=None, imageId=None, imageUrl=None, populateInventory=None, projectId=None, workflowId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Claims one of more devices with specified workflow .

Parameters

- **configFileUrl** (*string*) – Device Onboarding (PnP)'s configFileUrl.
- **configId** (*string*) – Device Onboarding (PnP)'s configId.
- **deviceClaimList** (*list*) – Device Onboarding (PnP)'s deviceClaimList (list of objects).
- **fileServiceId** (*string*) – Device Onboarding (PnP)'s fileServiceId.
- **imageId** (*string*) – Device Onboarding (PnP)'s imageId.
- **imageUrl** (*string*) – Device Onboarding (PnP)'s imageUrl.
- **populateInventory** (*boolean*) – Device Onboarding (PnP)'s populateInventory.
- **projectId** (*string*) – Device Onboarding (PnP)'s projectId.
- **workflowId** (*string*) – Device Onboarding (PnP)'s workflowId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_device_count(cm_state=None, last_contact=None, name=None, onb_state=None, pid=None,
                  project_id=None, project_name=None, serial_number=None, smart_account_id=None,
                  source=None, state=None, virtual_account_id=None, workflow_id=None,
                  workflow_name=None, headers=None, **request_parameters)
```

Returns the device count based on filter criteria. This is useful for pagination .

Parameters

- **serial_number** (*basestring*, *list*, *set*, *tuple*) – serialNumber query parameter. Device Serial Number .
- **state** (*basestring*, *list*, *set*, *tuple*) – state query parameter. Device State .
- **onb_state** (*basestring*, *list*, *set*, *tuple*) – onbState query parameter. Device Onboarding State .
- **cm_state** (*basestring*, *list*, *set*, *tuple*) – cmState query parameter. Device Connection Manager State .
- **name** (*basestring*, *list*, *set*, *tuple*) – name query parameter. Device Name .
- **pid** (*basestring*, *list*, *set*, *tuple*) – pid query parameter. Device ProductId .
- **source** (*basestring*, *list*, *set*, *tuple*) – source query parameter. Device Source .
- **project_id** (*basestring*, *list*, *set*, *tuple*) – projectId query parameter. Device Project Id .
- **workflow_id** (*basestring*, *list*, *set*, *tuple*) – workflowId query parameter. Device Workflow Id .
- **project_name** (*basestring*, *list*, *set*, *tuple*) – projectName query parameter. Device Project Name .
- **workflow_name** (*basestring*, *list*, *set*, *tuple*) – workflowName query parameter. Device Workflow Name .
- **smart_account_id** (*basestring*, *list*, *set*, *tuple*) – smartAccountId query parameter. Device Smart Account .
- **virtual_account_id** (*basestring*, *list*, *set*, *tuple*) – virtualAccountId query parameter. Device Virtual Account .
- **last_contact** (*bool*) – lastContact query parameter. Device Has Contacted lastContact > 0 .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_device_history(*serial_number*, *sort=None*, *sort_order=None*, *headers=None*, ***request_parameters*)

Returns history for a specific device. Serial number is a required parameter .

Parameters

- **serial_number** (*basestring*) – serialNumber query parameter. Device Serial Number .
- **sort** (*basestring*, *list*, *set*, *tuple*) – sort query parameter. Comma seperated list of fields to sort on .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

import_devices_in_bulk(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add devices to PnP in bulk .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

reset_device(*deviceResetList=None, projectId=None, workflowId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Recovers a device from a Workflow Execution Error state .

Parameters

- **deviceResetList** (*list*) – Device Onboarding (PnP)’s deviceResetList (list of objects).
- **projectId** (*string*) – Device Onboarding (PnP)’s projectId.
- **workflowId** (*string*) – Device Onboarding (PnP)’s workflowId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_sync_result_for_virtual_account(*domain, name, headers=None, **request_parameters*)

Returns the summary of devices synced from the given smart account & virtual account with PnP .

Parameters

- **domain** (*basestring*) – domain path parameter. Smart Account Domain .
- **name** (*basestring*) – name path parameter. Virtual Account Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

claim_a_device_to_a_site(*deviceId=None, siteId=None, type=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Claim a device based on DNA-C Site based design process. Different parameters are required for different device platforms. .

Parameters

- **deviceId** (*string*) – Device Onboarding (PnP)’s deviceId.
- **siteId** (*string*) – Device Onboarding (PnP)’s siteId.
- **type** (*string*) – Device Onboarding (PnP)’s type. Available values are ‘Default’, ‘AccessPoint’, ‘StackSwitch’, ‘Sensor’ and ‘MobilityExpress’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

preview_config(*deviceId=None, siteId=None, type=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Triggers a preview for site-based Day 0 Configuration .

Parameters

- **deviceId** (*string*) – Device Onboarding (PnP)’s deviceId.
- **siteId** (*string*) – Device Onboarding (PnP)’s siteId.
- **type** (*string*) – Device Onboarding (PnP)’s type. Available values are ‘Default’, ‘AccessPoint’, ‘StackSwitch’, ‘Sensor’ and ‘MobilityExpress’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

un_claim_device(*deviceIdList=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Un-Claims one or more devices with specified workflow .

Parameters

- **deviceIdList** (*list*) – Device Onboarding (PnP)’s deviceIdList (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sync_virtual_account_devices(*autoSyncPeriod=None, ccoUser=None, expiry=None, lastSync=None, profile=None, smartAccountId=None, syncResult=None, syncResultStr=None, syncStartTime=None, syncStatus=None, tenantId=None, token=None, virtualAccountId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Synchronizes the device info from the given smart account & virtual account with the PnP database. The response payload returns a list of synced devices .

Parameters

- **autoSyncPeriod** (*integer*) – Device Onboarding (PnP)’s autoSyncPeriod.
- **ccoUser** (*string*) – Device Onboarding (PnP)’s ccoUser.
- **expiry** (*integer*) – Device Onboarding (PnP)’s expiry.
- **lastSync** (*integer*) – Device Onboarding (PnP)’s lastSync.
- **profile** (*object*) – Device Onboarding (PnP)’s profile.
- **smartAccountId** (*string*) – Device Onboarding (PnP)’s smartAccountId.
- **syncResult** (*object*) – Device Onboarding (PnP)’s syncResult.
- **syncResultStr** (*string*) – Device Onboarding (PnP)’s syncResultStr.
- **syncStartTime** (*integer*) – Device Onboarding (PnP)’s syncStartTime.

- **syncStatus** (*string*) – Device Onboarding (PnP)’s syncStatus. Available values are ‘NOT_SYNCED’, ‘SYNCING’, ‘SUCCESS’ and ‘FAILURE’.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **token** (*string*) – Device Onboarding (PnP)’s token.
- **virtualAccountId** (*string*) – Device Onboarding (PnP)’s virtualAccountId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_device(*id*, *_id=None*, *deviceInfo=None*, *runSummaryList=None*, *systemResetWorkflow=None*, *systemWorkflow=None*, *tenantId=None*, *version=None*, *workflow=None*, *workflowParameters=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Updates device details specified by device id in PnP database .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)’s _id.
- **deviceInfo** (*object*) – Device Onboarding (PnP)’s deviceInfo.
- **runSummaryList** (*list*) – Device Onboarding (PnP)’s runSummaryList (list of objects).
- **systemResetWorkflow** (*object*) – Device Onboarding (PnP)’s systemResetWorkflow.
- **systemWorkflow** (*object*) – Device Onboarding (PnP)’s systemWorkflow.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **version** (*integer*) – Device Onboarding (PnP)’s version.
- **workflow** (*object*) – Device Onboarding (PnP)’s workflow.
- **workflowParameters** (*object*) – Device Onboarding (PnP)’s workflowParameters.
- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_device_by_id_from_pnp(*id*, *headers=None*, ****request_parameters**)

Deletes specified device from PnP database .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_by_id(*id*, *headers=None*, ****request_parameters**)

Returns device details specified by device id .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_pnp_global_settings(_id=None, aaaCredentials=None, acceptEula=None, defaultProfile=None,
                           savaMappingList=None, taskTimeOuts=None, tenantId=None,
                           version=None, headers=None, payload=None, active_validation=True,
                           **request_parameters)
```

Updates the user's list of global PnP settings .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)'s _id.
- **aaaCredentials** (*object*) – Device Onboarding (PnP)'s aaaCredentials.
- **acceptEula** (*boolean*) – Device Onboarding (PnP)'s acceptEula.
- **defaultProfile** (*object*) – Device Onboarding (PnP)'s defaultProfile.
- **savaMappingList** (*list*) – Device Onboarding (PnP)'s savaMappingList (list of objects).
- **taskTimeOuts** (*object*) – Device Onboarding (PnP)'s taskTimeOuts.
- **tenantId** (*string*) – Device Onboarding (PnP)'s tenantId.
- **version** (*integer*) – Device Onboarding (PnP)'s version.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_pnp_global_settings(headers=None, **request_parameters)
```

Returns global PnP settings of the user .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_smart_account_list(*headers=None, **request_parameters*)

Returns the list of Smart Account domains .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_virtual_account_list(*domain, headers=None, **request_parameters*)

Returns list of virtual accounts associated with the specified smart account .

Parameters

- **domain** (*basestring*) – domain path parameter. Smart Account Domain .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
add_virtual_account(autoSyncPeriod=None, ccoUser=None, expiry=None, lastSync=None,
                    profile=None, smartAccountId=None, syncResult=None, syncResultStr=None,
                    syncStartTime=None, syncStatus=None, tenantId=None, token=None,
                    virtualAccountId=None, headers=None, payload=None, active_validation=True,
                    **request_parameters)
```

Registers a Smart Account, Virtual Account and the relevant server profile info with the PnP System & database. The devices present in the registered virtual account are synced with the PnP database as well. The response payload returns the new profile .

Parameters

- **autoSyncPeriod** (*integer*) – Device Onboarding (PnP)’s autoSyncPeriod.
- **ccoUser** (*string*) – Device Onboarding (PnP)’s ccoUser.
- **expiry** (*integer*) – Device Onboarding (PnP)’s expiry.
- **lastSync** (*integer*) – Device Onboarding (PnP)’s lastSync.
- **profile** (*object*) – Device Onboarding (PnP)’s profile.
- **smartAccountId** (*string*) – Device Onboarding (PnP)’s smartAccountId.
- **syncResult** (*object*) – Device Onboarding (PnP)’s syncResult.
- **syncResultStr** (*string*) – Device Onboarding (PnP)’s syncResultStr.
- **syncStartTime** (*integer*) – Device Onboarding (PnP)’s syncStartTime.
- **syncStatus** (*string*) – Device Onboarding (PnP)’s syncStatus. Available values are ‘NOT_SYNCED’, ‘SYNCING’, ‘SUCCESS’ and ‘FAILURE’.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **token** (*string*) – Device Onboarding (PnP)’s token.
- **virtualAccountId** (*string*) – Device Onboarding (PnP)’s virtualAccountId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_pnp_server_profile(autoSyncPeriod=None, ccoUser=None, expiry=None, lastSync=None,
                          profile=None, smartAccountId=None, syncResult=None,
                          syncResultStr=None, syncStartTime=None, syncStatus=None,
                          tenantId=None, token=None, virtualAccountId=None, headers=None,
                          payload=None, active_validation=True, **request_parameters)
```

Updates the PnP Server profile in a registered Virtual Account in the PnP database. The response payload returns the updated smart & virtual account info .

Parameters

- **autoSyncPeriod** (*integer*) – Device Onboarding (PnP)’s autoSyncPeriod.
- **ccoUser** (*string*) – Device Onboarding (PnP)’s ccoUser.
- **expiry** (*integer*) – Device Onboarding (PnP)’s expiry.
- **lastSync** (*integer*) – Device Onboarding (PnP)’s lastSync.
- **profile** (*object*) – Device Onboarding (PnP)’s profile.
- **smartAccountId** (*string*) – Device Onboarding (PnP)’s smartAccountId.
- **syncResult** (*object*) – Device Onboarding (PnP)’s syncResult.
- **syncResultStr** (*string*) – Device Onboarding (PnP)’s syncResultStr.
- **syncStartTime** (*integer*) – Device Onboarding (PnP)’s syncStartTime.
- **syncStatus** (*string*) – Device Onboarding (PnP)’s syncStatus. Available values are ‘NOT_SYNCED’, ‘SYNCING’, ‘SUCCESS’ and ‘FAILURE’.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **token** (*string*) – Device Onboarding (PnP)’s token.
- **virtualAccountId** (*string*) – Device Onboarding (PnP)’s virtualAccountId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deregister_virtual_account (*domain*, *name*, *headers=None*, ***request_parameters*)

Deregisters the specified smart account & virtual account info and the associated device information from the PnP System & database. The devices associated with the deregistered virtual account are removed from the PnP database as well. The response payload contains the deregistered smart & virtual account information .

Parameters

- **domain** (*basestring*) – domain query parameter. Smart Account Domain .
- **name** (*basestring*) – name query parameter. Virtual Account Name .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_workflows(*limit=None, name=None, offset=None, sort=None, sort_order=None, type=None, headers=None, **request_parameters*)

Returns the list of workflows based on filter criteria. If a limit is not specified, it will default to return 50 workflows. Pagination and sorting are also supported by this endpoint .

Parameters

- **limit** (*int*) – limit query parameter. Limits number of results .
- **offset** (*int*) – offset query parameter. Index of first result .
- **sort** (*basestring, list, set, tuple*) – sort query parameter. Comma seperated list of fields to sort on .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **type** (*basestring, list, set, tuple*) – type query parameter. Workflow Type .
- **name** (*basestring, list, set, tuple*) – name query parameter. Workflow Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_a_workflow(*_id=None, addToInventory=None, addedOn=None, configId=None, currTaskIdx=None, description=None, endTime=None, execTime=None, imageId=None, instanceType=None, lastupdateOn=None, name=None, startTime=None, state=None, tasks=None, tenantId=None, type=None, useState=None, version=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Adds a PnP Workflow along with the relevant tasks in the workflow into the PnP database .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)’s _id.
- **addToInventory** (*boolean*) – Device Onboarding (PnP)’s addToInventory.
- **addedOn** (*integer*) – Device Onboarding (PnP)’s addedOn.
- **configId** (*string*) – Device Onboarding (PnP)’s configId.
- **currTaskIdx** (*integer*) – Device Onboarding (PnP)’s currTaskIdx.
- **description** (*string*) – Device Onboarding (PnP)’s description.
- **endTime** (*integer*) – Device Onboarding (PnP)’s endTime.
- **execTime** (*integer*) – Device Onboarding (PnP)’s execTime.
- **imageId** (*string*) – Device Onboarding (PnP)’s imageId.
- **instanceType** (*string*) – Device Onboarding (PnP)’s instanceType. Available values are ‘SystemWorkflow’, ‘UserWorkflow’ and ‘SystemResetWorkflow’.
- **lastupdateOn** (*integer*) – Device Onboarding (PnP)’s lastupdateOn.
- **name** (*string*) – Device Onboarding (PnP)’s name.
- **startTime** (*integer*) – Device Onboarding (PnP)’s startTime.
- **state** (*string*) – Device Onboarding (PnP)’s state.
- **tasks** (*list*) – Device Onboarding (PnP)’s tasks (list of objects).
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **type** (*string*) – Device Onboarding (PnP)’s type.
- **useState** (*string*) – Device Onboarding (PnP)’s useState.
- **version** (*integer*) – Device Onboarding (PnP)’s version.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_workflow_count(*name=None, headers=None, **request_parameters*)

Returns the workflow count .

Parameters

- **name** (*basestring, list, set, tuple*) – name query parameter. Workflow Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_workflow_by_id(*id, headers=None, **request_parameters*)

Returns a workflow specified by id .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_workflow_by_id(*id, headers=None, **request_parameters*)

Deletes a workflow specified by id .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_workflow(*id*, *_id=None*, *addToInventory=None*, *addedOn=None*, *configId=None*, *currTaskIdx=None*, *description=None*, *endTime=None*, *execTime=None*, *imageId=None*, *instanceType=None*, *lastupdateOn=None*, *name=None*, *startTime=None*, *state=None*, *tasks=None*, *tenantId=None*, *type=None*, *useState=None*, *version=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Updates an existing workflow .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)'s _id.
- **addToInventory** (*boolean*) – Device Onboarding (PnP)'s addToInventory.
- **addedOn** (*integer*) – Device Onboarding (PnP)'s addedOn.
- **configId** (*string*) – Device Onboarding (PnP)'s configId.
- **currTaskIdx** (*integer*) – Device Onboarding (PnP)'s currTaskIdx.
- **description** (*string*) – Device Onboarding (PnP)'s description.
- **endTime** (*integer*) – Device Onboarding (PnP)'s endTime.
- **execTime** (*integer*) – Device Onboarding (PnP)'s execTime.
- **imageId** (*string*) – Device Onboarding (PnP)'s imageId.
- **instanceType** (*string*) – Device Onboarding (PnP)'s instanceType. Available values are 'SystemWorkflow', 'UserWorkflow' and 'SystemResetWorkflow'.
- **lastupdateOn** (*integer*) – Device Onboarding (PnP)'s lastupdateOn.
- **name** (*string*) – Device Onboarding (PnP)'s name.
- **startTime** (*integer*) – Device Onboarding (PnP)'s startTime.
- **state** (*string*) – Device Onboarding (PnP)'s state.
- **tasks** (*list*) – Device Onboarding (PnP)'s tasks (list of objects).
- **tenantId** (*string*) – Device Onboarding (PnP)'s tenantId.
- **type** (*string*) – Device Onboarding (PnP)'s type.
- **useState** (*string*) – Device Onboarding (PnP)'s useState.
- **version** (*integer*) – Device Onboarding (PnP)'s version.
- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.

- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_replacement**class DeviceReplacement**

Cisco DNA Center Device Replacement API (version: 2.2.2.3).

Wraps the DNA Center Device Replacement API and exposes the API as native Python methods that return native Python objects.

return_replacement_devices_with_details(*family=None, faulty_device_name=None, faulty_device_platform=None, faulty_device_serial_number=None, limit=None, offset=None, replacement_device_platform=None, replacement_device_serial_number=None, replacement_status=None, sort_by=None, sort_order=None, headers=None, **request_parameters*)

Get list of replacement devices with replacement details and it can filter replacement devices based on Faulty Device Name, Faulty Device Platform, Replacement Device Platform, Faulty Device Serial Number, Replacement Device Serial Number, Device Replacement status, Product Family. .

Parameters

- **faulty_device_name** (*basestring*) – faultyDeviceName query parameter. Faulty Device Name .
- **faulty_device_platform** (*basestring*) – faultyDevicePlatform query parameter. Faulty Device Platform .
- **replacement_device_platform** (*basestring*) – replacementDevicePlatform query parameter. Replacement Device Platform .
- **faulty_device_serial_number** (*basestring*) – faultyDeviceSerialNumber query parameter. Faulty Device Serial Number .
- **replacement_device_serial_number** (*basestring*) – replacementDeviceSerialNumber query parameter. Replacement Device Serial Number .
- **replacement_status** (*basestring, list, set, tuple*) – replacementStatus query parameter. Device Replacement status [READY-FOR-REPLACEMENT, REPLACEMENT-IN-PROGRESS, REPLACEMENT-SCHEDULED, REPLACED, ERROR, NETWORK_READINESS_REQUESTED, NETWORK_READINESS_FAILED]

- **family** (*basestring*, *list*, *set*, *tuple*) – family query parameter. List of families[Routers, Switches and Hubs, AP] .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy this field. SortBy is mandatory when order is used. .
- **sort_order** (*basestring*) – sortOrder query parameter. Order on display-Name[ASC,DESC] .
- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

unmark_device_for_replacement(*headers=None, payload=None, active_validation=True, **request_parameters*)

UnMarks device for replacement .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

mark_device_for_replacement(*headers=None, payload=None, active_validation=True, **request_parameters*)

Marks device for replacement .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

return_replacement_devices_count(*replacement_status=None, headers=None, **request_parameters*)

Get replacement devices count .

Parameters

- **replacement_status** (*basestring, list, set, tuple*) – replacementStatus query parameter. Device Replacement status list[READY-FOR-REPLACEMENT, REPLACEMENT-IN-PROGRESS, REPLACEMENT-SCHEDULED, REPLACED, ERROR] .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deploy_device_replacement_workflow(*faultyDeviceSerialNumber=None, replacementDeviceSerialNumber=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to trigger RMA workflow that will replace faulty device with replacement device with same configuration and images .

Parameters

- **faultyDeviceSerialNumber** (*string*) – Device Replacement’s faultyDeviceSerial-Number.
- **replacementDeviceSerialNumber** (*string*) – Device Replacement’s replacementDe-viceSerialNumber.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for param-eters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket nota-tion.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

devices

class Devices

Cisco DNA Center Devices API (version: 2.2.2.3).

Wraps the DNA Center Devices API and exposes the API as native Python methods that return native Python objects.

get_device_detail(*identifier, search_by, timestamp=None, headers=None, **request_parameters*)

Returns detailed Network Device information retrieved by Mac Address, Device Name or UUID for any given point of time. .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the device data is required .
- **search_by** (*basestring*) – searchBy query parameter. MAC Address or Device Name value or UUID of the network device .
- **identifier** (*basestring*) – identifier query parameter. One of keywords : macAddress or uuid or nwDeviceName .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for param-eters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket nota-tion.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_enrichment_details(*headers=None, **request_parameters*)

Enriches a given network device context (device id or device Mac Address or device management IP address) with details about the device and neighbor topology .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type*list***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

devices(*device_role=None, end_time=None, health=None, limit=None, offset=None, site_id=None, start_time=None, headers=None, **request_parameters*)

Intent API for accessing DNA Assurance Device object for generating reports, creating dashboards or creating additional value added services. .

Parameters

- **device_role** (*basestring*) – deviceRole query parameter. The device role (One of CORE, ACCESS, DISTRIBUTION, ROUTER, WLC, AP) .
- **site_id** (*basestring*) – siteId query parameter. Assurance site UUID value .
- **health** (*basestring*) – health query parameter. The device overall health (One of POOR, FAIR, GOOD) .
- **start_time** (*int*) – startTime query parameter. UTC epoch time in milliseconds .
- **end_time** (*int*) – endTime query parameter. UTC epoch time in milliseconds .
- **limit** (*int*) – limit query parameter. Max number of device entries in the response (default to 50. Max at 1000) .
- **offset** (*int*) – offset query parameter. The offset of the first device in the returned data .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_all_interfaces(*limit=None, offset=None, headers=None, **request_parameters*)

Returns all available interfaces. This endpoint can return a maximum of 500 interfaces .

Parameters

- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_interface_count(*headers=None, **request_parameters*)

Returns the count of interfaces for all devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_interface_by_ip(*ip_address*, *headers=None*, ***request_parameters*)

Returns list of interfaces for specified device management IP address .

Parameters

- **ip_address** (*basestring*) – ipAddress path parameter. IP address of the interface .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_isis_interfaces(*headers=None*, ***request_parameters*)

Returns the interfaces that has ISIS enabled .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_interface_info_by_id(*device_id*, *headers=None*, ***request_parameters*)

Returns list of interfaces by specified device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_interface_count_by_id(*device_id*, *headers=None*, ***request_parameters*)

Returns the interface count for the given device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_interface_details(*device_id*, *name*, *headers=None*, ***request_parameters*)

Returns interface by specified device Id and interface name .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **name** (*basestring*) – name query parameter. Interface name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_interfaces_by_specified_range(*device_id*, *records_to_return*, *start_index*,
headers=None, ***request_parameters*)

Returns the list of interfaces for the device for the specified range .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_ospf_interfaces(*headers=None*, ***request_parameters*)

Returns the interfaces that has OSPF enabled .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_interface_by_id(*id*, *headers=None*, ***request_parameters*)

Returns the interface for the given interface ID .

Parameters

- **id** (*basestring*) – id path parameter. Interface ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_list(*associated_wlc_ip=None, collection_interval=None, collection_status=None, device_support_level=None, error_code=None, error_description=None, family=None, hostname=None, id=None, license_name=None, license_status=None, license_type=None, location=None, location_name=None, mac_address=None, management_ip_address=None, module_equipmenttype=None, module_name=None, module_operationstatecode=None, module_partnumber=None, module_servicestate=None, module_vendorequipmenttype=None, not_synced_for_minutes=None, platform_id=None, reachability_status=None, role=None, serial_number=None, series=None, software_type=None, software_version=None, type=None, up_time=None, headers=None, **request_parameters*)

Returns list of network devices based on filter criteria such as management IP address, mac address, hostname, etc. You can use the `*` in any value to conduct a wildcard search. For example, to find all hostnames beginning with myhost in the IP address range 192.25.18.n, issue the following request: GET /dna/intent/api/v1/network-device?hostname=myhost.*&managementIpAddress=192.25.18.* If id parameter is provided with comma separated ids, it will return the list of network-devices for the given ids and ignores the other request parameters. .

Parameters

- **hostname** (*basestring, list, set, tuple*) – hostname query parameter.
- **management_ip_address** (*basestring, list, set, tuple*) – managementIpAddress query parameter.
- **mac_address** (*basestring, list, set, tuple*) – macAddress query parameter.
- **location_name** (*basestring, list, set, tuple*) – locationName query parameter.
- **serial_number** (*basestring, list, set, tuple*) – serialNumber query parameter.
- **location** (*basestring, list, set, tuple*) – location query parameter.
- **family** (*basestring, list, set, tuple*) – family query parameter.
- **type** (*basestring, list, set, tuple*) – type query parameter.
- **series** (*basestring, list, set, tuple*) – series query parameter.
- **collection_status** (*basestring, list, set, tuple*) – collectionStatus query parameter.

- **collection_interval** (*basestring, list, set, tuple*) – collectionInterval query parameter.
- **not_synced_for_minutes** (*basestring, list, set, tuple*) – notSyncedForMinutes query parameter.
- **error_code** (*basestring, list, set, tuple*) – errorCode query parameter.
- **error_description** (*basestring, list, set, tuple*) – errorDescription query parameter.
- **software_version** (*basestring, list, set, tuple*) – softwareVersion query parameter.
- **software_type** (*basestring, list, set, tuple*) – softwareType query parameter.
- **platform_id** (*basestring, list, set, tuple*) – platformId query parameter.
- **role** (*basestring, list, set, tuple*) – role query parameter.
- **reachability_status** (*basestring, list, set, tuple*) – reachabilityStatus query parameter.
- **up_time** (*basestring, list, set, tuple*) – upTime query parameter.
- **associated_wlc_ip** (*basestring, list, set, tuple*) – associatedWlcIp query parameter.
- **license_name** (*basestring, list, set, tuple*) – license.name query parameter.
- **license_type** (*basestring, list, set, tuple*) – license.type query parameter.
- **license_status** (*basestring, list, set, tuple*) – license.status query parameter.
- **module_name** (*basestring, list, set, tuple*) – module+name query parameter.
- **module_equipmenttype** (*basestring, list, set, tuple*) – module+equipmenttype query parameter.
- **module_servicestate** (*basestring, list, set, tuple*) – module+servicestate query parameter.
- **module_vendorequipmenttype** (*basestring, list, set, tuple*) – module+vendorequipmenttype query parameter.
- **module_partnumber** (*basestring, list, set, tuple*) – module+partnumber query parameter.
- **module_operationstatecode** (*basestring, list, set, tuple*) – module+operationstatecode query parameter.
- **id** (*basestring*) – id query parameter. Accepts comma separated ids and return list of network-devices for the given ids. If invalid or not-found ids are provided, null entry will be returned in the list. .
- **device_support_level** (*basestring*) – deviceSupportLevel query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
add_device(cliTransport=None, computeDevice=None, enablePassword=None,  
extendedDiscoveryInfo=None, httpPassword=None, httpPort=None, httpSecure=None,  
httpUserName=None, ipAddress=None, merakiOrgId=None, netconfPort=None,  
password=None, serialNumber=None, snmpAuthPassphrase=None, snmpAuthProtocol=None,  
snmpMode=None, snmpPrivPassphrase=None, snmpPrivProtocol=None,  
snmpROCommunity=None, snmpRWCommunity=None, snmpRetry=None, snmpTimeout=None,  
snmpUserName=None, snmpVersion=None, type=None, updateMgmtIPaddressList=None,  
userName=None, headers=None, payload=None, active_validation=True,  
**request_parameters)
```

Adds the device with given credential .

Parameters

- **cliTransport** (*string*) – Devices's cliTransport.
- **computeDevice** (*boolean*) – Devices's computeDevice.
- **enablePassword** (*string*) – Devices's enablePassword.
- **extendedDiscoveryInfo** (*string*) – Devices's extendedDiscoveryInfo.
- **httpPassword** (*string*) – Devices's httpPassword.
- **httpPort** (*string*) – Devices's httpPort.
- **httpSecure** (*boolean*) – Devices's httpSecure.
- **httpUserName** (*string*) – Devices's httpUserName.
- **ipAddress** (*list*) – Devices's ipAddress (list of strings).
- **merakiOrgId** (*list*) – Devices's merakiOrgId (list of strings).
- **netconfPort** (*string*) – Devices's netconfPort.
- **password** (*string*) – Devices's password.
- **serialNumber** (*string*) – Devices's serialNumber.
- **snmpAuthPassphrase** (*string*) – Devices's snmpAuthPassphrase.
- **snmpAuthProtocol** (*string*) – Devices's snmpAuthProtocol.
- **snmpMode** (*string*) – Devices's snmpMode.
- **snmpPrivPassphrase** (*string*) – Devices's snmpPrivPassphrase.
- **snmpPrivProtocol** (*string*) – Devices's snmpPrivProtocol.
- **snmpROCommunity** (*string*) – Devices's snmpROCommunity.
- **snmpRWCommunity** (*string*) – Devices's snmpRWCommunity.
- **snmpRetry** (*integer*) – Devices's snmpRetry.
- **snmpTimeout** (*integer*) – Devices's snmpTimeout.

- **snmpUserName** (*string*) – Devices’s snmpUserName.
- **snmpVersion** (*string*) – Devices’s snmpVersion.
- **type** (*string*) – Devices’s type. Available values are ‘COMPUTE_DEVICE’, ‘MERAKI_DASHBOARD’, ‘NETWORK_DEVICE’ and ‘NODATACHANGE’.
- **updateMgmtIPaddressList** (*list*) – Devices’s updateMgmtIPaddressList (list of objects).
- **userName** (*string*) – Devices’s userName.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sync_devices(*cliTransport=None, computeDevice=None, enablePassword=None, extendedDiscoveryInfo=None, httpPassword=None, httpPort=None, httpSecure=None, httpUserName=None, ipAddress=None, merakiOrgId=None, netconfPort=None, password=None, serialNumber=None, snmpAuthPassphrase=None, snmpAuthProtocol=None, snmpMode=None, snmpPrivPassphrase=None, snmpPrivProtocol=None, snmpROCommunity=None, snmpRWCommunity=None, snmpRetry=None, snmpTimeout=None, snmpUserName=None, snmpVersion=None, type=None, updateMgmtIPaddressList=None, userName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Sync the devices provided as input .

Parameters

- **cliTransport** (*string*) – Devices’s cliTransport.
- **computeDevice** (*boolean*) – Devices’s computeDevice.
- **enablePassword** (*string*) – Devices’s enablePassword.
- **extendedDiscoveryInfo** (*string*) – Devices’s extendedDiscoveryInfo.
- **httpPassword** (*string*) – Devices’s httpPassword.
- **httpPort** (*string*) – Devices’s httpPort.
- **httpSecure** (*boolean*) – Devices’s httpSecure.
- **httpUserName** (*string*) – Devices’s httpUserName.
- **ipAddress** (*list*) – Devices’s ipAddress (list of strings).

- **merakiOrgId** (*list*) – Devices’s merakiOrgId (list of strings).
- **netconfPort** (*string*) – Devices’s netconfPort.
- **password** (*string*) – Devices’s password.
- **serialNumber** (*string*) – Devices’s serialNumber.
- **snmpAuthPassphrase** (*string*) – Devices’s snmpAuthPassphrase.
- **snmpAuthProtocol** (*string*) – Devices’s snmpAuthProtocol.
- **snmpMode** (*string*) – Devices’s snmpMode.
- **snmpPrivPassphrase** (*string*) – Devices’s snmpPrivPassphrase.
- **snmpPrivProtocol** (*string*) – Devices’s snmpPrivProtocol.
- **snmpROCommunity** (*string*) – Devices’s snmpROCommunity.
- **snmpRWCommunity** (*string*) – Devices’s snmpRWCommunity.
- **snmpRetry** (*integer*) – Devices’s snmpRetry.
- **snmpTimeout** (*integer*) – Devices’s snmpTimeout.
- **snmpUserName** (*string*) – Devices’s snmpUserName.
- **snmpVersion** (*string*) – Devices’s snmpVersion.
- **type** (*string*) – Devices’s type. Available values are ‘COMPUTE_DEVICE’, ‘MERAKI_DASHBOARD’, ‘NETWORK_DEVICE’ and ‘NODATACHANGE’.
- **updateMgmtIPAddressList** (*list*) – Devices’s updateMgmtIPAddressList (list of objects).
- **userName** (*string*) – Devices’s userName.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
retrieves_all_network_devices(associated_wlc_ip=None, collection_interval=None,
                               collection_status=None, error_code=None, family=None,
                               hostname=None, limit=None, mac_address=None,
                               management_ip_address=None, offset=None, platform_id=None,
                               reachability_failure_reason=None, reachability_status=None,
                               role=None, role_source=None, serial_number=None, series=None,
                               software_type=None, software_version=None, type=None,
                               up_time=None, vrf_name=None, headers=None,
                               **request_parameters)
```

Gets the list of first 500 network devices sorted lexicographically based on host name. It can be filtered using management IP address, mac address, hostname and location name. If id param is provided, it will be returning the list of network-devices for the given id's and other request params will be ignored. In case of autocomplete request, returns the list of specified attributes. .

Parameters

- **vrf_name** (*basestring*) – vrfName query parameter.
- **management_ip_address** (*basestring*) – managementIpAddress query parameter.
- **hostname** (*basestring*) – hostname query parameter.
- **mac_address** (*basestring*) – macAddress query parameter.
- **family** (*basestring*) – family query parameter.
- **collection_status** (*basestring*) – collectionStatus query parameter.
- **collection_interval** (*basestring*) – collectionInterval query parameter.
- **software_version** (*basestring*) – softwareVersion query parameter.
- **software_type** (*basestring*) – softwareType query parameter.
- **reachability_status** (*basestring*) – reachabilityStatus query parameter.
- **reachability_failure_reason** (*basestring*) – reachabilityFailureReason query parameter.
- **error_code** (*basestring*) – errorCode query parameter.
- **platform_id** (*basestring*) – platformId query parameter.
- **series** (*basestring*) – series query parameter.
- **type** (*basestring*) – type query parameter.
- **serial_number** (*basestring*) – serialNumber query parameter.
- **up_time** (*basestring*) – upTime query parameter.
- **role** (*basestring*) – role query parameter.
- **role_source** (*basestring*) – roleSource query parameter.
- **associated_wlc_ip** (*basestring*) – associatedWlcIp query parameter.
- **offset** (*basestring*) – offset query parameter.
- **limit** (*basestring*) – limit query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_device_role(*id=None, role=None, roleSource=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates the role of the device as access, core, distribution, border router .

Parameters

- **id** (*string*) – Devices's id.
- **role** (*string*) – Devices's role.
- **roleSource** (*string*) – Devices's roleSource.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_polling_interval_for_all_devices(*headers=None, **request_parameters*)

Returns polling interval of all devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_config_for_all_devices(*headers=None, **request_parameters*)

Returns the config for all devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_config_count(*headers=None, **request_parameters*)

Returns the count of device configs .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_count(*headers=None, **request_parameters*)

Returns the count of network devices based on the filter criteria by management IP address, mac address, hostname and location name .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

export_device_list(*deviceUuids=None, id=None, operationEnum=None, parameters=None, password=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Exports the selected network device to a file .

Parameters

- **deviceUuids** (*list*) – Devices's deviceUuids (list of strings).
- **id** (*string*) – Devices's id.
- **operationEnum** (*string*) – Devices's operationEnum. Available values are 'CREDENTIALDETAILS' and 'DEVICEDETAILS'.
- **parameters** (*list*) – Devices's parameters (list of strings).
- **password** (*string*) – Devices's password.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_functional_capability_for_devices(*device_id, function_name=None, headers=None, **request_parameters*)

Returns the functional-capability for given devices .

Parameters

- **device_id** (*basestring*) – deviceId query parameter. Accepts comma separated deviceid's and return list of functional-capabilities for the given id's. If invalid or not-found id's are provided, null entry will be returned in the list. .
- **function_name** (*basestring*, *list*, *set*, *tuple*) – functionName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_functional_capability_by_id(*id*, *headers=None*, ***request_parameters*)

Returns functional capability with given Id .

Parameters

- **id** (*basestring*) – id path parameter. Functional Capability UUID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

inventory_insight_device_link_mismatch(*category*, *site_id*, *limit=None*, *offset=None*, *order=None*, *sort_by=None*, *headers=None*, ***request_parameters*)

Find all devices with link mismatch (speed / vlan) .

Parameters

- **site_id** (*basestring*) – siteId path parameter.
- **offset** (*basestring*) – offset query parameter. Row Number. Default value is 1 .
- **limit** (*basestring*) – limit query parameter. Default value is 500 .

- **category** (*basestring*) – category query parameter. Links mismatch category. Value can be speed-duplex or vlan. .
- **sort_by** (*basestring*) – sortBy query parameter. Sort By .
- **order** (*basestring*) – order query parameter. Order. Value can be asc or desc. Default value is asc .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_devices_with_snmpv3_des(*site_id*, *limit=None*, *offset=None*, *order=None*, *sort_by=None*, *headers=None*, ***request_parameters*)

Returns devices added to DNAC with snmp v3 DES, where siteId is mandatory & accepts offset, limit, sortBy, order which are optional. .

Parameters

- **site_id** (*basestring*) – siteId path parameter.
- **offset** (*basestring*) – offset query parameter. Row Number. Default value is 1 .
- **limit** (*basestring*) – limit query parameter. Default value is 500 .
- **sort_by** (*basestring*) – sortBy query parameter. Sort By .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_network_device_by_ip(*ip_address*, *headers=None*, ***request_parameters*)

Returns the network device by specified IP address .

Parameters

- **ip_address** (*basestring*) – ipAddress path parameter. Device IP address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_modules(*device_id*, *limit=None*, *name_list=None*, *offset=None*, *operational_state_code_list=None*, *part_number_list=None*, *vendor_equipment_type_list=None*, *headers=None*, ***request_parameters*)

Returns modules by specified device id .

Parameters

- **device_id** (*basestring*) – deviceId query parameter.
- **limit** (*basestring*) – limit query parameter.
- **offset** (*basestring*) – offset query parameter.
- **name_list** (*basestring*, *list*, *set*, *tuple*) – nameList query parameter.
- **vendor_equipment_type_list** (*basestring*, *list*, *set*, *tuple*) – vendorEquipmentTypeList query parameter.
- **part_number_list** (*basestring*, *list*, *set*, *tuple*) – partNumberList query parameter.
- **operational_state_code_list** (*basestring*, *list*, *set*, *tuple*) – operationalStateCodeList query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_module_count(*device_id*, *name_list=None*, *operational_state_code_list=None*,
part_number_list=None, *vendor_equipment_type_list=None*, *headers=None*,
***request_parameters*)

Returns Module Count .

Parameters

- **device_id** (*basestring*) – deviceId query parameter.
- **name_list** (*basestring*, *list*, *set*, *tuple*) – nameList query parameter.
- **vendor_equipment_type_list** (*basestring*, *list*, *set*, *tuple*) – vendorEquipmentTypeList query parameter.
- **part_number_list** (*basestring*, *list*, *set*, *tuple*) – partNumberList query parameter.
- **operational_state_code_list** (*basestring*, *list*, *set*, *tuple*) – operationalStateCodeList query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_module_info_by_id(*id*, *headers=None*, ***request_parameters*)

Returns Module info by id .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_by_serial_number(*serial_number*, *headers=None*, ***request_parameters*)

Returns the network device with given serial number .

Parameters

- **serial_number** (*basestring*) – serialNumber path parameter. Device serial number .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sync_devices_using_forcesync(*force_sync=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Synchronizes the devices. If forceSync param is false (default) then the sync would run in normal priority thread. If forceSync param is true then the sync would run in high priority thread if available, else the sync will fail. Result can be seen in the child task of each device .

Parameters

- **force_sync** (*bool*) – forceSync query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

register_device_for_wsa(*macaddress=None, serial_number=None, headers=None, **request_parameters*)

Registers a device for WSA notification .

Parameters

- **serial_number** (*basestring*) – serialNumber query parameter. Serial number of the device .
- **macaddress** (*basestring*) – macaddress query parameter. Mac addres of the device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_chassis_details_for_device(*device_id, headers=None, **request_parameters*)

Returns chassis details for given device ID .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_stack_details_for_device(*device_id, headers=None, **request_parameters*)

Retrieves complete stack details for given device ID .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

return_power_supply_fan_details_for_the_given_device(*device_uuid*, *type*, *headers=None*, ***request_parameters*)

Return PowerSupply/ Fan details for the Given device .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter.
- **type** (*basestring*) – type query parameter. Type value should be PowerSupply or Fan .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

poe_interface_details(*device_uuid*, *interface_name_list=None*, *headers=None*, ***request_parameters*)

Returns POE interface details for the device, where deviceuuid is mandatory & accepts comma separated interface names which is optional and returns information for that particular interfaces where(operStatus = operationalStatus) .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. uuid of the device .
- **interface_name_list** (*basestring*) – interfaceNameList query parameter. comma separated interface names .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_linecard_details(*device_uuid*, *headers=None*, ***request_parameters*)

Get line card detail for a given deviceuuid. Response will contain serial no, part no, switch no and slot no.

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. instanceuuid of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

poe_details_(*device_uuid*, *headers=None*, ***request_parameters*)

Returns POE details for device. .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. uuid of the device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

poe_details(*device_uuid*, *headers=None*, ***request_parameters*)

Returns POE details for device. .

Parameters

- **device_uuid** (*basestring*) – deviceId path parameter. uuid of the device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_supervisor_card_detail(*device_uuid*, *headers=None*, ***request_parameters*)

Get supervisor card detail for a given deviceId. Response will contain serial no, part no, switch no and slot no. .

Parameters

- **device_uuid** (*basestring*) – deviceId path parameter. instanceid of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_by_id(*id*, *headers=None*, ***request_parameters*)

Returns the network device details for the given device ID .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_device_by_id(*id*, *is_force_delete=None*, *headers=None*, ****request_parameters**)

Deletes the network device for the given Id .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **is_force_delete** (*bool*) – isForceDelete query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_summary(*id*, *headers=None*, ****request_parameters**)

Returns brief summary of device info such as hostname, management IP address for the given device Id .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_polling_interval_by_id(*id*, *headers=None*, ***request_parameters*)

Returns polling interval by device id .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_organization_list_for_meraki(*id*, *headers=None*, ***request_parameters*)

Returns list of organizations for meraki dashboard .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_interface_vlans(*id*, *interface_type=None*, *headers=None*, ***request_parameters*)

Returns Device Interface VLANs .

Parameters

- **id** (*basestring*) – id path parameter.
- **interface_type** (*basestring*) – interfaceType query parameter. Vlan associated with sub-interface .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_wireless_lan_controller_details_by_id(*id*, *headers=None*, ***request_parameters*)

Returns the wireless lan controller info with given device ID .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_config_by_id(*network_device_id*, *headers=None*, ***request_parameters*)

Returns the device config by specified device ID .

Parameters

- **network_device_id** (*basestring*) – networkDeviceId path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_network_device_by_pagination_range(*records_to_return, start_index, headers=None, **request_parameters*)

Returns the list of network devices for the given pagination range .

Parameters

- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

threat_details(*endTime=None, isNewThreat=None, limit=None, offset=None, siteId=None, startTime=None, threatLevel=None, threatType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

The details for the Rogue and aWIPS threats .

Parameters

- **endTime** (*integer*) – Devices's End Time.
- **isNewThreat** (*boolean*) – Devices's Is New Threat.
- **limit** (*integer*) – Devices's Limit.
- **offset** (*integer*) – Devices's Offset.
- **siteId** (*list*) – Devices's Site Id (list of strings).
- **startTime** (*integer*) – Devices's Start Time.
- **threatLevel** (*list*) – Devices's Threat Level (list of strings).

- **threatType** (*list*) – Devices’s Threat Type (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

threat_detail_count(*endTime=None, isNewThreat=None, limit=None, offset=None, siteId=None, startTime=None, threatLevel=None, threatType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

The details count for the Rogue and aWIPS threats .

Parameters

- **endTime** (*integer*) – Devices’s End Time.
- **isNewThreat** (*boolean*) – Devices’s Is New Threat.
- **limit** (*integer*) – Devices’s Limit.
- **offset** (*integer*) – Devices’s Offset.
- **siteId** (*list*) – Devices’s Site Id (list of strings).
- **startTime** (*integer*) – Devices’s Start Time.
- **threatLevel** (*list*) – Devices’s Threat Level (list of strings).
- **threatType** (*list*) – Devices’s Threat Type (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

threat_summary(*endTime=None, siteId=None, startTime=None, threatLevel=None, threatType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

The Threat Summary for the Rogues and aWIPS .

Parameters

- **endTime** (*integer*) – Devices's End Time.
- **siteId** (*list*) – Devices's Site Id (list of strings).
- **startTime** (*integer*) – Devices's Start Time.
- **threatLevel** (*list*) – Devices's Threat Level (list of strings).
- **threatType** (*list*) – Devices's Threat Type (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

discovery

class Discovery

Cisco DNA Center Discovery API (version: 2.2.2.3).

Wraps the DNA Center Discovery API and exposes the API as native Python methods that return native Python objects.

delete_all_discovery(*headers=None, **request_parameters*)

Stops all the discoveries and removes them .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
updates_discovery_by_id(attributeInfo=None, cdpLevel=None, deviceIds=None,
    discoveryCondition=None, discoveryStatus=None, discoveryType=None,
    enablePasswordList=None, globalCredentialIdList=None,
    httpReadCredential=None, httpWriteCredential=None, id=None,
    ipAddressList=None, ipFilterList=None, isAutoCdp=None, lldpLevel=None,
    name=None, netconfPort=None, numDevices=None, parentDiscoveryId=None,
    passwordList=None, preferredMgmtIPMethod=None, protocolOrder=None,
    retryCount=None, snmpAuthPassphrase=None, snmpAuthProtocol=None,
    snmpMode=None, snmpPrivPassphrase=None, snmpPrivProtocol=None,
    snmpRoCommunity=None, snmpRoCommunityDesc=None,
    snmpRwCommunity=None, snmpRwCommunityDesc=None,
    snmpUserName=None, timeOut=None, updateMgmtIp=None,
    userNameList=None, headers=None, payload=None, active_validation=True,
    **request_parameters)
```

Stops or starts an existing discovery .

Parameters

- **attributeInfo** (*object*) – Discovery's attributeInfo.
- **cdpLevel** (*integer*) – Discovery's cdpLevel.
- **deviceIds** (*string*) – Discovery's deviceIds.
- **discoveryCondition** (*string*) – Discovery's discoveryCondition.
- **discoveryStatus** (*string*) – Discovery's discoveryStatus.
- **discoveryType** (*string*) – Discovery's discoveryType.
- **enablePasswordList** (*string*) – Discovery's enablePasswordList.
- **globalCredentialIdList** (*list*) – Discovery's globalCredentialIdList (list of strings).
- **httpReadCredential** (*object*) – Discovery's httpReadCredential.
- **httpWriteCredential** (*object*) – Discovery's httpWriteCredential.
- **id** (*string*) – Discovery's id.
- **ipAddressList** (*string*) – Discovery's ipAddressList.
- **ipFilterList** (*string*) – Discovery's ipFilterList.
- **isAutoCdp** (*boolean*) – Discovery's isAutoCdp.
- **lldpLevel** (*integer*) – Discovery's lldpLevel.
- **name** (*string*) – Discovery's name.
- **netconfPort** (*string*) – Discovery's netconfPort.

- **numDevices** (*integer*) – Discovery’s numDevices.
- **parentDiscoveryId** (*string*) – Discovery’s parentDiscoveryId.
- **passwordList** (*string*) – Discovery’s passwordList.
- **preferredMgmtIPMethod** (*string*) – Discovery’s preferredMgmtIPMethod.
- **protocolOrder** (*string*) – Discovery’s protocolOrder.
- **retryCount** (*integer*) – Discovery’s retryCount.
- **snmpAuthPassphrase** (*string*) – Discovery’s snmpAuthPassphrase.
- **snmpAuthProtocol** (*string*) – Discovery’s snmpAuthProtocol.
- **snmpMode** (*string*) – Discovery’s snmpMode.
- **snmpPrivPassphrase** (*string*) – Discovery’s snmpPrivPassphrase.
- **snmpPrivProtocol** (*string*) – Discovery’s snmpPrivProtocol.
- **snmpRoCommunity** (*string*) – Discovery’s snmpRoCommunity.
- **snmpRoCommunityDesc** (*string*) – Discovery’s snmpRoCommunityDesc.
- **snmpRwCommunity** (*string*) – Discovery’s snmpRwCommunity.
- **snmpRwCommunityDesc** (*string*) – Discovery’s snmpRwCommunityDesc.
- **snmpUserName** (*string*) – Discovery’s snmpUserName.
- **timeOut** (*integer*) – Discovery’s timeOut.
- **updateMgmtIp** (*boolean*) – Discovery’s updateMgmtIp.
- **userNameList** (*string*) – Discovery’s userNameList.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
start_discovery(cdpLevel=None, discoveryType=None, enablePasswordList=None,
                 globalCredentialIdList=None, httpReadCredential=None, httpWriteCredential=None,
                 ipAddressList=None, ipFilterList=None, lldpLevel=None, name=None,
                 netconfPort=None, passwordList=None, preferredMgmtIPMethod=None,
                 protocolOrder=None, retry=None, snmpAuthPassphrase=None,
                 snmpAuthProtocol=None, snmpMode=None, snmpPrivPassphrase=None,
                 snmpPrivProtocol=None, snmpROCommunity=None, snmpROCommunityDesc=None,

                 snmpVersion=None, timeout=None, userNameList=None, headers=None, payload=None,
                 active_validation=True, **request_parameters)
```

Initiates discovery with the given parameters .

Parameters

- **cdpLevel** (*integer*) – Discovery’s CDP level to which neighbor devices to be discovered .
- **discoveryType** (*string*) – Discovery’s Type of Discovery. ‘SINGLE’, ‘RANGE’, ‘MULTI RANGE’, ‘CDP’, ‘LLDP’ .
- **enablePasswordList** (*list*) – Discovery’s Enable Password of the devices to be discovered (list of strings).
- **globalCredentialIdList** (*list*) – Discovery’s Global Credential Ids to be used for discovery (list of strings).
- **httpReadCredential** (*object*) – Discovery’s httpReadCredential.
- **httpWriteCredential** (*object*) – Discovery’s httpWriteCredential.
- **ipAddressList** (*string*) – Discovery’s IP Address of devices to be discovered. Ex: ‘172.30.0.1’ for SINGLE, CDP and LLDP; ‘72.30.0.1-172.30.0.4’ for RANGE; ‘72.30.0.1-172.30.0.4,172.31.0.1-172.31.0.4’ for MULTI RANGE .
- **ipFilterList** (*list*) – Discovery’s IP Addresses of the devices to be filtered out during discovery (list of strings).
- **lldpLevel** (*integer*) – Discovery’s LLDP level to which neighbor devices to be discovered .
- **name** (*string*) – Discovery’s Name of the discovery .
- **netconfPort** (*string*) – Discovery’s Netconf Port. It will need valid SSH credentials to work .
- **passwordList** (*list*) – Discovery’s Password of the devices to be discovered (list of strings).
- **preferredMgmtIPMethod** (*string*) – Discovery’s Preferred Management IP Method. ‘None’ or ‘UseLoopBack’. Default is ‘None’ .
- **protocolOrder** (*string*) – Discovery’s Order of protocol (ssh/telnet) in which device connection will be tried. Ex: ‘telnet’: only telnet; ‘ssh,telnet’: ssh with higher order than telnet .
- **retry** (*integer*) – Discovery’s Number of times to try establishing connection to device .
- **snmpAuthPassphrase** (*string*) – Discovery’s Auth Pass phrase for SNMP .
- **snmpAuthProtocol** (*string*) – Discovery’s SNMP auth protocol. SHA’ or ‘MD5’ .

- **snmpMode** (*string*) – Discovery’s Mode of SNMP. ‘AUTHPRIV’ or ‘AUTHNOPRIV’ or ‘NOAUTHNOPRIV’ .
- **snmpPrivPassphrase** (*string*) – Discovery’s Pass phrase for SNMP privacy .
- **snmpPrivProtocol** (*string*) – Discovery’s SNMP privacy protocol. ‘DES’ or ‘AES128’ .
- **snmpROCommunity** (*string*) – Discovery’s Snmp RO community of the devices to be discovered .
- **snmpROCommunityDesc** (*string*) – Discovery’s Description for Snmp RO community .
- **snmpRWCommunity** (*string*) – Discovery’s Snmp RW community of the devices to be discovered .
- **snmpRWCommunityDesc** (*string*) – Discovery’s Description for Snmp RW community .
- **snmpUserName** (*string*) – Discovery’s SNMP username of the device .
- **snmpVersion** (*string*) – Discovery’s Version of SNMP. v2 or v3 .
- **timeout** (*integer*) – Discovery’s Time to wait for device response in seconds .
- **userNameList** (*list*) – Discovery’s Username of the devices to be discovered (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_count_of_all_discovery_jobs(*headers=None, **request_parameters*)

Returns the count of all available discovery jobs .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_discovery_jobs_by_ip(*ip_address*, *limit=None*, *name=None*, *offset=None*, *headers=None*,
***request_parameters*)

Returns the list of discovery jobs for the given IP .

Parameters

- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **ip_address** (*basestring*) – ipAddress query parameter.
- **name** (*basestring*) – name query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_discovery_by_id(*id*, *headers=None*, ***request_parameters*)

Stops the discovery for the given Discovery ID and removes it. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_discovery_by_id(*id*, *headers=None*, ***request_parameters*)

Returns discovery by Discovery ID. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_list_of_discoveries_by_discovery_id(*id*, *ip_address=None*, *limit=None*, *offset=None*, *headers=None*, ***request_parameters*)

Returns the list of discovery jobs for the given Discovery ID. The results can be optionally filtered based on IP. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **ip_address** (*basestring*) – ipAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_discovered_network_devices_by_discovery_id(*id*, *task_id*=None, *headers*=None, ***request_parameters*)

Returns the network devices discovered for the given Discovery ID. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **task_id** (*basestring*) – taskId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_devices_discovered_by_id(*id*, *task_id*=None, *headers*=None, ***request_parameters*)

Returns the count of network devices discovered in the given discovery. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **task_id** (*basestring*) – taskId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_discovered_devices_by_range(*id*, *records_to_return*, *start_index*, *task_id*=None, *headers*=None, ***request_parameters*)

Returns the network devices discovered for the given discovery and for the given range. The maximum

number of records that can be retrieved is 500. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **task_id** (*basestring*) – taskId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_network_devices_from_discovery(*id, cli_status=None, http_status=None, ip_address=None, netconf_status=None, ping_status=None, snmp_status=None, sort_by=None, sort_order=None, task_id=None, headers=None, **request_parameters*)

Returns the network devices from a discovery job based on given filters. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **task_id** (*basestring*) – taskId query parameter.
- **sort_by** (*basestring*) – sortBy query parameter.
- **sort_order** (*basestring*) – sortOrder query parameter.
- **ip_address** (*basestring, list, set, tuple*) – ipAddress query parameter.
- **ping_status** (*basestring, list, set, tuple*) – pingStatus query parameter.
- **snmp_status** (*basestring, list, set, tuple*) – snmpStatus query parameter.
- **cli_status** (*basestring, list, set, tuple*) – cliStatus query parameter.
- **netconf_status** (*basestring, list, set, tuple*) – netconfStatus query parameter.
- **http_status** (*basestring, list, set, tuple*) – httpStatus query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_discovery_by_specified_range(*records_to_delete*, *start_index*, *headers=None*,
***request_parameters*)

Stops discovery for the given range and removes them .

Parameters

- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_delete** (*int*) – recordsToDelete path parameter. Number of records to delete .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_discoveries_by_range(*records_to_return*, *start_index*, *headers=None*, ***request_parameters*)

Returns the discovery by specified range .

Parameters

- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_global_credentials(*credential_sub_type*, *order=None*, *sort_by=None*, *headers=None*, ***request_parameters*)

Returns global credential for the given credential sub type .

Parameters

- **credential_sub_type** (*basestring*) – credentialSubType query parameter. Credential type as CLI / SNMPV2_READ_COMMUNITY / SNMPV2_WRITE_COMMUNITY / SNMPV3 / HTTP_WRITE / HTTP_READ / NETCONF .
- **sort_by** (*basestring*) – sortBy query parameter.
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_cli_credentials(*comments=None*, *credentialType=None*, *description=None*, *enablePassword=None*, *id=None*, *instanceTenantId=None*, *instanceUuid=None*, *password=None*, *username=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Updates global CLI credentials .

Parameters

- **comments** (*string*) – Discovery's comments.
- **credentialType** (*string*) – Discovery's credentialType. Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's description.
- **enablePassword** (*string*) – Discovery's enablePassword.

- **id** (*string*) – Discovery’s id.
- **instanceTenantId** (*string*) – Discovery’s instanceTenantId.
- **instanceUuid** (*string*) – Discovery’s instanceUuid.
- **password** (*string*) – Discovery’s password.
- **username** (*string*) – Discovery’s username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_cli_credentials(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global CLI credential .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_http_read_credentials(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds HTTP read credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_http_read_credential(*comments=None, credentialType=None, description=None, id=None, instanceTenantId=None, instanceUuid=None, password=None, port=None, secure=None, username=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates global HTTP Read credential .

Parameters

- **comments** (*string*) – Discovery's comments.
- **credentialType** (*string*) – Discovery's credentialType. Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's description.
- **id** (*string*) – Discovery's id.
- **instanceTenantId** (*string*) – Discovery's instanceTenantId.
- **instanceUuid** (*string*) – Discovery's instanceUuid.
- **password** (*string*) – Discovery's password.
- **port** (*integer*) – Discovery's port.
- **secure** (*boolean*) – Discovery's secure.
- **username** (*string*) – Discovery's username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_http_write_credentials(*comments=None, credentialType=None, description=None, id=None, instanceTenantId=None, instanceUuid=None, password=None, port=None, secure=None, username=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates global HTTP write credentials .

Parameters

- **comments** (*string*) – Discovery’s comments.
- **credentialType** (*string*) – Discovery’s credentialType. Available values are ‘GLOBAL’ and ‘APP’.
- **description** (*string*) – Discovery’s description.
- **id** (*string*) – Discovery’s id.
- **instanceTenantId** (*string*) – Discovery’s instanceTenantId.
- **instanceUuid** (*string*) – Discovery’s instanceUuid.
- **password** (*string*) – Discovery’s password.
- **port** (*integer*) – Discovery’s port.
- **secure** (*boolean*) – Discovery’s secure.
- **username** (*string*) – Discovery’s username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_http_write_credentials(headers=None, payload=None, active_validation=True,  
                               **request_parameters)
```

Adds global HTTP write credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_netconf_credentials(comments=None, credentialType=None, description=None, id=None,  
                            instanceTenantId=None, instanceUuid=None, netconfPort=None,  
                            headers=None, payload=None, active_validation=True,  
                            **request_parameters)
```

Updates global netconf credentials .

Parameters

- **comments** (*string*) – Discovery's comments.
- **credentialType** (*string*) – Discovery's credentialType. Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's description.
- **id** (*string*) – Discovery's id.
- **instanceTenantId** (*string*) – Discovery's instanceTenantId.
- **instanceUuid** (*string*) – Discovery's instanceUuid.
- **netconfPort** (*string*) – Discovery's netconfPort.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_netconf_credentials(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global netconf credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_snmp_read_community(*comments=None, credentialType=None, description=None, id=None, instanceTenantId=None, instanceUuid=None, readCommunity=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates global SNMP read community .

Parameters

- **comments** (*string*) – Discovery's comments.
- **credentialType** (*string*) – Discovery's credentialType. Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's description.
- **id** (*string*) – Discovery's id.
- **instanceTenantId** (*string*) – Discovery's instanceTenantId.
- **instanceUuid** (*string*) – Discovery's instanceUuid.
- **readCommunity** (*string*) – Discovery's readCommunity.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.

- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_snmp_read_community(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global SNMP read community .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_snmp_write_community(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global SNMP write community .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_snmp_write_community(comments=None, credentialType=None, description=None, id=None,  
                             instanceTenantId=None, instanceUuid=None, writeCommunity=None,  
                             headers=None, payload=None, active_validation=True,  
                             **request_parameters)
```

Updates global SNMP write community .

Parameters

- **comments** (*string*) – Discovery's comments.
- **credentialType** (*string*) – Discovery's credentialType. Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's description.
- **id** (*string*) – Discovery's id.
- **instanceTenantId** (*string*) – Discovery's instanceTenantId.
- **instanceUuid** (*string*) – Discovery's instanceUuid.
- **writeCommunity** (*string*) – Discovery's writeCommunity.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_snmpv3_credentials(authPassword=None, authType=None, comments=None,  
                           credentialType=None, description=None, id=None, instanceTenantId=None,  
                           instanceUuid=None, privacyPassword=None, privacyType=None,  
                           snmpMode=None, username=None, headers=None, payload=None,  
                           active_validation=True, **request_parameters)
```

Updates global SNMPv3 credential .

Parameters

- **authPassword** (*string*) – Discovery’s authPassword.
- **authType** (*string*) – Discovery’s authType. Available values are ‘SHA’ and ‘MD5’.
- **comments** (*string*) – Discovery’s comments.
- **credentialType** (*string*) – Discovery’s credentialType. Available values are ‘GLOBAL’ and ‘APP’.
- **description** (*string*) – Discovery’s description.
- **id** (*string*) – Discovery’s id.
- **instanceTenantId** (*string*) – Discovery’s instanceTenantId.
- **instanceUuid** (*string*) – Discovery’s instanceUuid.
- **privacyPassword** (*string*) – Discovery’s privacyPassword.
- **privacyType** (*string*) – Discovery’s privacyType. Available values are ‘DES’ and ‘AES128’.
- **snmpMode** (*string*) – Discovery’s snmpMode. Available values are ‘AUTHPRIV’, ‘AUTHNOPRIV’ and ‘NOAUTHNOPRIV’.
- **username** (*string*) – Discovery’s username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_snmpv3_credentials(headers=None, payload=None, active_validation=True,
                          **request_parameters)
```

Adds global SNMPv3 credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_global_credentials_by_id(*global_credential_id*, *headers=None*, ***request_parameters*)

Deletes global credential for the given ID .

Parameters

- **global_credential_id** (*basestring*) – globalCredentialId path parameter. ID of global-credential .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_global_credentials(*global_credential_id*, *siteUuids=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Update global credential for network devices in site(s) .

Parameters

- **siteUuids** (*list*) – Discovery's siteUuids (list of strings).
- **global_credential_id** (*basestring*) – globalCredentialId path parameter. Global credential Uuid .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_credential_sub_type_by_credential_id(*id*, *headers=None*, ***request_parameters*)

Returns the credential sub type for the given Id .

Parameters

- **id** (*basestring*) – id path parameter. Global Credential ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_snmp_properties(*headers=None*, ***request_parameters*)

Returns SNMP properties .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_update_snmp_properties(headers=None, payload=None, active_validation=True,  
                               **request_parameters)
```

Adds SNMP properties .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

event_management

class EventManagement

Cisco DNA Center Event Management API (version: 2.2.2.3).

Wraps the DNA Center Event Management API and exposes the API as native Python methods that return native Python objects.

```
get_auditlog_parent_records(category=None, context=None, description=None, device_id=None,  
                             domain=None, end_time=None, event_hierarchy=None, event_id=None,  
                             instance_id=None, is_system_events=None, limit=None, name=None,  
                             offset=None, order=None, severity=None, site_id=None, sort_by=None,  
                             source=None, start_time=None, sub_domain=None, user_id=None,  
                             headers=None, **request_parameters)
```

Get Parent Audit Log Event instances from the Event-Hub .

Parameters

- **instance_id** (*basestring*) – instanceId query parameter. InstanceID of the Audit Log. .
- **name** (*basestring*) – name query parameter. Audit Log notification event name. .
- **event_id** (*basestring*) – eventId query parameter. Audit Log notification's event ID. .
- **category** (*basestring*) – category query parameter. Audit Log notification's event category. Supported values: INFO, WARN, ERROR, ALERT, TASK_PROGRESS, TASK_FAILURE, TASK_COMPLETE, COMMAND, QUERY, CONVERSATION .
- **severity** (*basestring*) – severity query parameter. Audit Log notification's event severity. Supported values: 1, 2, 3, 4, 5. .

- **domain** (*basestring*) – domain query parameter. Audit Log notification’s event domain. .
- **sub_domain** (*basestring*) – subDomain query parameter. Audit Log notification’s event sub-domain. .
- **source** (*basestring*) – source query parameter. Audit Log notification’s event source. .
- **user_id** (*basestring*) – userId query parameter. Audit Log notification’s event userId. .
- **context** (*basestring*) – context query parameter. Audit Log notification’s event correlationId. .
- **event_hierarchy** (*basestring*) – eventHierarchy query parameter. Audit Log notification’s event eventHierarchy. Example: “US.CA.San Jose” OR “US.CA” OR “CA.San Jose” Delimiter for hierarchy separation is “.”. .
- **site_id** (*basestring*) – siteId query parameter. Audit Log notification’s siteId. .
- **device_id** (*basestring*) – deviceId query parameter. Audit Log notification’s deviceId. .
- **is_system_events** (*bool*) – isSystemEvents query parameter. Parameter to filter system generated audit-logs. .
- **description** (*basestring*) – description query parameter. String full/partial search (Provided input string is case insensitively matched for records). .
- **offset** (*int*) – offset query parameter. Position of a particular Audit Log record in the data. .
- **limit** (*int*) – limit query parameter. Number of Audit Log records to be returned per page. .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds since Epoch Eg. 1597950637211 (when provided endTime is mandatory) .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds since Epoch Eg. 1597961437211 (when provided startTime is mandatory) .
- **sort_by** (*basestring*) – sortBy query parameter. Sort the Audit Logs by certain fields. Supported values are event notification header attributes. .
- **order** (*basestring*) – order query parameter. Order of the sorted Audit Log records. Default value is desc by timestamp. Supported values: asc, desc. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

```
get_auditlog_summary(category=None, context=None, description=None, device_id=None,  
                      domain=None, end_time=None, event_hierarchy=None, event_id=None,  
                      instance_id=None, is_parent_only=None, is_system_events=None, name=None,  
                      parent_instance_id=None, severity=None, site_id=None, source=None,  
                      start_time=None, sub_domain=None, user_id=None, headers=None,  
                      **request_parameters)
```

Get Audit Log Summary from the Event-Hub .

Parameters

- **parent_instance_id** (*basestring*) – parentInstanceId query parameter. Parent Audit Log record's instanceID. .
- **is_parent_only** (*bool*) – isParentOnly query parameter. Parameter to filter parent only audit-logs. .
- **instance_id** (*basestring*) – instanceId query parameter. InstanceID of the Audit Log. .
- **name** (*basestring*) – name query parameter. Audit Log notification event name. .
- **event_id** (*basestring*) – eventId query parameter. Audit Log notification's event ID. .
- **category** (*basestring*) – category query parameter. Audit Log notification's event category. Supported values: INFO, WARN, ERROR, ALERT, TASK_PROGRESS, TASK_FAILURE, TASK_COMPLETE, COMMAND, QUERY, CONVERSATION .
- **severity** (*basestring*) – severity query parameter. Audit Log notification's event severity. Supported values: 1, 2, 3, 4, 5. .
- **domain** (*basestring*) – domain query parameter. Audit Log notification's event domain. .
- **sub_domain** (*basestring*) – subDomain query parameter. Audit Log notification's event sub-domain. .
- **source** (*basestring*) – source query parameter. Audit Log notification's event source. .
- **user_id** (*basestring*) – userId query parameter. Audit Log notification's event userId. .
- **context** (*basestring*) – context query parameter. Audit Log notification's event correlationId. .
- **event_hierarchy** (*basestring*) – eventHierarchy query parameter. Audit Log notification's event eventHierarchy. Example: "US.CA.San Jose" OR "US.CA" OR "CA.San Jose" Delimiter for hierarchy separation is ".". .
- **site_id** (*basestring*) – siteId query parameter. Audit Log notification's siteId. .
- **device_id** (*basestring*) – deviceId query parameter. Audit Log notification's deviceId. .
- **is_system_events** (*bool*) – isSystemEvents query parameter. Parameter to filter system generated audit-logs. .
- **description** (*basestring*) – description query parameter. String full/partial search (Provided input string is case insensitively matched for records). .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds since Epoch Eg. 1597950637211 (when provided endTime is mandatory) .

- **end_time** (*int*) – endTime query parameter. End Time in milliseconds since Epoch Eg. 1597961437211 (when provided startTime is mandatory) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_auditlog_records(*category=None, context=None, description=None, device_id=None, domain=None, end_time=None, event_hierarchy=None, event_id=None, instance_id=None, is_system_events=None, limit=None, name=None, offset=None, order=None, parent_instance_id=None, severity=None, site_id=None, sort_by=None, source=None, start_time=None, sub_domain=None, user_id=None, headers=None, **request_parameters*)

Get Audit Log Event instances from the Event-Hub .

Parameters

- **parent_instance_id** (*basestring*) – parentId query parameter. Parent Audit Log record's instanceID. .
- **instance_id** (*basestring*) – instanceId query parameter. InstanceID of the Audit Log. .
- **name** (*basestring*) – name query parameter. Audit Log notification event name. .
- **event_id** (*basestring*) – eventId query parameter. Audit Log notification's event ID. .
- **category** (*basestring*) – category query parameter. Audit Log notification's event category. Supported values: INFO, WARN, ERROR, ALERT, TASK_PROGRESS, TASK_FAILURE, TASK_COMPLETE, COMMAND, QUERY, CONVERSATION .
- **severity** (*basestring*) – severity query parameter. Audit Log notification's event severity. Supported values: 1, 2, 3, 4, 5. .
- **domain** (*basestring*) – domain query parameter. Audit Log notification's event domain. .
- **sub_domain** (*basestring*) – subDomain query parameter. Audit Log notification's event sub-domain. .
- **source** (*basestring*) – source query parameter. Audit Log notification's event source. .
- **user_id** (*basestring*) – userId query parameter. Audit Log notification's event userId. .
- **context** (*basestring*) – context query parameter. Audit Log notification's event correlationId. .

- **event_hierarchy** (*basestring*) – eventHierarchy query parameter. Audit Log notification's event eventHierarchy. Example: "US.CA.San Jose" OR "US.CA" OR "CA.San Jose" Delimiter for hierarchy separation is ".". .
- **site_id** (*basestring*) – siteId query parameter. Audit Log notification's siteId. .
- **device_id** (*basestring*) – deviceId query parameter. Audit Log notification's deviceId. .
- **is_system_events** (*bool*) – isSystemEvents query parameter. Parameter to filter system generated audit-logs. .
- **description** (*basestring*) – description query parameter. String full/partial search (Provided input string is case insensitively matched for records). .
- **offset** (*int*) – offset query parameter. Position of a particular Audit Log record in the data. .
- **limit** (*int*) – limit query parameter. Number of Audit Log records to be returned per page. .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds since Epoch Eg. 1597950637211 (when provided endTime is mandatory) .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds since Epoch Eg. 1597961437211 (when provided startTime is mandatory) .
- **sort_by** (*basestring*) – sortBy query parameter. Sort the Audit Logs by certain fields. Supported values are event notification header attributes. .
- **order** (*basestring*) – order query parameter. Order of the sorted Audit Log records. Default value is desc by timestamp. Supported values: asc, desc. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_status_api_for_events(*execution_id*, *headers=None*, ***request_parameters*)

Get the Status of events API calls with provided executionId as mandatory path parameter .

Parameters

- **execution_id** (*basestring*) – executionId path parameter. Execution ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_notifications(*category=None, domain=None, end_time=None, event_ids=None, limit=None, offset=None, order=None, severity=None, sort_by=None, source=None, start_time=None, sub_domain=None, type=None, headers=None, **request_parameters*)

Get the list of Published Notifications .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. The registered EventId should be provided .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds .
- **category** (*basestring*) – category query parameter.
- **type** (*basestring*) – type query parameter.
- **severity** (*basestring*) – severity query parameter.
- **domain** (*basestring*) – domain query parameter.
- **sub_domain** (*basestring*) – subDomain query parameter. Sub Domain .
- **source** (*basestring*) – source query parameter.
- **offset** (*int*) – offset query parameter. Start Offset .
- **limit** (*int*) – limit query parameter. # of records .
- **sort_by** (*basestring*) – sortBy query parameter. Sort By column .
- **order** (*basestring*) – order query parameter. Ascending/Descending order [asc/desc] .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

count_of_notifications(*category=None, domain=None, end_time=None, event_ids=None, severity=None, source=None, start_time=None, sub_domain=None, type=None, headers=None, **request_parameters*)

Get the Count of Published Notifications .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. The registered EventId should be provided .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds .
- **category** (*basestring*) – category query parameter.
- **type** (*basestring*) – type query parameter.
- **severity** (*basestring*) – severity query parameter.
- **domain** (*basestring*) – domain query parameter.
- **sub_domain** (*basestring*) – subDomain query parameter. Sub Domain .
- **source** (*basestring*) – source query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_event_subscriptions(*event_ids=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of Subscriptions's based on provided offset and limit .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of subscriptions related to the respective eventId .
- **offset** (*int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_event_subscriptions(*subscriptions*, *headers=None*, ***request_parameters*)

Delete EventSubscriptions .

Parameters

- **subscriptions** (*basestring*) – subscriptions query parameter. List of EventSubscriptionId's for removal .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_event_subscriptions(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Update SubscriptionEndpoint to list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_event_subscriptions(*headers=None, payload=None, active_validation=True, **request_parameters*)

Subscribe SubscriptionEndpoint to list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_email_subscription_details(*connector_type, instance_id=None, name=None, headers=None, **request_parameters*)

Gets the list of subscription details for specified connectorType .

Parameters

- **connector_type** (*basestring*) – connectorType query parameter. Connector Type [EMAIL] .
- **name** (*basestring*) – name query parameter. Name of the specific configuration .
- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the specific configuration .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type*list*

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_rest_webhook_subscription_details(*connector_type*, *instance_id=None*, *name=None*,
headers=None, ***request_parameters*)

Gets the list of subscription details for specified connectorType .

Parameters

- **connector_type** (*basestring*) – connectorType query parameter. Connector Type [REST] .
- **name** (*basestring*) – name query parameter. Name of the specific configuration .
- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the specific configuration .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_syslog_subscription_details(*connector_type*, *instance_id=None*, *name=None*, *headers=None*,
***request_parameters*)

Gets the list of subscription details for specified connectorType .

Parameters

- **connector_type** (*basestring*) – connectorType query parameter. Connector Type [SYSLOG] .
- **name** (*basestring*) – name query parameter. Name of the specific configuration .
- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the specific configuration .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type*list***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

count_of_event_subscriptions(*event_ids*, *headers=None*, ***request_parameters*)

Returns the Count of EventSubscriptions .

Parameters

- **event_ids** (*basestring*) – eventIds query parameter. List of subscriptions related to the respective eventIds .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_email_event_subscription(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Create Email Subscription Endpoint for list of registered events. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

update_email_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update Email Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_email_event_subscriptions(*event_ids=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of email Subscriptions's based on provided offset and limit .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of email subscriptions related to the respective eventIds (Comma separated event ids) .
- **offset** (*int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_rest_webhook_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create Rest/Webhook Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_rest_webhook_event_subscriptions(*event_ids=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of Rest/Webhook Subscriptions's based on provided offset and limit .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of subscriptions related to the respective eventIds (Comma separated event ids) .
- **offset** (*int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_rest_webhook_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update Rest/Webhook Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_syslog_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update Syslog Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_syslog_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create Syslog Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_syslog_event_subscriptions(*event_ids=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of Syslog Subscriptions's based on provided offset and limit .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of subscriptions related to the respective eventIds (Comma separated event ids) .
- **offset** (*int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_events(tags, event_id=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters)

Gets the list of registered Events with provided eventIds or tags as mandatory .

Parameters

- **event_id** (basestring) – eventId query parameter. The registered EventId should be provided .
- **tags** (basestring) – tags query parameter. The registered Tags should be provided .
- **offset** (int) – offset query parameter. The number of Registries to offset in the resultset whose default value 0 .
- **limit** (int) – limit query parameter. The number of Registries to limit in the resultset whose default value 10 .
- **sort_by** (basestring) – sortBy query parameter. SortBy field name .
- **order** (basestring) – order query parameter.
- **headers** (dict) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

count_of_events(tags, event_id=None, headers=None, **request_parameters)

Get the count of registered events with provided eventIds or tags as mandatory .

Parameters

- **event_id** (basestring) – eventId query parameter. The registered EventId should be provided .
- **tags** (basestring) – tags query parameter. The registered Tags should be provided .
- **headers** (dict) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_eventartifacts(*event_ids=None, limit=None, offset=None, order=None, search=None, sort_by=None, tags=None, headers=None, **request_parameters*)

Gets the list of artifacts based on provided offset and limit .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of eventIds .
- **tags** (*basestring*) – tags query parameter. Tags defined .
- **offset** (*int*) – offset query parameter. Record start offset .
- **limit** (*int*) – limit query parameter. # of records to return in result set .
- **sort_by** (*basestring*) – sortBy query parameter. Sort by field .
- **order** (*basestring*) – order query parameter. sorting order (asc/desc) .
- **search** (*basestring*) – search query parameter. find matches in name, description, eventId, type, category .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

eventartifact_count(*headers=None, **request_parameters*)

Get the count of registered event artifacts with provided eventIds or tags as mandatory .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- *MalformedRequest* – If the request body created is invalid.
- *ApiError* – If the DNA Center cloud returns an error.

file

class File

Cisco DNA Center File API (version: 2.2.2.3).

Wraps the DNA Center File API and exposes the API as native Python methods that return native Python objects.

get_list_of_available_namespaces(*headers=None, **request_parameters*)

Returns list of available namespaces .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- *TypeError* – If the parameter types are incorrect.
- *MalformedRequest* – If the request body created is invalid.
- *ApiError* – If the DNA Center cloud returns an error.

get_list_of_files(*name_space, headers=None, **request_parameters*)

Returns list of files under a specific namespace .

Parameters

- **name_space** (*basestring*) – nameSpace path parameter. A listing of fileId's .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- *TypeError* – If the parameter types are incorrect.
- *MalformedRequest* – If the request body created is invalid.
- *ApiError* – If the DNA Center cloud returns an error.

```
download_a_file_by_fileid(file_id, dirpath=None, save_file=None, filename=None, headers=None,  
                           **request_parameters)
```

Downloads a file specified by fileId .

Parameters

- **file_id** (*basestring*) – fileId path parameter. File Identification number .
- **dirpath** (*basestring*) – Directory absolute path. Defaults to os.getcwd().
- **save_file** (*bool*) – Enable or disable automatic file creation of raw response.
- **filename** (*basestring*) – The filename used to save the download file.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

The DownloadResponse wrapper. Wraps the urllib3.response.HTTPResponse. For more information check the [urllib3 documentation](#)

Return type

DownloadResponse

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.
- **DownloadFailure** – If was not able to download the raw
- **response to a file.** –

health_and_performance

class HealthAndPerformance

Cisco DNA Center Health and Performance API (version: 2.2.2.3).

Wraps the DNA Center Health and Performance API and exposes the API as native Python methods that return native Python objects.

```
system_health(domain=None, limit=None, offset=None, subdomain=None, summary=None,  
               headers=None, **request_parameters)
```

This API retrieves the latest system events .

Parameters

- **summary** (*bool*) – summary query parameter. Fetch the latest high severity event .
- **domain** (*basestring*) – domain query parameter. Fetch system events with this domain. Possible values of domain are listed here : /dna/platform/app/consumer-portal/developer-toolkit/events .
- **subdomain** (*basestring*) – subdomain query parameter. Fetch system events with this subdomain. Possible values of subdomain are listed here : /dna/platform/app/consumer-portal/developer-toolkit/events .
- **limit** (*int*) – limit query parameter.

- **offset** (*int*) – offset query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

system_health_count(*domain=None, subdomain=None, headers=None, **request_parameters*)

This API gives the count of the latest system events .

Parameters

- **domain** (*basestring*) – domain query parameter. Fetch system events with this domain. Possible values of domain are listed here : /dna/platform/app/consumer-portal/developer-toolkit/events .
- **subdomain** (*basestring*) – subdomain query parameter. Fetch system events with this subdomain. Possible values of subdomain are listed here : /dna/platform/app/consumer-portal/developer-toolkit/events .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

system_performance(*end_time=None, function=None, kpi=None, start_time=None, headers=None, **request_parameters*)

This API gives the aggregated performance indicators. The data can be retrieved for the last 3 months. .

Parameters

- **kpi** (*basestring*) – kpi query parameter. Valid values: cpu,memory,network .
- **function** (*basestring*) – function query parameter. Valid values: sum,average,max .

- **start_time** (*int*) – startTime query parameter. This is the epoch start time in milliseconds from which performance indicator need to be fetched .
- **end_time** (*int*) – endTime query parameter. This is the epoch end time in milliseconds upto which performance indicator need to be fetched .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

system_performance_historical(*end_time=None, kpi=None, start_time=None, headers=None, **request_parameters*)

This API retrieves the historical performance indicators . The data can be retrieved for the last 3 months. .

Parameters

- **kpi** (*basestring*) – kpi query parameter. Fetch historical data for this kpi. Valid values: cpu,memory,network .
- **start_time** (*int*) – startTime query parameter. This is the epoch start time in milliseconds from which performance indicator need to be fetched .
- **end_time** (*int*) – endTime query parameter. This is the epoch end time in milliseconds upto which performance indicator need to be fetched .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

itsm

class Itsm

Cisco DNA Center ITSM API (version: 2.2.2.3).

Wraps the DNA Center ITSM API and exposes the API as native Python methods that return native Python objects.

get_cmdb_sync_status(*date=None, status=None, headers=None, **request_parameters*)

This API allows to retrieve the detail of CMDB sync status. It accepts two query parameter “status”, “date”. The supported values for status field are “Success”, “Failed”, “Unknown” and date field should be in “YYYY-MM-DD” format. By default all the cmdb sync status will be send as response and based on the query parameter filtered detail will be send as response. .

Parameters

- **status** (*basestring*) – status query parameter. Supported values are “Success”, “Failed” and “Unknown”. Providing other values will result in all the available sync job status. .
- **date** (*basestring*) – date query parameter. Provide date in “YYYY-MM-DD” format .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_failed_itsm_events(*instance_id=None, headers=None, **request_parameters*)

Used to retrieve the list of integration events that failed to create tickets in ITSM .

Parameters

- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the failed event as in the Runtime Dashboard .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

retry_integration_events(*headers=None, payload=None, active_validation=True, **request_parameters*)

Allows retry of multiple failed ITSM event instances. The retry request payload can be given as a list of strings: ["instance1","instance2","instance3",...] A minimum of one instance Id is mandatory. The list of failed event instance Ids can be retrieved using the 'Get Failed ITSM Events' API in the 'instanceId' attribute. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

issues

class Issues

Cisco DNA Center Issues API (version: 2.2.2.3).

Wraps the DNA Center Issues API and exposes the API as native Python methods that return native Python objects.

get_issue_enrichment_details(*headers=None, **request_parameters*)

Enriches a given network issue context (an issue id or end user's Mac Address) with details about the issue(s), impacted hosts and suggested actions for remediation .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

issues(*ai_driven=None, device_id=None, end_time=None, issue_status=None, mac_address=None, priority=None, site_id=None, start_time=None, headers=None, **request_parameters*)

Intent API to get a list of global issues, issues for a specific device, or issue for a specific client device's MAC address. .

Parameters

- **start_time** (*int*) – startTime query parameter. Starting epoch time in milliseconds of query time window .
- **end_time** (*int*) – endTime query parameter. Ending epoch time in milliseconds of query time window .
- **site_id** (*basestring*) – siteId query parameter. Assurance UUID value of the site in the issue content .
- **device_id** (*basestring*) – deviceId query parameter. Assurance UUID value of the device in the issue content .
- **mac_address** (*basestring*) – macAddress query parameter. Client's device MAC address of the issue (format xx:xx:xx:xx:xx:xx) .
- **priority** (*basestring*) – priority query parameter. The issue's priority value (One of P1, P2, P3, or P4)(Use only when macAddress and deviceId are not provided) .
- **ai_driven** (*basestring*) – aiDriven query parameter. The issue's AI driven value (Yes or No)(Use only when macAddress and deviceId are not provided) .
- **issue_status** (*basestring*) – issueStatus query parameter. The issue's status value (One of ACTIVE, IGNORED, RESOLVED) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

licenses

class Licenses

Cisco DNA Center Licenses API (version: 2.2.2.3).

Wraps the DNA Center Licenses API and exposes the API as native Python methods that return native Python objects.

device_count_details(*device_type=None, dna_level=None, registration_status=None, smart_account_id=None, virtual_account_name=None, headers=None, **request_parameters*)

Get total number of managed device(s). .

Parameters

- **device_type** (*basestring*) – device_type query parameter. Type of device .
- **registration_status** (*basestring*) – registration_status query parameter. Smart license registration status of device .
- **dna_level** (*basestring*) – dna_level query parameter. Device Cisco DNA license level .
- **virtual_account_name** (*basestring*) – virtual_account_name query parameter. Name of virtual account .
- **smart_account_id** (*basestring*) – smart_account_id query parameter. Id of smart account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_license_summary(*limit, order, page_number, device_type=None, device_uuid=None, dna_level=None, registration_status=None, smart_account_id=None, sort_by=None, virtual_account_name=None, headers=None, **request_parameters*)

Show license summary of device(s). .

Parameters

- **page_number** (*int*) – page_number query parameter. Page number of response .
- **order** (*basestring*) – order query parameter. Sorting order .
- **sort_by** (*basestring*) – sort_by query parameter. Sort result by field .

- **dna_level** (*basestring*) – dna_level query parameter. Device Cisco DNA license level .
- **device_type** (*basestring*) – device_type query parameter. Type of device .
- **limit** (*int*) – limit query parameter.
- **registration_status** (*basestring*) – registration_status query parameter. Smart license registration status of device .
- **virtual_account_name** (*basestring*) – virtual_account_name query parameter. Name of virtual account .
- **smart_account_id** (*int*) – smart_account_id query parameter. Id of smart account .
- **device_uuid** (*basestring*) – device_uuid query parameter. Id of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_license_details(*device_uuid*, *headers=None*, ***request_parameters*)

Get detailed license information of a device. .

Parameters

- **device_uuid** (*basestring*) – device_uuid path parameter. Id of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_deregistration(*device_uuids=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Deregister device(s) from CSSM(Cisco Smart Software Manager). .

Parameters

- **device_uuids** (*list*) – Licenses’s Comma separated device ids (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_registration(*virtual_account_name, device_uuids=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Register device(s) in CSSM(Cisco Smart Software Manager). .

Parameters

- **device_uuids** (*list*) – Licenses’s Comma separated device ids (list of strings).
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of virtual account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

change_virtual_account(*smart_account_id*, *virtual_account_name*, *device_uuids=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Transfer device(s) from one virtual account to another within same smart account. .

Parameters

- **device_uuids** (*list*) – Licenses’s Comma separated device ids (list of strings).
- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of target virtual account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

virtual_account_details(*smart_account_id*, *headers=None*, ***request_parameters*)

Get virtual account details of a smart account. .

Parameters

- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

smart_account_details(*headers=None, **request_parameters*)

Get detail of all smart accounts. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

license_term_details(*device_type, smart_account_id, virtual_account_name, headers=None, **request_parameters*)

Get license term details. .

Parameters

- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of virtual account. Putting “All” will give license term detail for all virtual accounts. .
- **device_type** (*basestring*) – device_type query parameter. Type of device like router, switch, wireless or ise .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

license_usage_details(*device_type, smart_account_id, virtual_account_name, headers=None, **request_parameters*)

Get count of purchased and in use DNA and Network licenses. .

Parameters

- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of virtual account. Putting “All” will give license usage detail for all virtual accounts. .
- **device_type** (*basestring*) – device_type query parameter. Type of device like router, switch, wireless or ise .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

network_settings**class NetworkSettings**

Cisco DNA Center Network Settings API (version: 2.2.2.3).

Wraps the DNA Center Network Settings API and exposes the API as native Python methods that return native Python objects.

assign_credential_to_site(*site_id*, *cliId=None*, *httpRead=None*, *httpWrite=None*, *snmpV2ReadId=None*, *snmpV2WriteId=None*, *snmpV3Id=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Assign Device Credential To Site .

Parameters

- **cliId** (*string*) – Network Settings’s Cli Id.
- **httpRead** (*string*) – Network Settings’s Http Read.
- **httpWrite** (*string*) – Network Settings’s Http Write.
- **snmpV2ReadId** (*string*) – Network Settings’s Snmp V2 Read Id.
- **snmpV2WriteId** (*string*) – Network Settings’s Snmp V2 Write Id.
- **snmpV3Id** (*string*) – Network Settings’s Snmp V3 Id.
- **site_id** (*basestring*) – siteId path parameter. site id to assign credential. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_device_credentials(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to create device credentials. .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_device_credentials(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to update device credentials. .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_credential_details(*site_id=None, headers=None, **request_parameters*)

API to get device credential details. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Site id to retrieve the credential details associated with the site. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_device_credential(*id, headers=None, **request_parameters*)

Delete device credential. .

Parameters

- **id** (*basestring*) – id path parameter. global credential id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_global_pool(*limit=None, offset=None, headers=None, **request_parameters*)

API to get global pool. .

Parameters

- **offset** (*basestring*) – offset query parameter. offset/starting row .
- **limit** (*basestring*) – limit query parameter. No of Global Pools to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_global_pool(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to update global pool .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_global_pool(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to create global pool. .

Parameters

- **settings** (*object*) – Network Settings’s settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_global_ip_pool(*id, headers=None, **request_parameters*)

API to delete global IP pool. .

Parameters

- **id** (*basestring*) – id path parameter. global pool id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_network(*site_id=None, headers=None, **request_parameters*)

API to get DHCP and DNS center server details. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Site id to get the network settings associated with the site. .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_network(*site_id*, *settings=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

API to create a network for DHCP and DNS center server settings. .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **site_id** (*basestring*) – siteId path parameter. Site id to which site details to associate with the network settings. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_network(*site_id*, *settings=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

API to update network for DHCP and DNS center server settings. .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **site_id** (*basestring*) – siteId path parameter. Site id to update the network settings which is associated with the site .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_reserve_ip_subpool(*limit=None, offset=None, site_id=None, headers=None, **request_parameters*)

API to get the ip subpool info. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. site id to get the reserve ip associated with the site .
- **offset** (*basestring*) – offset query parameter. offset/starting row .
- **limit** (*basestring*) – limit query parameter. No of Global Pools to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

release_reserve_ip_subpool(*id, headers=None, **request_parameters*)

API to delete the reserved ip subpool .

Parameters

- **id** (*basestring*) – id path parameter. Id of reserve ip subpool to be deleted. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
reserve_ip_subpool(site_id, ipv4DhcpServers=None, ipv4DnsServers=None, ipv4GateWay=None,
                    ipv4GlobalPool=None, ipv4Prefix=None, ipv4PrefixLength=None, ipv4Subnet=None,
                    ipv4TotalHost=None, ipv6AddressSpace=None, ipv6DhcpServers=None,
                    ipv6DnsServers=None, ipv6GateWay=None, ipv6GlobalPool=None,
                    ipv6Prefix=None, ipv6PrefixLength=None, ipv6Subnet=None, ipv6TotalHost=None,
                    name=None, slaacSupport=None, type=None, headers=None, payload=None,
                    active_validation=True, **request_parameters)
```

API to reserve an ip subpool from the global pool .

Parameters

- **ipv4DhcpServers** (*list*) – Network Settings's IPv4 input for dhcp server ip example: 1.1.1.1 (list of strings).
- **ipv4DnsServers** (*list*) – Network Settings's IPv4 input for dns server ip example: 4.4.4.4 (list of strings).
- **ipv4GateWay** (*string*) – Network Settings's Gateway ip address details, example: 175.175.0.1 .
- **ipv4GlobalPool** (*string*) – Network Settings's IP v4 Global pool address with cidr, example: 175.175.0.0/16 .
- **ipv4Prefix** (*boolean*) – Network Settings's IPv4 prefix value is true, the ip4 prefix length input field is enabled , if it is false ipv4 total Host input is enable .
- **ipv4PrefixLength** (*integer*) – Network Settings's The ipv4 prefix length is required when ipv4prefix value is true. .
- **ipv4Subnet** (*string*) – Network Settings's IPv4 Subnet address, example: 175.175.0.0 .
- **ipv4TotalHost** (*integer*) – Network Settings's IPv4 total host is required when ipv4prefix value is false. .
- **ipv6AddressSpace** (*boolean*) – Network Settings's If the value is false only ipv4 input are required, otherwise both ipv6 and ipv4 are required .
- **ipv6DhcpServers** (*list*) – Network Settings's IPv6 format dhcp server as input example : 2001:db8::1234 (list of strings).
- **ipv6DnsServers** (*list*) – Network Settings's IPv6 format dns server input example: 2001:db8::1234 (list of strings).
- **ipv6GateWay** (*string*) – Network Settings's Gateway ip address details, example: 2001:db8:85a3:0:100::1 .
- **ipv6GlobalPool** (*string*) – Network Settings's IPv6 Global pool address with cidr this is required when Ipv6AddressSpace value is true, example: 2001:db8:85a3::/64 .

- **ipv6Prefix** (*boolean*) – Network Settings’s Ipv6 prefix value is true, the ip6 prefix length input field is enabled , if it is false ipv6 total Host input is enable .
- **ipv6PrefixLength** (*integer*) – Network Settings’s IPv6 prefix length is required when the ipv6prefix value is true .
- **ipv6Subnet** (*string*) – Network Settings’s IPv6 Subnet address, example :2001:db8:85a3:0:100:: .
- **ipv6TotalHost** (*integer*) – Network Settings’s IPv6 total host is required when ipv6prefix value is false. .
- **name** (*string*) – Network Settings’s Name of the reserve ip sub pool .
- **slaacSupport** (*boolean*) – Network Settings’s Slaac Support.
- **type** (*string*) – Network Settings’s Type of the reserve ip sub pool . Available values are ‘Generic’, ‘LAN’, ‘WAN’, ‘management’ and ‘service’.
- **site_id** (*basestring*) – siteId path parameter. Site id to reserve the ip sub pool. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_reserve_ip_subpool(id, site_id, ipv4DhcpServers=None, ipv4DnsServers=None,
                          ipv6AddressSpace=None, ipv6DhcpServers=None, ipv6DnsServers=None,
                          ipv6GateWay=None, ipv6GlobalPool=None, ipv6Prefix=None,
                          ipv6PrefixLength=None, ipv6Subnet=None, ipv6TotalHost=None,
                          name=None, slaacSupport=None, headers=None, payload=None,
                          active_validation=True, **request_parameters)
```

API to update ip subpool from the global pool .

Parameters

- **ipv4DhcpServers** (*list*) – Network Settings’s IPv4 input for dhcp server ip example: 1.1.1.1 (list of strings).
- **ipv4DnsServers** (*list*) – Network Settings’s IPv4 input for dns server ip example: 4.4.4.4 (list of strings).
- **ipv6AddressSpace** (*boolean*) – Network Settings’s If the value is false only ipv4 input are required, otherwise both ipv6 and ipv4 are required .

- **ipv6DhcpServers** (*list*) – Network Settings’s IPv6 format dhcp server as input example : 2001:db8::1234 (list of strings).
- **ipv6DnsServers** (*list*) – Network Settings’s IPv6 format dns server input example: 2001:db8::1234 (list of strings).
- **ipv6GateWay** (*string*) – Network Settings’s Gateway ip address details, example: 2001:db8:85a3:0:100::1 .
- **ipv6GlobalPool** (*string*) – Network Settings’s IP v6 Global pool address with cidr this is required when Ipv6AddressSpace value is true, example: 2001:db8:85a3::/64 .
- **ipv6Prefix** (*boolean*) – Network Settings’s IPv6 prefix value is true, the ip6 prefix length input field is enabled , if it is false ipv6 total Host input is enable .
- **ipv6PrefixLength** (*integer*) – Network Settings’s IPv6 prefix length is required when the ipv6prefix value is true .
- **ipv6Subnet** (*string*) – Network Settings’s IPv6 Subnet address, example :2001:db8:85a3:0:100:: .
- **ipv6TotalHost** (*integer*) – Network Settings’s IPv6 total host is required when ipv6prefix value is false. .
- **name** (*string*) – Network Settings’s Name of the reserve ip sub pool .
- **slaacSupport** (*boolean*) – Network Settings’s Slaac Support.
- **site_id** (*basestring*) – siteId path parameter. Site id of site to update sub pool. .
- **id** (*basestring*) – id query parameter. Id of subpool to be associated with the site .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_service_provider_details(*headers=None, **request_parameters*)

API to get service provider details (QoS). .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_sp_profile(settings=None, headers=None, payload=None, active_validation=True,  
                 **request_parameters)
```

API to create service provider profile(QOS). .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_sp_profile(settings=None, headers=None, payload=None, active_validation=True,  
                 **request_parameters)
```

API to update SP profile .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_sp_profile(*sp_profile_name*, *headers=None*, ***request_parameters*)

API to delete Service Provider profile (QoS). .

Parameters

- **sp_profile_name** (*basestring*) – sp-profile-name path parameter. sp profile name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

path_trace

class PathTrace

Cisco DNA Center Path Trace API (version: 2.2.2.3).

Wraps the DNA Center Path Trace API and exposes the API as native Python methods that return native Python objects.

retrives_all_previous_pathtraces_summary(*dest_ip=None*, *dest_port=None*, *gt_create_time=None*, *last_update_time=None*, *limit=None*, *lt_create_time=None*, *offset=None*, *order=None*, *periodic_refresh=None*, *protocol=None*, *sort_by=None*, *source_ip=None*, *source_port=None*, *status=None*, *task_id=None*, *headers=None*, ***request_parameters*)

Returns a summary of all flow analyses stored. Results can be filtered by specified parameters. .

Parameters

- **periodic_refresh** (*bool*) – periodicRefresh query parameter. Is analysis periodically refreshed? .

- **source_ip** (*basestring*) – sourceIP query parameter. Source IP address .
- **dest_ip** (*basestring*) – destIP query parameter. Destination IP adress .
- **source_port** (*basestring*) – sourcePort query parameter. Source port .
- **dest_port** (*basestring*) – destPort query parameter. Destination port .
- **gt_create_time** (*basestring*) – gtCreateTime query parameter. Analyses requested after this time .
- **lt_create_time** (*basestring*) – ltCreateTime query parameter. Analyses requested before this time .
- **protocol** (*basestring*) – protocol query parameter.
- **status** (*basestring*) – status query parameter.
- **task_id** (*basestring*) – taskId query parameter. Task ID .
- **last_update_time** (*basestring*) – lastUpdateTime query parameter. Last update time .
- **limit** (*basestring*) – limit query parameter. Number of resources returned .
- **offset** (*basestring*) – offset query parameter. Start index of resources returned (1-based) .
- **order** (*basestring*) – order query parameter. Order by this field .
- **sort_by** (*basestring*) – sortBy query parameter. Sort by this field .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

initiate_a_new_pathtrace(*controlPath=None, destIP=None, destPort=None, inclusions=None, periodicRefresh=None, protocol=None, sourceIP=None, sourcePort=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Initiates a new flow analysis with periodic refresh and stat collection options. Returns a request id and a task id to get results and follow progress. .

Parameters

- **controlPath** (*boolean*) – Path Trace's controlPath.
- **destIP** (*string*) – Path Trace's destIP.
- **destPort** (*string*) – Path Trace's destPort.

- **inclusions** (*list*) – Path Trace’s inclusions (list of strings).
- **periodicRefresh** (*boolean*) – Path Trace’s periodicRefresh.
- **protocol** (*string*) – Path Trace’s protocol.
- **sourceIP** (*string*) – Path Trace’s sourceIP.
- **sourcePort** (*string*) – Path Trace’s sourcePort.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

retrieves_previous_pathtrace(*flow_analysis_id*, *headers=None*, ***request_parameters*)

Returns result of a previously requested flow analysis by its Flow Analysis id .

Parameters

- **flow_analysis_id** (*basestring*) – flowAnalysisId path parameter. Flow analysis request id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deletes_pathtrace_by_id(*flow_analysis_id*, *headers=None*, ***request_parameters*)

Deletes a flow analysis request by its id .

Parameters

- **flow_analysis_id** (*basestring*) – flowAnalysisId path parameter. Flow analysis request id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

platform_configuration**class PlatformConfiguration**

Cisco DNA Center Platform Configuration API (version: 2.2.2.3).

Wraps the DNA Center Platform Configuration API and exposes the API as native Python methods that return native Python objects.

release_summary(*headers=None, **request_parameters*)

Provides information such as API version, mandatory core packages for installation or upgrade, optional packages, Cisco DNA Center name and version, supported direct updates, and tenant ID. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

nodes_configuration_summary(*headers=None, **request_parameters*)

Provides details about the current Cisco DNA Center node configuration, such as API version, node name, NTP server, intracenter link, LACP mode, network static routes, DNS server, subnet mask, host IP, default gateway, and interface information. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

reports

class Reports

Cisco DNA Center Reports API (version: 2.2.2.3).

Wraps the DNA Center Reports API and exposes the API as native Python methods that return native Python objects.

create_or_schedule_a_report(*deliveries=None, name=None, schedule=None, tags=None, view=None, viewGroupId=None, viewGroupVersion=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Create/Schedule a report configuration. Use “Get view details for a given view group & view” API to get the metadata required to configure a report. .

Parameters

- **deliveries** (*list*) – Reports's Array of available delivery channels (list of objects).
- **name** (*string*) – Reports's report name .
- **schedule** (*object*) – Reports's schedule.
- **tags** (*list*) – Reports's array of tags for report (list of strings).
- **view** (*object*) – Reports's view.
- **viewGroupId** (*string*) – Reports's viewGroupId of the viewgroup for the report .
- **viewGroupVersion** (*string*) – Reports's version of viewgroup for the report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_list_of_scheduled_reports(*view_group_id=None, view_id=None, headers=None, **request_parameters*)

Get list of scheduled report configurations. .

Parameters

- **view_group_id** (*basestring*) – viewGroupId query parameter. viewGroupId of view-group for report .
- **view_id** (*basestring*) – viewId query parameter. viewId of view for report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type*list***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_a_scheduled_report(*report_id, headers=None, **request_parameters*)

Get scheduled report configuration by reportId .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

delete_a_scheduled_report(*report_id*, *headers=None*, ***request_parameters*)

Delete a scheduled report configuration. Deletes the report executions also. .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_all_execution_details_for_a_given_report(*report_id*, *headers=None*, ***request_parameters*)

Get details of all executions for a given report .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

download_report_content(*execution_id*, *report_id*, *dirpath=None*, *save_file=None*, *filename=None*, *headers=None*, ***request_parameters*)

Returns report content. Save the response to a file by converting the response data as a blob and setting the file format available from content-disposition response header. .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .

- **execution_id** (*basestring*) – executionId path parameter. executionId of report execution .
- **dirpath** (*basestring*) – Directory absolute path. Defaults to os.getcwd().
- **save_file** (*bool*) – Enable or disable automatic file creation of raw response.
- **filename** (*basestring*) – The filename used to save the download file.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

The DownloadResponse wrapper. Wraps the urllib3.response.HTTPResponse. For more information check the [urllib3 documentation](#)

Return type

DownloadResponse

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.
- **DownloadFailure** – If was not able to download the raw
- **response to a file.** –

get_all_view_groups(*headers=None, **request_parameters*)

Gives a list of summary of all view groups. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_views_for_a_given_view_group(*view_group_id, headers=None, **request_parameters*)

Gives a list of summary of all views in a viewgroup. Use “Get all view groups” API to get the viewGroupIds (required as a query param for this API) for available viewgroups. .

Parameters

- **view_group_id** (*basestring*) – viewGroupId path parameter. viewGroupId of viewgroup. .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_view_details_for_a_given_view_group_and_view(*view_group_id*, *view_id*, *headers=None*,
***request_parameters*)

Gives complete information of the view that is required to configure a report. Use “Get views for a given view group” API to get the viewIds (required as a query param for this API) for available views. .

Parameters

- **view_group_id** (*basestring*) – viewGroupId path parameter. viewGroupId of view-group .
- **view_id** (*basestring*) – viewId path parameter. view id of view .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sda**class Sda**

Cisco DNA Center SDA API (version: 2.2.2.3).

Wraps the DNA Center SDA API and exposes the API as native Python methods that return native Python objects.

get_default_authentication_profile(*site_name_hierarchy*, *headers=None*, ***request_parameters*)

Get default authentication profile from SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_default_authentication_profile(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add default authentication profile in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_default_authentication_profile(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Update default authentication profile in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.

- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_default_authentication_profile(*site_name_hierarchy*, *headers=None*,
***request_parameters*)

Add default authentication profile in SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

adds_border_device(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Adds border device in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

gets_border_device_detail(*device_ipaddress*, *headers=None*, ***request_parameters*)

Gets border device detail from SDA Fabric .

Parameters

- **device_ipaddress** (*basestring*) – deviceIPAddress query parameter. Device IP Address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deletes_border_device(*device_ipaddress*, *headers=None*, ***request_parameters*)

Deletes border device from SDA Fabric .

Parameters

- **device_ipaddress** (*basestring*) – deviceIPAddress query parameter. Device IP Address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_control_plane_device(*device_ipaddress*, *headers=None*, ***request_parameters*)

Delete control plane device in SDA Fabric .

Parameters

- **device_ipaddress** (*basestring*) – deviceIPAddress query parameter. Device IP Address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_control_plane_device(*device_ipaddress*, *headers=None*, ***request_parameters*)

Get control plane device from SDA Fabric .

Parameters

- **device_ipaddress** (*basestring*) – deviceIPAddress query parameter. Device IP Address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_control_plane_device(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add control plane device in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.

- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_info(*device_ipaddress*, *headers=None*, ***request_parameters*)

Get device info from SDA Fabric .

Parameters

- **device_ipaddress** (*basestring*) – deviceIPAddress query parameter. Device IP Address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_role_in_sda_fabric(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Get device role in SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter. Device Management IP Address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_edge_device(*headers=None, payload=None, active_validation=True, **request_parameters*)

Add edge device in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_edge_device(*device_ipaddress, headers=None, **request_parameters*)

Delete edge device from SDA Fabric. .

Parameters

- **device_ipaddress** (*basestring*) – deviceIPAddress query parameter. Device IP Address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_edge_device(*device_ipaddress*, *headers=None*, ***request_parameters*)

Get edge device from SDA Fabric .

Parameters

- **device_ipaddress** (*basestring*) – deviceIPAddress query parameter. Device IP Address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_sda_fabric(*fabric_name*, *headers=None*, ***request_parameters*)

Delete SDA Fabric .

Parameters

- **fabric_name** (*basestring*) – fabricName query parameter. Fabric Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_sda_fabric_info(*fabric_name*, *headers=None*, ***request_parameters*)

Get SDA Fabric Info .

Parameters

- **fabric_name** (*basestring*) – fabricName query parameter. Fabric Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_fabric(*headers=None, payload=None, active_validation=True, **request_parameters*)

Add SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site(*site_name_hierarchy, headers=None, **request_parameters*)

Get Site info from SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. Site Name Hierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_site(*site_name_hierarchy*, *headers=None*, ***request_parameters*)

Delete Site from SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. Site Name Hierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_site(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add Site in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_sda_fabric_count(*headers=None*, ***request_parameters*)

Get SDA Fabric Count .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_port_assignment_for_access_point(*headers=None, payload=None, active_validation=True, **request_parameters*)

Add Port assignment for access point in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_port_assignment_for_access_point(*device_ip, interface_name, headers=None, **request_parameters*)

Delete Port assignment for access point in SDA Fabric .

Parameters

- **device_ip** (*basestring*) – device-ip query parameter.
- **interface_name** (*basestring*) – interfaceName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_port_assignment_for_access_point(*device_ip, interface_name, headers=None, **request_parameters*)

Get Port assignment for access point in SDA Fabric .

Parameters

- **device_ip** (*basestring*) – device-ip query parameter.
- **interface_name** (*basestring*) – interfaceName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_port_assignment_for_user_device(*device_ip, interface_name, headers=None, **request_parameters*)

Delete Port assignment for user device in SDA Fabric. .

Parameters

- **device_ip** (*basestring*) – device-ip query parameter.
- **interface_name** (*basestring*) – interfaceName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_port_assignment_for_user_device(*headers=None, payload=None, active_validation=True, **request_parameters*)

Add Port assignment for user device in SDA Fabric. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_port_assignment_for_user_device(*device_ip, interface_name, headers=None, **request_parameters*)

Get Port assignment for user device in SDA Fabric. .

Parameters

- **device_ip** (*basestring*) – device-ip query parameter.
- **interface_name** (*basestring*) – interfaceName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
add_multicast_in_sda_fabric(fabricSiteNameHierarchy=None, multicastMethod=None,
                             multicastVnInfo=None, muticastType=None, headers=None,
                             payload=None, active_validation=True, **request_parameters)
```

Add multicast in SDA fabric .

Parameters

- **fabricSiteNameHierarchy** (*string*) – SDA’s fabricSiteNameHierarchy .
- **multicastMethod** (*string*) – SDA’s multicast methods . Available values are ‘native_multicast’ and ‘’.
- **multicastVnInfo** (*object*) – SDA’s multicastVnInfo.
- **muticastType** (*string*) – SDA’s muticast type . Available values are ‘ssm’, ‘asm_with_external_rp’ and ‘’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_multicast_details_from_sda_fabric(fabric_site_name_hierarchy, headers=None,
                                       **request_parameters)
```

Get multicast details from SDA fabric .

Parameters

- **fabric_site_name_hierarchy** (*basestring*) – fabricSiteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_multicast_from_sda_fabric(*fabric_site_name_hierarchy*, *headers=None*,
***request_parameters*)

Delete multicast from SDA fabric .

Parameters

- **fabric_site_name_hierarchy** (*basestring*) – fabricSiteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_provisioned_wired_device(*device_management_ip_address*, *headers=None*,
***request_parameters*)

Delete provisioned Wired Device .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter. Valid IP address of the device currently provisioned in a fabric site .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

provision_wired_device(*deviceManagementIpAddress=None*, *siteNameHierarchy=None*, *headers=None*,
payload=None, *active_validation=True*, ***request_parameters*)

Provision Wired Device .

Parameters

- **deviceManagementIpAddress** (*string*) – SDA's Device Management Ip Address.
- **siteNameHierarchy** (*string*) – SDA's Site Name Hierarchy.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_provisioned_wired_device(*device_management_ip_address*, *headers=None*,
 ***request_parameters*)

Get Provisioned Wired Device .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_vn(*site_name_hierarchy*, *virtual_network_name*, *headers=None*, ***request_parameters*)

Delete virtual network (VN) from SDA Fabric .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_vn(*site_name_hierarchy*, *virtual_network_name*, *headers=None*, ***request_parameters*)

Get virtual network (VN) from SDA Fabric .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_vn(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add virtual network (VN) in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_ip_pool_from_sda_virtual_network(*ip_pool_name*, *virtual_network_name*, *headers=None*,
***request_parameters*)

Get IP Pool from SDA Virtual Network .

Parameters

- **ip_pool_name** (*basestring*) – ipPoolName query parameter.
- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_ip_pool_from_sda_virtual_network(*ip_pool_name*, *virtual_network_name*, *headers=None*,
***request_parameters*)

Delete IP Pool from SDA Virtual Network .

Parameters

- **ip_pool_name** (*basestring*) – ipPoolName query parameter.
- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_ip_pool_in_sda_virtual_network(*headers=None, payload=None, active_validation=True, **request_parameters*)

Add IP Pool in SDA Virtual Network .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_virtual_network_with_scalable_groups(*isGuestVirtualNetwork=None, scalableGroupNames=None, virtualNetworkName=None, virtualNetworkType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Add virtual network with scalable groups at global level .

Parameters

- **isGuestVirtualNetwork** (*boolean*) – SDA's isGuestVirtualNetwork.
- **scalableGroupNames** (*list*) – SDA's Scalable Group Names (list of strings).
- **virtualNetworkName** (*string*) – SDA's Virtual Network Name.
- **virtualNetworkType** (*string*) – SDA's Virtual Network Type.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_virtual_network_with_scalable_groups(*virtual_network_name*, *headers=None*,
***request_parameters*)

Delete virtual network with scalable groups .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_virtual_network_with_scalable_groups(*virtual_network_name*, *headers=None*,
***request_parameters*)

Get virtual network with scalable groups .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_virtual_network_with_scalable_groups(isGuestVirtualNetwork=None,  
                                           scalableGroupNames=None,  
                                           virtualNetworkName=None,  
                                           virtualNetworkType=None, headers=None,  
                                           payload=None, active_validation=True,  
                                           **request_parameters)
```

Update virtual network with scalable groups .

Parameters

- **isGuestVirtualNetwork** (*boolean*) – SDA’s Is Guest Virtual Network.
- **scalableGroupNames** (*list*) – SDA’s Scalable Group Names (list of strings).
- **virtualNetworkName** (*string*) – SDA’s Virtual Network Name.
- **virtualNetworkType** (*string*) – SDA’s Virtual Network Type.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

security_advisories

class SecurityAdvisories

Cisco DNA Center Security Advisories API (version: 2.2.2.3).

Wraps the DNA Center Security Advisories API and exposes the API as native Python methods that return native Python objects.

```
get_advisories_list(headers=None, **request_parameters)
```

Retrieves list of advisories on the network .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_advisories_summary(*headers=None, **request_parameters*)

Retrieves summary of advisories on the network. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_devices_per_advisory(*advisory_id, headers=None, **request_parameters*)

Retrieves list of devices for an advisory .

Parameters

- **advisory_id** (*basestring*) – advisoryId path parameter. Advisory ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_advisory_ids_per_device(*device_id, headers=None, **request_parameters*)

Retrieves list of advisory IDs for a device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device instance UUID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_advisories_per_device(*device_id*, *headers=None*, ***request_parameters*)

Retrieves list of advisories for a device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device instance UUID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sensors

class Sensors

Cisco DNA Center Sensors API (version: 2.2.2.3).

Wraps the DNA Center Sensors API and exposes the API as native Python methods that return native Python objects.

edit_sensor_test_template(*locationInfoList=None*, *schedule=None*, *templateName=None*,
headers=None, *payload=None*, *active_validation=True*,
***request_parameters*)

Intent API to deploy, schedule, or edit and existing SENSOR test template .

Parameters

- **locationInfoList** (*list*) – Sensors’s locationInfoList (list of objects).
- **schedule** (*object*) – Sensors’s schedule.
- **templateName** (*string*) – Sensors’s Template Name.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_sensor_test_template(*apCoverage=None, connection=None, modelVersion=None, name=None, ssids=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Intent API to create a SENSOR test template with a new SSID, existing SSID, or both new and existing SSID .

Parameters

- **apCoverage** (*list*) – Sensors’s apCoverage (list of objects).
- **connection** (*string*) – Sensors’s Connection.
- **modelVersion** (*integer*) – Sensors’s Model Version.
- **name** (*string*) – Sensors’s Name.
- **ssids** (*list*) – Sensors’s ssids (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_sensor_test(*template_name=None, headers=None, **request_parameters*)

Intent API to delete an existing SENSOR test template .

Parameters

- **template_name** (*basestring*) – templateName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sensors(*site_id=None, headers=None, **request_parameters*)

Intent API to get a list of SENSOR devices .

Parameters

- **site_id** (*basestring*) – siteId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

run_now_sensor_test(*templateName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Intent API to run a deployed SENSOR test .

Parameters

- **templateName** (*string*) – Sensors's Template Name.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

duplicate_sensor_test_template(*newTemplateName=None, templateName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Intent API to duplicate an existing SENSOR test template .

Parameters

- **newTemplateName** (*string*) – Sensors's New Template Name.
- **templateName** (*string*) – Sensors's Template Name.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

site_design

class SiteDesign

Cisco DNA Center Site Design API (version: 2.2.2.3).

Wraps the DNA Center Site Design API and exposes the API as native Python methods that return native Python objects.

provision_nfv(*provisioning=None, siteProfile=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Design and Provision single/multi NFV device with given site/area/building/floor . .

Parameters

- **provisioning** (*list*) – Site Design’s provisioning (list of objects).
- **siteProfile** (*list*) – Site Design’s siteProfile (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_details_by_ip(*device_ip, headers=None, **request_parameters*)

Returns provisioning device information for the specified IP address. .

Parameters

- **device_ip** (*basestring*) – deviceIp query parameter. Device to which the provisioning detail has to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

nfv_provisioning_detail(*device_ip=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Checks the provisioning detail of an ENCS device including log information. .

Parameters

- **device_ip** (*string*) – Site Design's Device Ip.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_nfv_profile(*device=None, profileName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to create network profile for different NFV topologies .

Parameters

- **device** (*list*) – Site Design's device (list of objects).
- **profileName** (*string*) – Site Design's Name of the profile to create NFV profile .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

update_nfv_profile(*id*, *device=None*, *name=None*, *headers=None*, *payload=None*,
active_validation=True, ***request_parameters*)

API to update a NFV Network profile .

Parameters

- **device** (*list*) – Site Design's device (list of objects).
- **id** (*basestring*) – id path parameter. Id of the NFV profile to be updated .
- **name** (*basestring*) – name query parameter. Name of the profile to be updated .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_nfv_profile(*id*, *limit=None*, *name=None*, *offset=None*, *headers=None*, ***request_parameters*)

API to get NFV network profile. .

Parameters

- **id** (*basestring*) – id path parameter. ID of network profile to retrieve. .
- **offset** (*basestring*) – offset query parameter. offset/starting row .
- **limit** (*basestring*) – limit query parameter. Number of profile to be retrieved .
- **name** (*basestring*) – name query parameter. Name of network profile to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_nfv_profile(*id*, *name=None*, *headers=None*, ***request_parameters*)

API to delete nfv network profile. .

Parameters

- **id** (*basestring*) – id path parameter. Id of nfv network profile to delete. .
- **name** (*basestring*) – name query parameter. Name of nfv network profile to delete. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_floormap(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Service to create a floor map with callback .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_floormaps(*headers=None*, ***request_parameters*)

List all floor maps .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_floormap(*floor_id*, *headers=None*, ***request_parameters*)

Service to delete an (empty) floor map with callback .

Parameters

- **floor_id** (*basestring*) – floorId path parameter. Group ID of floor to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_floormap(*floor_id*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Service to create a floor map with callback .

Parameters

- **floor_id** (*basestring*) – floorId path parameter. Group ID of the floor to be modified .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_floormap(*floor_id*, *headers=None*, ***request_parameters*)

List specified floor map(s) .

Parameters

- **floor_id** (*basestring*) – floorId path parameter. Group Id of the specified floormap .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sites**class Sites**

Cisco DNA Center Sites API (version: 2.2.2.3).

Wraps the DNA Center Sites API and exposes the API as native Python methods that return native Python objects.

get_membership(*site_id*, *device_family=None*, *limit=None*, *offset=None*, *serial_number=None*, *headers=None*, ***request_parameters*)

Getting the site children details and device details. .

Parameters

- **site_id** (*basestring*) – siteId path parameter. Site id to retrieve device associated with the site. .
- **offset** (*basestring*) – offset query parameter. offset/starting row .
- **limit** (*basestring*) – limit query parameter. Number of sites to be retrieved .
- **device_family** (*basestring*) – deviceFamily query parameter. Device family name .
- **serial_number** (*basestring*) – serialNumber query parameter. Device serial number .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_site(*site=None, type=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Creates site with area/building/floor with specified hierarchy. .

Parameters

- **site** (*object*) – Sites's site.
- **type** (*string*) – Sites's Type of site to create (eg: area, building, floor) . Available values are 'area', 'building' and 'floor'.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site(*limit=None, name=None, offset=None, site_id=None, type=None, headers=None, **request_parameters*)

Get site using siteNameHierarchy/siteId/type ,return all sites if these parameters are not given as input. .

Parameters

- **name** (*basestring*) – name query parameter. siteNameHierarchy (ex: global/groupName) .
- **site_id** (*basestring*) – siteId query parameter. Site id to which site details to retrieve. .
- **type** (*basestring*) – type query parameter. type (ex: area, building, floor) .

- **offset** (*basestring*) – offset query parameter. offset/starting row. The default value is 1 .
- **limit** (*basestring*) – limit query parameter. Number of sites to be retrieved. The default value is 500 .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site_health(*timestamp=None, headers=None, **request_parameters*)

Returns Overall Health information for all sites .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the Site Hierarchy data is required .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site_count(*site_id=None, headers=None, **request_parameters*)

API to get site count .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Site id to retrieve site count. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_site(*site_id*, *site=None*, *type=None*, *headers=None*, *payload=None*, *active_validation=True*,
***request_parameters*)

Update site area/building/floor with specified hierarchy and new values .

Parameters

- **site** (*object*) – Sites's site.
- **type** (*string*) – Sites's Type. Available values are 'area', 'building' and 'floor'.
- **site_id** (*basestring*) – siteId path parameter. Site id to which site details to be updated.
.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_site(*site_id*, *headers=None*, ***request_parameters*)

Delete site with area/building/floor by siteId. .

Parameters

- **site_id** (*basestring*) – siteId path parameter. Site id to which site details to be deleted.
.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

assign_device_to_site(*site_id*, *device=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Assigns list of devices to a site .

Parameters

- **device** (*list*) – Sites's device (list of objects).
- **site_id** (*basestring*) – siteId path parameter. Site id to which site the device to assign .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

software_image_management_swim**class SoftwareImageManagementSwim**

Cisco DNA Center Software Image Management (SWIM) API (version: 2.2.2.3).

Wraps the DNA Center Software Image Management (SWIM) API and exposes the API as native Python methods that return native Python objects.

trigger_software_image_activation(*schedule_validate=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Activates a software image on a given device. Software image must be present in the device flash .

Parameters

- **schedule_validate** (*bool*) – scheduleValidate query parameter. scheduleValidate, validates data before schedule (Optional) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

trigger_software_image_distribution(*headers=None, payload=None, active_validation=True, **request_parameters*)

Distributes a software image on a given device. Software image must be imported successfully into DNA Center before it can be distributed .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_software_image_details(*application_type=None, created_time=None, family=None, image_integrity_status=None, image_name=None, image_series=None, image_size_greater_than=None, image_size_lesser_than=None, image_uuid=None, is_cco_latest=None, is_cco_recommended=None, is_tagged_golden=None, limit=None, name=None, offset=None, sort_by=None, sort_order=None, version=None, headers=None, **request_parameters*)

Returns software image list based on a filter criteria. For example: “filterbyName = cat3k%” .

Parameters

- **image_uuid** (*basestring*) – imageUuid query parameter.
- **name** (*basestring*) – name query parameter.
- **family** (*basestring*) – family query parameter.
- **application_type** (*basestring*) – applicationType query parameter.
- **image_integrity_status** (*basestring*) – imageIntegrityStatus query parameter. imageIntegrityStatus FAILURE, UNKNOWN, VERIFIED .
- **version** (*basestring*) – version query parameter. software Image Version .
- **image_series** (*basestring*) – imageSeries query parameter. image Series .
- **image_name** (*basestring*) – imageName query parameter. image Name .
- **is_tagged_golden** (*bool*) – isTaggedGolden query parameter. is Tagged Golden .
- **is_cco_recommended** (*bool*) – isCCORecommended query parameter. is recommended from cisco.com .
- **is_cco_latest** (*bool*) – isCCOLatest query parameter. is latest from cisco.com .
- **created_time** (*int*) – createTime query parameter. time in milliseconds (epoch format) .
- **image_size_greater_than** (*int*) – imageSizeGreaterThan query parameter. size in bytes .
- **image_size_lesser_than** (*int*) – imageSizeLesserThan query parameter. size in bytes .
- **sort_by** (*basestring*) – sortBy query parameter. sort results by this field .
- **sort_order** (*basestring*) – sortOrder query parameter. sort order ‘asc’ or ‘des’. Default is asc .
- **limit** (*int*) – limit query parameter.
- **offset** (*int*) – offset query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
import_local_software_image(multipart_fields, multipart_monitor_callback, is_third_party=None,
                             third_party_application_type=None, third_party_image_family=None,
                             third_party_vendor=None, headers=None, **request_parameters)
```

Fetches a software image from local file system and uploads to DNA Center. Supported software image files extensions are bin, img, tar, smu, pie, aes, iso, ova, tar_gz and qcow2. Upload the file to the **file** form data field .

The following code gives an example of the multipart_fields.

```
multipart_fields={'file': ('file.zip', open('file.zip', 'rb'))}
multipart_fields={'file': ('file.txt', open('file.txt', 'rb')),
                  'text/plain',
                  {'X-My-Header': 'my-value'}}}
multipart_fields=[('images', ('foo.png', open('foo.png', 'rb'),
                              'image/png')),
                  ('images', ('bar.png', open('bar.png', 'rb'), 'image/png'))]
```

The following example demonstrates how to use `multipart_monitor_callback=create_callback` to create a progress bar using clint.

```
from clint.textui.progress import Bar
def create_callback(encoder):
    encoder_len = encoder.len
    bar = Bar(expected_size=encoder_len,
              filled_char="=")
    def callback(monitor):
        bar.show(monitor.bytes_read)
    return callback
```

Parameters

- **is_third_party** (*bool*) – isThirdParty query parameter. Third party Image check .
- **third_party_vendor** (*basestring*) – thirdPartyVendor query parameter. Third Party Vendor .
- **third_party_image_family** (*basestring*) – thirdPartyImageFamily query parameter. Third Party image family .
- **third_party_application_type** (*basestring*) – thirdPartyApplicationType query parameter. Third Party Application Type .
- **multipart_fields** (*dict*) – Fields from which to create a multipart/form-data body.
- **multipart_monitor_callback** (*function*) – function used to monitor the progress of the upload.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
import_software_image_via_url(schedule_at=None, schedule_desc=None, schedule_origin=None,
                             headers=None, payload=None, active_validation=True,
                             **request_parameters)
```

Fetches a software image from remote file system (using URL for HTTP/FTP) and uploads to DNA Center. Supported image files extensions are bin, img, tar, smu, pie, aes, iso, ova, tar_gz and qcow2 .

Parameters

- **schedule_at** (*basestring*) – scheduleAt query parameter. Epoch Time (The number of milli-seconds since January 1 1970 UTC) at which the distribution should be scheduled (Optional) .
- **schedule_desc** (*basestring*) – scheduleDesc query parameter. Custom Description (Optional) .
- **schedule_origin** (*basestring*) – scheduleOrigin query parameter. Originator of this call (Optional) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

tag

class Tag

Cisco DNA Center Tag API (version: 2.2.2.3).

Wraps the DNA Center Tag API and exposes the API as native Python methods that return native Python objects.

```
update_tag(description=None, dynamicRules=None, id=None, instanceTenantId=None, name=None,
            systemTag=None, headers=None, payload=None, active_validation=True,
            **request_parameters)
```

Updates a tag specified by id .

Parameters

- **description** (*string*) – Tag’s description.
- **dynamicRules** (*list*) – Tag’s dynamicRules (list of objects).
- **id** (*string*) – Tag’s id.
- **instanceTenantId** (*string*) – Tag’s instanceTenantId.
- **name** (*string*) – Tag’s name.
- **systemTag** (*boolean*) – Tag’s systemTag.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag(*additional_info_attributes=None, additional_info_name_space=None, field=None, level=None, limit=None, name=None, offset=None, order=None, size=None, sort_by=None, system_tag=None, headers=None, **request_parameters*)

Returns the tags for given filter criteria .

Parameters

- **name** (*basestring*) – name query parameter. Tag name is mandatory when filter operation is used. .
- **additional_info_name_space** (*basestring*) – additionalInfo.nameSpace query parameter.
- **additional_info_attributes** (*basestring*) – additionalInfo.attributes query parameter.
- **level** (*basestring*) – level query parameter.
- **offset** (*basestring*) – offset query parameter.
- **limit** (*basestring*) – limit query parameter.
- **size** (*basestring*) – size query parameter. size in kilobytes(KB) .
- **field** (*basestring*) – field query parameter. Available field names are :’name,id,parentId,type,additionalInfo.nameSpace,additionalInfo.attributes’ .
- **sort_by** (*basestring*) – sortBy query parameter. Only supported attribute is name. SortyBy is mandatory when order is used. .
- **order** (*basestring*) – order query parameter. Available values are asc and des .

- **system_tag** (*basestring*) – systemTag query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_tag(*description=None, dynamicRules=None, id=None, instanceTenantId=None, name=None, systemTag=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Creates tag with specified tag attributes .

Parameters

- **description** (*string*) – Tag's description.
- **dynamicRules** (*list*) – Tag's dynamicRules (list of objects).
- **id** (*string*) – Tag's id.
- **instanceTenantId** (*string*) – Tag's instanceTenantId.
- **name** (*string*) – Tag's name.
- **systemTag** (*boolean*) – Tag's systemTag.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_count(*attribute_name=None, level=None, name=None, name_space=None, size=None, system_tag=None, headers=None, **request_parameters*)

Returns tag count .

Parameters

- **name** (*basestring*) – name query parameter.
- **name_space** (*basestring*) – nameSpace query parameter.
- **attribute_name** (*basestring*) – attributeName query parameter.
- **level** (*basestring*) – level query parameter.
- **size** (*basestring*) – size query parameter. size in kilobytes(KB) .
- **system_tag** (*basestring*) – systemTag query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

updates_tag_membership(*memberToTags=None, memberType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates tag membership. As part of the request payload through this API, only the specified members are added / retained to the given input tags. Possible values of memberType attribute in the request payload can be queried by using the /tag/member/type API .

Parameters

- **memberToTags** (*list*) – Tag's memberToTags (list of objects).
- **memberType** (*string*) – Tag's memberType.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_resource_types(*headers=None, **request_parameters*)

Returns list of supported resource types .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_tag(*id, headers=None, **request_parameters*)

Deletes a tag specified by id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_by_id(*id, headers=None, **request_parameters*)

Returns tag specified by Id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_members_by_id(*id*, *member_type*, *level=None*, *limit=None*, *member_association_type=None*, *offset=None*, *headers=None*, ***request_parameters*)

Returns tag members specified by id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **member_type** (*basestring*) – memberType query parameter. Entity type of the member. Possible values can be retrieved by using /tag/member/type API .
- **offset** (*basestring*) – offset query parameter. Used for pagination. It indicates the starting row number out of available member records .
- **limit** (*basestring*) – limit query parameter. Used to Number of maximum members to return in the result .
- **member_association_type** (*basestring*) – memberAssociationType query parameter. Indicates how the member is associated with the tag. Possible values and description. 1) DYNAMIC : The member is associated to the tag through rules. 2) STATIC – The member is associated to the tag manually. 3) MIXED – The member is associated manually and also satisfies the rule defined for the tag .
- **level** (*basestring*) – level query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_members_to_the_tag(*id*, *headers=None*, *payload=None*, *active_validation=True*,
***request_parameters*)

Adds members to the tag specified by id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_member_count(*id*, *member_type*, *level=None*, *member_association_type=None*, *headers=None*,
***request_parameters*)

Returns the number of members in a given tag .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **member_type** (*basestring*) – memberType query parameter.
- **member_association_type** (*basestring*) – memberAssociationType query parameter.
- **level** (*basestring*) – level query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

remove_tag_member(*id*, *member_id*, *headers=None*, ***request_parameters*)

Removes Tag member from the tag specified by *id* .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **member_id** (*basestring*) – memberId path parameter. TagMember id to be removed from tag .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

task

class Task

Cisco DNA Center Task API (version: 2.2.2.3).

Wraps the DNA Center Task API and exposes the API as native Python methods that return native Python objects.

get_tasks(*data=None*, *end_time=None*, *error_code=None*, *failure_reason=None*, *is_error=None*, *limit=None*, *offset=None*, *order=None*, *parent_id=None*, *progress=None*, *service_type=None*, *sort_by=None*, *start_time=None*, *username=None*, *headers=None*, ***request_parameters*)

Returns task(s) based on filter criteria .

Parameters

- **start_time** (*basestring*) – startTime query parameter. This is the epoch start time from which tasks need to be fetched .
- **end_time** (*basestring*) – endTime query parameter. This is the epoch end time upto which audit records need to be fetched .
- **data** (*basestring*) – data query parameter. Fetch tasks that contains this data .
- **error_code** (*basestring*) – errorCode query parameter. Fetch tasks that have this error code .
- **service_type** (*basestring*) – serviceType query parameter. Fetch tasks with this service type .
- **username** (*basestring*) – username query parameter. Fetch tasks with this username .
- **progress** (*basestring*) – progress query parameter. Fetch tasks that contains this progress .

- **is_error** (*basestring*) – isError query parameter. Fetch tasks ended as success or failure. Valid values: true, false .
- **failure_reason** (*basestring*) – failureReason query parameter. Fetch tasks that contains this failure reason .
- **parent_id** (*basestring*) – parentId query parameter. Fetch tasks that have this parent Id .
- **offset** (*basestring*) – offset query parameter.
- **limit** (*basestring*) – limit query parameter.
- **sort_by** (*basestring*) – sortBy query parameter. Sort results by this field .
- **order** (*basestring*) – order query parameter. Sort order asc or dsc .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_task_count(*data=None, end_time=None, error_code=None, failure_reason=None, is_error=None, parent_id=None, progress=None, service_type=None, start_time=None, username=None, headers=None, **request_parameters*)

Returns Task count .

Parameters

- **start_time** (*basestring*) – startTime query parameter. This is the epoch start time from which tasks need to be fetched .
- **end_time** (*basestring*) – endTime query parameter. This is the epoch end time upto which audit records need to be fetched .
- **data** (*basestring*) – data query parameter. Fetch tasks that contains this data .
- **error_code** (*basestring*) – errorCode query parameter. Fetch tasks that have this error code .
- **service_type** (*basestring*) – serviceType query parameter. Fetch tasks with this service type .
- **username** (*basestring*) – username query parameter. Fetch tasks with this username .
- **progress** (*basestring*) – progress query parameter. Fetch tasks that contains this progress .
- **is_error** (*basestring*) – isError query parameter. Fetch tasks ended as success or failure. Valid values: true, false .

- **failure_reason** (*basestring*) – failureReason query parameter. Fetch tasks that contains this failure reason .
- **parent_id** (*basestring*) – parentId query parameter. Fetch tasks that have this parent Id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_task_by_operationid(*limit, offset, operation_id, headers=None, **request_parameters*)

Returns root tasks associated with an Operationid .

Parameters

- **operation_id** (*basestring*) – operationId path parameter.
- **offset** (*int*) – offset path parameter. Index, minimum value is 0 .
- **limit** (*int*) – limit path parameter. The maximum value of {limit} supported is 500. Base 1 indexing for {limit}, minimum value is 1 .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_task_by_id(*task_id, headers=None, **request_parameters*)

Returns a task by specified id .

Parameters

- **task_id** (*basestring*) – taskId path parameter. UUID of the Task .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_task_tree(*task_id*, *headers=None*, ****request_parameters**)

Returns a task with its children tasks by based on their id .

Parameters

- **task_id** (*basestring*) – taskId path parameter. UUID of the Task .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

topology

class Topology

Cisco DNA Center Topology API (version: 2.2.2.3).

Wraps the DNA Center Topology API and exposes the API as native Python methods that return native Python objects.

get_overall_network_health(*timestamp=None*, *headers=None*, ****request_parameters**)

Returns Overall Network Health information by Device category (Access, Distribution, Core, Router, Wireless) for any given point of time .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the Network health data is required .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_topology_details(vlan_id, headers=None, **request_parameters)

Returns Layer 2 network topology by specified VLAN ID .

Parameters

- **vlan_id** (*basestring*) – vlanID path parameter. Vlan Name for e.g Vlan1, Vlan23 etc .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_l3_topology_details(topology_type, headers=None, **request_parameters)

Returns the Layer 3 network topology by routing protocol .

Parameters

- **topology_type** (*basestring*) – topologyType path parameter. Type of topology(OSPF,ISIS,etc) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_physical_topology(*node_type=None, headers=None, **request_parameters*)

Returns the raw physical topology by specified criteria of nodeType .

Parameters

- **node_type** (*basestring*) – nodeType query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site_topology(*headers=None, **request_parameters*)

Returns site topology .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_vlan_details(*headers=None, **request_parameters*)

Returns the list of VLAN names .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

users

class Users

Cisco DNA Center Users API (version: 2.2.2.3).

Wraps the DNA Center Users API and exposes the API as native Python methods that return native Python objects.

get_user_enrichment_details(*headers=None, **request_parameters*)

Enriches a given network End User context (a network user-id or end user's device Mac Address) with details about the user and devices that the user is connected to .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

wireless

class Wireless

Cisco DNA Center Wireless API (version: 2.2.2.3).

Wraps the DNA Center Wireless API and exposes the API as native Python methods that return native Python objects.

sensor_test_results(*end_time=None, site_id=None, start_time=None, test_failure_by=None, headers=None, **request_parameters*)

Intent API to get SENSOR test result summary .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Assurance site UUID .
- **start_time** (*int*) – startTime query parameter. The epoch time in milliseconds .
- **end_time** (*int*) – endTime query parameter. The epoch time in milliseconds .
- **test_failure_by** (*basestring*) – testFailureBy query parameter. Obtain failure statistics group by “area”, “building”, or “floor” .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_and_provision_ssid(*enableFabric=None, flexConnect=None, managedAPLocations=None, ssidDetails=None, ssidType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Creates SSID, updates the SSID to the corresponding site profiles and provision it to the devices matching the given sites .

Parameters

- **enableFabric** (*boolean*) – Wireless’s Enable SSID for Fabric .
- **flexConnect** (*object*) – Wireless’s flexConnect.
- **managedAPLocations** (*list*) – Wireless’s Managed AP Locations (Enter entire Site(s) hierarchy) (list of strings).
- **ssidDetails** (*object*) – Wireless’s ssidDetails.
- **ssidType** (*string*) – Wireless’s SSID Type . Available values are ‘Guest’ and ‘Enterprise’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_ssid_and_provision_it_to_devices(*managed_aplocations*, *ssid_name*, *headers=None*,
***request_parameters*)

Removes SSID or WLAN from the network profile, reprovision the device(s) and deletes the SSID or WLAN from DNA Center .

Parameters

- **ssid_name** (*basestring*) – ssidName path parameter.
- **managed_aplocations** (*basestring*) – managedAPLocations path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_enterprise_ssid(*ssid_name=None*, *headers=None*, ***request_parameters*)

Gets either one or all the enterprise SSID .

Parameters

- **ssid_name** (*basestring*) – ssidName query parameter. Enter the enterprise SSID name that needs to be retrieved. If not entered, all the enterprise SSIDs will be retrieved. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_enterprise_ssid(basicServiceSetClientIdleTimeout=None, clientExclusionTimeout=None,
    enableBasicServiceSetMaxIdle=None, enableBroadcastSSID=None,
    enableClientExclusion=None, enableDirectedMulticastService=None,
    enableFastLane=None, enableMACFiltering=None, enableNeighborList=None,
    enableSessionTimeOut=None, fastTransition=None, mfpClientProtection=None,
    name=None, passphrase=None, radioPolicy=None, securityLevel=None,
    sessionTimeOut=None, trafficType=None, headers=None, payload=None,
    active_validation=True, **request_parameters)
```

Creates enterprise SSID .

Parameters

- **basicServiceSetClientIdleTimeout** (*integer*) – Wireless’s Basic Service Set Client Idle Timeout .
- **clientExclusionTimeout** (*integer*) – Wireless’s Client Exclusion Timeout .
- **enableBasicServiceSetMaxIdle** (*boolean*) – Wireless’s Enable Basic Service Set Max Idle .
- **enableBroadcastSSID** (*boolean*) – Wireless’s Enable Broadcast SSID .
- **enableClientExclusion** (*boolean*) – Wireless’s Enable Client Exclusion .
- **enableDirectedMulticastService** (*boolean*) – Wireless’s Enable Directed Multicast Service .
- **enableFastLane** (*boolean*) – Wireless’s Enable Fast Lane .
- **enableMACFiltering** (*boolean*) – Wireless’s Enable MAC Filtering .
- **enableNeighborList** (*boolean*) – Wireless’s Enable Neighbor List .
- **enableSessionTimeOut** (*boolean*) – Wireless’s Enable Session Timeout .
- **fastTransition** (*string*) – Wireless’s Fast Transition . Available values are ‘Adaptive’, ‘Enable’ and ‘Disable’.
- **mfpClientProtection** (*string*) – Wireless’s Management Frame Protection Client . Available values are ‘Optional’, ‘Disabled’ and ‘Required’.
- **name** (*string*) – Wireless’s Enter SSID Name .
- **passphrase** (*string*) – Wireless’s Pass Phrase (Only applicable for SSID with PERSONAL security level) .
- **radioPolicy** (*string*) – Wireless’s Radio Policy . Available values are ‘Dual band operation (2.4GHz and 5GHz)’, ‘Dual band operation with band select’, ‘5GHz only’ and ‘2.4GHz only’.
- **securityLevel** (*string*) – Wireless’s Security Level . Available values are ‘WPA2_ENTERPRISE’, ‘WPA2_PERSONAL’ and ‘OPEN’.
- **sessionTimeOut** (*integer*) – Wireless’s Session Time Out .
- **trafficType** (*string*) – Wireless’s Traffic Type . Available values are ‘voicedata’ and ‘data’.

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_enterprise_ssid(*basicServiceSetClientIdleTimeout=None, clientExclusionTimeout=None, enableBasicServiceSetMaxIdle=None, enableBroadcastSSID=None, enableClientExclusion=None, enableDirectedMulticastService=None, enableFastLane=None, enableMACFiltering=None, enableNeighborList=None, enableSessionTimeOut=None, fastTransition=None, mfpClientProtection=None, name=None, passphrase=None, radioPolicy=None, securityLevel=None, sessionTimeOut=None, trafficType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Update enterprise SSID .

Parameters

- **basicServiceSetClientIdleTimeout** (*integer*) – Wireless's Basic Service Set Client Idle Timeout .
- **clientExclusionTimeout** (*integer*) – Wireless's Client Exclusion Timeout .
- **enableBasicServiceSetMaxIdle** (*boolean*) – Wireless's Enable Basic Service Set Max Idle .
- **enableBroadcastSSID** (*boolean*) – Wireless's Enable Broadcast SSID .
- **enableClientExclusion** (*boolean*) – Wireless's Enable Client Exclusion .
- **enableDirectedMulticastService** (*boolean*) – Wireless's Enable Directed Multicast Service .
- **enableFastLane** (*boolean*) – Wireless's Enable Fast Lane .
- **enableMACFiltering** (*boolean*) – Wireless's Enable MAC Filtering .
- **enableNeighborList** (*boolean*) – Wireless's Enable Neighbor List .
- **enableSessionTimeOut** (*boolean*) – Wireless's Enable Session Timeout .
- **fastTransition** (*string*) – Wireless's Fast Transition . Available values are 'Adaptive', 'Enable' and 'Disable'.
- **mfpClientProtection** (*string*) – Wireless's Management Frame Protection Client . Available values are 'Optional', 'Disabled' and 'Required'.
- **name** (*string*) – Wireless's Enter SSID Name .

- **passphrase** (*string*) – Wireless’s Pass Phrase (Only applicable for SSID with PERSONAL security level) .
- **radioPolicy** (*string*) – Wireless’s Radio Policy . Available values are ‘Dual band operation (2.4GHz and 5GHz)’, ‘Dual band operation with band select’, ‘5GHz only’ and ‘2.4GHz only’.
- **securityLevel** (*string*) – Wireless’s Security Level . Available values are ‘WPA2_ENTERPRISE’, ‘WPA2_PERSONAL’ and ‘OPEN’.
- **sessionTimeOut** (*integer*) – Wireless’s Session Time Out .
- **trafficType** (*string*) – Wireless’s Traffic Type . Available values are ‘voicedata’ and ‘data’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_enterprise_ssid(*ssid_name*, *headers=None*, ***request_parameters*)

Deletes given enterprise SSID .

Parameters

- **ssid_name** (*basestring*) – ssidName path parameter. Enter the SSID name to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_wireless_profile(*wireless_profile_name*, *headers=None*, ***request_parameters*)

Delete the Wireless Profile from DNAC whose name is provided. .

Parameters

- **wireless_profile_name** (*basestring*) – wirelessProfileName path parameter. Wireless Profile Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

ap_provision(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Access Point Provision and ReProvision .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_update_dynamic_interface(*interfaceName=None*, *vlanId=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

API to create or update an dynamic interface .

Parameters

- **interfaceName** (*string*) – Wireless's dynamic-interface name .
- **vlanId** (*number*) – Wireless's Vlan Id .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_dynamic_interface(*interface_name=None, headers=None, **request_parameters*)

Get one or all dynamic interface(s) .

Parameters

- **interface_name** (*basestring*) – interface-name query parameter. dynamic-interface name, if not specified all the existing dynamic interfaces will be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_dynamic_interface(*interface_name, headers=None, **request_parameters*)

Delete a dynamic interface .

Parameters

- **interface_name** (*basestring*) – interfaceName path parameter. valid interface-name to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_wireless_profile(*profileDetails=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates the wireless Network Profile with updated details provided. All sites to be present in the network profile should be provided. .

Parameters

- **profileDetails** (*object*) – Wireless's profileDetails.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_wireless_profile(*profileDetails=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Creates Wireless Network Profile on DNAC and associates sites and SSIDs to it. .

Parameters

- **profileDetails** (*object*) – Wireless's profileDetails.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_wireless_profile(*profile_name=None, headers=None, **request_parameters*)

Gets either one or all the wireless network profiles if no name is provided for network-profile. .

Parameters

- **profile_name** (*basestring*) – profileName query parameter. Wireless Network Profile Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

provision_update(*headers=None, payload=None, active_validation=True, **request_parameters*)

Updates wireless provisioning .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

provision(*headers=None, payload=None, active_validation=True, **request_parameters*)

Provision wireless devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

psk_override(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update/override pass phrase of enterprise SSID .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

retrieve_rf_profiles(*rf_profile_name=None, headers=None, **request_parameters*)

Retrieve all RF profiles .

Parameters

- **rf_profile_name** (*basestring*) – rf-profile-name query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_or_update_rf_profile(*channelWidth=None, defaultRfProfile=None, enableBrownField=None, enableCustom=None, enableRadioTypeA=None, enableRadioTypeB=None, name=None, radioTypeAProperties=None, radioTypeBProperties=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Create or Update RF profile .

Parameters

- **channelWidth** (*string*) – Wireless's rf-profile channel width .
- **defaultRfProfile** (*boolean*) – Wireless's isDefault rf-profile .
- **enableBrownField** (*boolean*) – Wireless's true if enable brown field for rf-profile else false .
- **enableCustom** (*boolean*) – Wireless's true if enable custom rf-profile else false .
- **enableRadioTypeA** (*boolean*) – Wireless's true if Enable Radio Type A else false .
- **enableRadioTypeB** (*boolean*) – Wireless's true if Enable Radio Type B else false .
- **name** (*string*) – Wireless's custom RF profile name .
- **radioTypeAProperties** (*object*) – Wireless's radioTypeAProperties.
- **radioTypeBProperties** (*object*) – Wireless's radioTypeBProperties.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_rf_profiles(*rf_profile_name*, *headers=None*, ***request_parameters*)

Delete RF profile(s) .

Parameters

- **rf_profile_name** (*basestring*) – rfProfileName path parameter. RF profile name to be deleted(required) non_custom RF profile cannot be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

DNACenterAPI v2.2.3.3

application_policy

class ApplicationPolicy

Cisco DNA Center Application Policy API (version: 2.2.3.3).

Wraps the DNA Center Application Policy API and exposes the API as native Python methods that return native Python objects.

get_application_policy(*policy_scope=None*, *headers=None*, ***request_parameters*)

Get all existing application policies .

Parameters

- **policy_scope** (*basestring*) – policyScope query parameter. policy scope name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_application_policy_default(*headers=None, **request_parameters*)

Get default application policy .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

application_policy_intent(*createList=None, deleteList=None, updateList=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Create/Update/Delete application policy .

Parameters

- **createList** (*list*) – Application Policy's createList (list of objects).
- **deleteList** (*list*) – Application Policy's Delete list of Group Based Policy ids (list of strings).
- **updateList** (*list*) – Application Policy's updateList (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_application_policy_queuing_profile(*name=None, headers=None, **request_parameters*)

Get all or by name, existing application policy queuing profiles .

Parameters

- **name** (*basestring*) – name query parameter. queuing profile name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_application_policy_queuing_profile(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update existing custom application queuing profile .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_application_policy_queuing_profile(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create new custom application queuing profile .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_application_policy_queuing_profile_count(*headers=None, **request_parameters*)

Get the number of all existing application policy queuing profile .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_application_policy_queuing_profile(*id, headers=None, **request_parameters*)

Delete existing custom application policy queuing profile by id .

Parameters

- **id** (*basestring*) – id path parameter. Id of custom queuing profile to delete .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_application_sets(*limit=None, name=None, offset=None, headers=None, **request_parameters*)

Get application-sets by offset/limit or by name .

Parameters

- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **name** (*basestring*) – name query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_application_set(*id, headers=None, **request_parameters*)

Delete existing application-set by it's id .

Parameters

- **id** (*basestring*) – id query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_application_set(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create new custom application-set/s .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_application_sets_count(*headers=None, **request_parameters*)

Get the number of existing application-sets .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_application(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create new Custom application .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

edit_application(*headers=None, payload=None, active_validation=True, **request_parameters*)

Edit the attributes of an existing application .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_application(*id, headers=None, **request_parameters*)

Delete existing application by its id .

Parameters

- **id** (*basestring*) – id query parameter. Application's Id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_applications(*limit=None, name=None, offset=None, headers=None, **request_parameters*)

Get applications by offset/limit or by name .

Parameters

- **offset** (*int*) – offset query parameter. The offset of the first application to be returned .
- **limit** (*int*) – limit query parameter. The maximum number of applications to be returned .
- **name** (*basestring*) – name query parameter. Application's name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_applications_count(*headers=None, **request_parameters*)

Get the number of all existing applications .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_qos_device_interface_info(*network_device_id=None, headers=None, **request_parameters*)

Get all or by network device id, existing qos device interface infos .

Parameters

- **network_device_id** (*basestring*) – networkDeviceId query parameter. network device id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_qos_device_interface_info(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update existing qos device interface infos associate with network device id .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_qos_device_interface_info(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create qos device interface infos associate with network device id to allow the user to mark specific interfaces as WAN, to associate WAN interfaces with specific SP Profile and to be able to define a shaper on WAN interfaces .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_qos_device_interface_info_count(*headers=None, **request_parameters*)

Get the number of all existing qos device interface infos group by network device id .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_qos_device_interface_info(*id, headers=None, **request_parameters*)

Delete all qos device interface infos associate with network device id .

Parameters

- **id** (*basestring*) – id path parameter. Id of the qos device info, this object holds all qos device interface infos associate with network device id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

applications

class Applications

Cisco DNA Center Applications API (version: 2.2.3.3).

Wraps the DNA Center Applications API and exposes the API as native Python methods that return native Python objects.

applications(*application_health=None, application_name=None, device_id=None, end_time=None, limit=None, mac_address=None, offset=None, site_id=None, start_time=None, headers=None, **request_parameters*)

Intent API to get a list of applications for a specific site, a device, or a client device's MAC address. For a combination of a specific application with site and/or device the API gets list of issues/devices/endpoints. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Assurance site UUID value (Cannot be submitted together with deviceId and clientMac) .
- **device_id** (*basestring*) – deviceId query parameter. Assurance device UUID value (Cannot be submitted together with siteId and clientMac) .
- **mac_address** (*basestring*) – macAddress query parameter. Client device's MAC address (Cannot be submitted together with siteId and deviceId) .
- **start_time** (*int*) – startTime query parameter. Starting epoch time in milliseconds of time window .
- **end_time** (*int*) – endTime query parameter. Ending epoch time in milliseconds of time window .
- **application_health** (*basestring*) – applicationHealth query parameter. Application health category (POOR, FAIR, or GOOD. Optionally use with siteId only) .
- **offset** (*int*) – offset query parameter. The offset of the first application in the returned data (optionally used with siteId only) .
- **limit** (*int*) – limit query parameter. The max number of application entries in returned data [1, 1000] (optionally used with siteId only) .
- **application_name** (*basestring*) – applicationName query parameter. The name of the application to get information on .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

authentication_management

class AuthenticationManagement

Cisco DNA Center Authentication Management API (version: 2.2.3.3).

Wraps the DNA Center Authentication Management API and exposes the API as native Python methods that return native Python objects.

import_certificate(*multipart_fields*, *multipart_monitor_callback*, *list_of_users=None*, *pk_password=None*, *headers=None*, ***request_parameters*)

This method is used to upload a certificate. Upload the files to the **certFileUpload** and **pkFileUpload** form data fields .

The following code gives an example of the *multipart_fields*.

```
multipart_fields={'file': ('file.zip', open('file.zip', 'rb'))}
multipart_fields={'file': ('file.txt', open('file.txt', 'rb')),
                  'text/plain',
                  {'X-My-Header': 'my-value'}}}
multipart_fields=[('images', ('foo.png', open('foo.png', 'rb'),
                              'image/png')),
                  ('images', ('bar.png', open('bar.png', 'rb'), 'image/png'))]
```

The following example demonstrates how to use *multipart_monitor_callback=create_callback* to create a progress bar using clint.

```
from clint.textui.progress import Bar
def create_callback(encoder):
    encoder_len = encoder.len
    bar = Bar(expected_size=encoder_len,
              filled_char="=")
    def callback(monitor):
        bar.show(monitor.bytes_read)
    return callback
```

Parameters

- **pk_password** (*basestring*) – pkPassword query parameter. Private Key Password .
- **list_of_users** (*basestring*, *list*, *set*, *tuple*) – listOfUsers query parameter.

- **multipart_fields** (*dict*) – Fields from which to create a multipart/form-data body.
- **multipart_monitor_callback** (*function*) – function used to monitor the progress of the upload.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
import_certificate_p12(multipart_fields, multipart_monitor_callback, list_of_users=None,
                      p12_password=None, pk_password=None, headers=None,
                      **request_parameters)
```

This method is used to upload a PKCS#12 file. Upload the file to the **p12FileUpload** form data field .

The following code gives an example of the multipart_fields.

```
multipart_fields={'file': ('file.zip', open('file.zip', 'rb'))}
multipart_fields={'file': ('file.txt', open('file.txt', 'rb'),
                           'text/plain',
                           {'X-My-Header': 'my-value'})}
multipart_fields=[('images', ('foo.png', open('foo.png', 'rb'),
                              'image/png')),
                  ('images', ('bar.png', open('bar.png', 'rb'), 'image/png'))]
```

The following example demonstrates how to use *multipart_monitor_callback=create_callback* to create a progress bar using clint.

```
from clint.textui.progress import Bar
def create_callback(encoder):
    encoder_len = encoder.len
    bar = Bar(expected_size=encoder_len,
              filled_char="=")
    def callback(monitor):
        bar.show(monitor.bytes_read)
    return callback
```

Parameters

- **p12_password** (*basestring*) – p12Password query parameter. P12 Passsword .
- **pk_password** (*basestring*) – pkPassword query parameter. Private Key Passsword .
- **list_of_users** (*basestring*, *list*, *set*, *tuple*) – listOfUsers query parameter.
- **multipart_fields** (*dict*) – Fields from which to create a multipart/form-data body.

- **multipart_monitor_callback** (*function*) – function used to monitor the progress of the upload.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

clients

class Clients

Cisco DNA Center Clients API (version: 2.2.3.3).

Wraps the DNA Center Clients API and exposes the API as native Python methods that return native Python objects.

get_client_detail(*mac_address*, *timestamp=None*, *headers=None*, ***request_parameters*)

Returns detailed Client information retrieved by Mac Address for any given point of time. .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the Client health data is required .
- **mac_address** (*basestring*) – macAddress query parameter. MAC Address of the client .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_client_enrichment_details(*headers=None, **request_parameters*)

Enriches a given network End User context (a network user-id or end user's device Mac Address) with details about the user, the devices that the user is connected to and the assurance issues that the user is impacted by .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_overall_client_health(*timestamp=None, headers=None, **request_parameters*)

Returns Overall Client Health information by Client type (Wired and Wireless) for any given point of time .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the Client health data is required .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

client_proximity(*username, number_days=None, time_resolution=None, headers=None, **request_parameters*)

This intent API will provide client proximity information for a specific wireless user. Proximity is defined as presence on the same floor at the same time as the specified wireless user. The Proximity workflow requires the subscription to the following event (via the Event Notification workflow) prior to making this API call: NETWORK-CLIENTS-3-506 Client Proximity Report. .

Parameters

- **username** (*basestring*) – username query parameter. Wireless client username for which proximity information is required .
- **number_days** (*int*) – number_days query parameter. Number of days to track proximity until current date. Defaults and maximum up to 14 days. .
- **time_resolution** (*int*) – time_resolution query parameter. Time interval (in minutes) to measure proximity. Defaults to 15 minutes with a minimum 5 minutes. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

command_runner

class CommandRunner

Cisco DNA Center Command Runner API (version: 2.2.3.3).

Wraps the DNA Center Command Runner API and exposes the API as native Python methods that return native Python objects.

get_all_keywords_of_clis_accepted(*headers=None, **request_parameters*)

Get valid keywords .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
run_read_only_commands_on_devices(commands=None, description=None, deviceUuids=None,  
name=None, timeout=None, headers=None, payload=None,  
active_validation=True, **request_parameters)
```

Submit request for read-only CLIs .

Parameters

- **commands** (*list*) – Command Runner’s commands (list of strings).
- **description** (*string*) – Command Runner’s description.
- **deviceUuids** (*list*) – Command Runner’s deviceUuids (list of strings).
- **name** (*string*) – Command Runner’s name.
- **timeout** (*integer*) – Command Runner’s timeout.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

compliance

class Compliance

Cisco DNA Center Compliance API (version: 2.2.3.3).

Wraps the DNA Center Compliance API and exposes the API as native Python methods that return native Python objects.

```
get_compliance_status_(compliance_status=None, device_uuid=None, limit=None, offset=None,  
headers=None, **request_parameters)
```

Return compliance status of device(s). .

Parameters

- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can be have value among ‘COMPLIANT’, ‘NON_COMPLIANT’, ‘IN_PROGRESS’, ‘ERROR’ .
- **device_uuid** (*basestring*) – deviceUuid query parameter. Comma separated deviceUuids .
- **offset** (*int*) – offset query parameter. offset/starting row .

- **limit** (*int*) – limit query parameter. Number of records to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_compliance_status(*compliance_status=None, device_uuid=None, limit=None, offset=None, headers=None, **request_parameters*)

Return compliance status of device(s). .

Parameters

- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can be have value among 'COMPLIANT','NON_COMPLIANT','IN_PROGRESS', 'ERROR' .
- **device_uuid** (*basestring*) – deviceUuid query parameter. Comma separated deviceU-uids .
- **offset** (*int*) – offset query parameter. offset/starting row .
- **limit** (*int*) – limit query parameter. Number of records to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

run_compliance(*categories=None, deviceUuids=None, triggerFull=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Run compliance check for device(s). .

Parameters

- **categories** (*list*) – Compliance's categories (list of strings).

- **deviceUids** (*list*) – Compliance’s deviceUids (list of strings).
- **triggerFull** (*boolean*) – Compliance’s triggerFull.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_compliance_status_count(*compliance_status=None, headers=None, **request_parameters*)

Return Compliance Status Count .

Parameters

- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can have value among ‘COMPLIANT’, ‘NON_COMPLIANT’, ‘IN_PROGRESS’, ‘NOT_AVAILABLE’, ‘NOT_APPLICABLE’, ‘ERROR’ .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_compliance_detail(*compliance_status=None, compliance_type=None, device_uuid=None, limit=None, offset=None, headers=None, **request_parameters*)

Return Compliance Detail .

Parameters

- **compliance_type** (*basestring*) – complianceType query parameter. compliance-Type can have any value among ‘NETWORK_PROFILE’, ‘IMAGE’, ‘APPLICATION_VISIBILITY’, ‘FABRIC’, ‘PSIRT’, ‘RUNNING_CONFIG’, ‘WORKFLOW’ .

- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can have value among ‘COMPLIANT’, ‘NON_COMPLIANT’, ‘IN_PROGRESS’, ‘NOT_AVAILABLE’, ‘NOT_APPLICABLE’, ‘ERROR’ .
- **device_uuid** (*basestring*) – deviceUuid query parameter. Comma separated deviceU-uids .
- **offset** (*basestring*) – offset query parameter. offset/starting row .
- **limit** (*basestring*) – limit query parameter. Number of records to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_compliance_detail_count(*compliance_status=None, compliance_type=None, headers=None, **request_parameters*)

Return Compliance Count Detail .

Parameters

- **compliance_type** (*basestring*) – complianceType query parameter. compliance-Type can have any value among ‘NETWORK_PROFILE’, ‘IMAGE’, ‘APPLICATION_VISIBILITY’, ‘FABRIC’, ‘PSIRT’, ‘RUNNING_CONFIG’, ‘WORKFLOW’. .
- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can have value among ‘COMPLIANT’, ‘NON_COMPLIANT’, ‘IN_PROGRESS’, ‘NOT_AVAILABLE’, ‘NOT_APPLICABLE’, ‘ERROR’ .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_compliance_status(*device_uuid*, *headers=None*, ***request_parameters*)

Return compliance status of a device. .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

compliance_details_of_device(*device_uuid*, *category=None*, *compliance_type=None*, *diff_list=None*, *key=None*, *value=None*, *headers=None*, ***request_parameters*)

Return compliance detailed report for a device. .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter.
- **category** (*basestring*) – category query parameter. complianceCategory can have any value among 'INTENT', 'RUNNING_CONFIG' .
- **compliance_type** (*basestring*) – complianceType query parameter. complianceType can have any value among 'NETWORK_DESIGN', 'NETWORK_PROFILE', 'FABRIC', 'POLICY', 'RUNNING_CONFIG' .
- **diff_list** (*bool*) – diffList query parameter. diff list [pass true to fetch the diff list] .
- **key** (*basestring*) – key query parameter. extended attribute key .
- **value** (*basestring*) – value query parameter. extended attribute value .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

configuration_archive

class ConfigurationArchive

Cisco DNA Center Configuration Archive API (version: 2.2.3.3).

Wraps the DNA Center Configuration Archive API and exposes the API as native Python methods that return native Python objects.

export_device_configurations(*deviceId=None, password=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Export Device configurations to an encrypted zip file. .

Parameters

- **deviceId** (*list*) – Configuration Archive’s Device Id (list of strings).
- **password** (*string*) – Configuration Archive’s Password.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

configuration_templates

class ConfigurationTemplates

Cisco DNA Center Configuration Templates API (version: 2.2.3.3).

Wraps the DNA Center Configuration Templates API and exposes the API as native Python methods that return native Python objects.

clone_given_template(*name, project_id, template_id, headers=None, **request_parameters*)

API to clone template .

Parameters

- **name** (*basestring*) – name path parameter. Template name to clone template(Name should be different than existing template name within same project) .

- **template_id** (*basestring*) – templateId path parameter. UUID of the template to clone it .
- **project_id** (*basestring*) – projectId path parameter. UUID of the project in which the template needs to be created .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_project(*createTime=None, description=None, id=None, lastUpdateTime=None, name=None, tags=None, templates=None, headers=None, payload=None, active_validation=True, **request_parameters*)

This API is used to create a new project. .

Parameters

- **createTime** (*integer*) – Configuration Templates's Create time of project .
- **description** (*string*) – Configuration Templates's Description of project .
- **id** (*string*) – Configuration Templates's UUID of project .
- **lastUpdateTime** (*integer*) – Configuration Templates's Update time of project .
- **name** (*string*) – Configuration Templates's Name of project .
- **tags** (*list*) – Configuration Templates's tags (list of objects).
- **templates** (*list*) – Configuration Templates's List of templates within the project (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_project(*createTime=None, description=None, id=None, lastUpdateTime=None, name=None, tags=None, templates=None, headers=None, payload=None, active_validation=True, **request_parameters*)

This API is used to update an existing project. .

Parameters

- **createTime** (*integer*) – Configuration Templates's Create time of project .
- **description** (*string*) – Configuration Templates's Description of project .
- **id** (*string*) – Configuration Templates's UUID of project .
- **lastUpdateTime** (*integer*) – Configuration Templates's Update time of project .
- **name** (*string*) – Configuration Templates's Name of project .
- **tags** (*list*) – Configuration Templates's tags (list of objects).
- **templates** (*list*) – Configuration Templates's List of templates within the project (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_projects(*name=None, sort_order=None, headers=None, **request_parameters*)

List the projects .

Parameters

- **name** (*basestring*) – name query parameter. Name of project to be searched .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

`list`

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
imports_the_projects_provided(do_version=None, headers=None, payload=None,  
                             **request_parameters)
```

Imports the Projects provided in the DTO .

Parameters

- **do_version** (`bool`) – doVersion query parameter. If this flag is true then it creates a new version of the template with the imported contents in case if the templates already exists. ” If this flag is false and if template already exists, then operation fails with ‘Template already exists’ error .
- **headers** (`dict`) – Dictionary of HTTP Headers to send with the Request .
- **payload** (`basestring`) – A string object to send in the body of the Request.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

`MyDict`

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
export_projects(headers=None, payload=None, active_validation=True, **request_parameters)
```

Exports the projects for given projectNames. .

Parameters

- **headers** (`dict`) – Dictionary of HTTP Headers to send with the Request .
- **payload** (`list`) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (`bool`) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
imports_the_templates_provided(project_name, do_version=None, headers=None, payload=None,
                               active_validation=True, **request_parameters)
```

Imports the templates provided in the DTO by project Name .

Parameters

- **project_name** (*basestring*) – projectName path parameter. Project name to create template under the project .
- **do_version** (*bool*) – doVersion query parameter. If this flag is true then it creates a new version of the template with the imported contents in case if the templates already exists. ” If this flag is false and if template already exists, then operation fails with ‘Template already exists’ error .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_project_details(project_id, headers=None, **request_parameters)
```

Get the details of the given project by its id. .

Parameters

- **project_id** (*basestring*) – projectId path parameter. projectId(UUID) of project to get project details .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deletes_the_project(*project_id*, *headers=None*, ***request_parameters*)

Deletes the project by its id .

Parameters

- **project_id** (*basestring*) – projectId path parameter. projectId(UUID) of project to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_template(*project_id*, *author=None*, *composite=None*, *containingTemplates=None*, *createTime=None*, *customParamsOrder=None*, *description=None*, *deviceTypes=None*, *failurePolicy=None*, *id=None*, *language=None*, *lastUpdateTime=None*, *latestVersionTime=None*, *name=None*, *parentTemplateId=None*, *projectId=None*, *projectName=None*, *rollbackTemplateContent=None*, *rollbackTemplateParams=None*, *softwareType=None*, *softwareVariant=None*, *softwareVersion=None*, *tags=None*, *templateContent=None*, *templateParams=None*, *validationErrors=None*, *version=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

API to create a template by project id. .

Parameters

- **author** (*string*) – Configuration Templates's Author of template .
- **composite** (*boolean*) – Configuration Templates's Is it composite template .
- **containingTemplates** (*list*) – Configuration Templates's containingTemplates (list of objects).
- **createTime** (*integer*) – Configuration Templates's Create time of template .
- **customParamsOrder** (*boolean*) – Configuration Templates's Custom Params Order .
- **description** (*string*) – Configuration Templates's Description of template .
- **deviceTypes** (*list*) – Configuration Templates's deviceTypes (list of objects).

- **failurePolicy** (*string*) – Configuration Templates's Define failure policy if template provisioning fails . Available values are 'ABORT_ON_ERROR', 'CONTINUE_ON_ERROR', 'ROLLBACK_ON_ERROR', 'ROLLBACK_TARGET_ON_ERROR' and 'ABORT_TARGET_ON_ERROR'.
- **id** (*string*) – Configuration Templates's UUID of template .
- **language** (*string*) – Configuration Templates's Template language (JINJA or VELOCITY) .
- **lastUpdateTime** (*integer*) – Configuration Templates's Update time of template .
- **latestVersionTime** (*integer*) – Configuration Templates's Latest versioned template time .
- **name** (*string*) – Configuration Templates's Name of template .
- **parentTemplateId** (*string*) – Configuration Templates's Parent templateID .
- **projectId** (*string*) – Configuration Templates's Project UUID .
- **projectName** (*string*) – Configuration Templates's Project name .
- **rollbackTemplateContent** (*string*) – Configuration Templates's Rollback template content .
- **rollbackTemplateParams** (*list*) – Configuration Templates's rollbackTemplateParams (list of objects).
- **softwareType** (*string*) – Configuration Templates's Applicable device software type .
- **softwareVariant** (*string*) – Configuration Templates's Applicable device software variant .
- **softwareVersion** (*string*) – Configuration Templates's Applicable device software version .
- **tags** (*list*) – Configuration Templates's tags (list of objects).
- **templateContent** (*string*) – Configuration Templates's Template content .
- **templateParams** (*list*) – Configuration Templates's templateParams (list of objects).
- **validationErrors** (*object*) – Configuration Templates's validationErrors.
- **version** (*string*) – Configuration Templates's Current version of template .
- **project_id** (*basestring*) – projectId path parameter. UUID of the project in which the template needs to be created .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
gets_the_templates_available(filter_conflicting_templates=None, product_family=None,  
                             product_series=None, product_type=None, project_id=None,  
                             project_names=None, software_type=None, software_version=None,  
                             sort_order=None, tags=None, un_committed=None, headers=None,  
                             **request_parameters)
```

List the templates available .

Parameters

- **project_id** (*basestring*) – projectId query parameter. Filter template(s) based on project UUID .
- **software_type** (*basestring*) – softwareType query parameter. Filter template(s) based software type .
- **software_version** (*basestring*) – softwareVersion query parameter. Filter template(s) based softwareVersion .
- **product_family** (*basestring*) – productFamily query parameter. Filter template(s) based on device family .
- **product_series** (*basestring*) – productSeries query parameter. Filter template(s) based on device series .
- **product_type** (*basestring*) – productType query parameter. Filter template(s) based on device type .
- **filter_conflicting_templates** (*bool*) – filterConflictingTemplates query parameter. Filter template(s) based on confliting templates .
- **tags** (*basestring*, *list*, *set*, *tuple*) – tags query parameter. Filter template(s) based on tags .
- **project_names** (*basestring*, *list*, *set*, *tuple*) – projectNames query parameter. Filter template(s) based on project names .
- **un_committed** (*bool*) – unCommitted query parameter. Filter template(s) based on template committed or not .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

update_template(*author=None, composite=None, containingTemplates=None, createTime=None, customParamsOrder=None, description=None, deviceTypes=None, failurePolicy=None, id=None, language=None, lastUpdateTime=None, latestVersionTime=None, name=None, parentTemplateId=None, projectId=None, projectName=None, rollbackTemplateContent=None, rollbackTemplateParams=None, softwareType=None, softwareVariant=None, softwareVersion=None, tags=None, templateContent=None, templateParams=None, validationErrors=None, version=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to update a template. .

Parameters

- **author** (*string*) – Configuration Templates's Author of template .
- **composite** (*boolean*) – Configuration Templates's Is it composite template .
- **containingTemplates** (*list*) – Configuration Templates's containingTemplates (list of objects).
- **createTime** (*integer*) – Configuration Templates's Create time of template .
- **customParamsOrder** (*boolean*) – Configuration Templates's Custom Params Order .
- **description** (*string*) – Configuration Templates's Description of template .
- **deviceTypes** (*list*) – Configuration Templates's deviceTypes (list of objects).
- **failurePolicy** (*string*) – Configuration Templates's Define failure policy if template provisioning fails . Available values are 'ABORT_ON_ERROR', 'CONTINUE_ON_ERROR', 'ROLLBACK_ON_ERROR', 'ROLLBACK_TARGET_ON_ERROR' and 'ABORT_TARGET_ON_ERROR'.
- **id** (*string*) – Configuration Templates's UUID of template .
- **language** (*string*) – Configuration Templates's Template language (JINJA or VELOCITY) .
- **lastUpdateTime** (*integer*) – Configuration Templates's Update time of template .
- **latestVersionTime** (*integer*) – Configuration Templates's Latest versioned template time .
- **name** (*string*) – Configuration Templates's Name of template .
- **parentTemplateId** (*string*) – Configuration Templates's Parent templateID .
- **projectId** (*string*) – Configuration Templates's Project UUID .
- **projectName** (*string*) – Configuration Templates's Project name .
- **rollbackTemplateContent** (*string*) – Configuration Templates's Rollback template content .
- **rollbackTemplateParams** (*list*) – Configuration Templates's rollbackTemplateParams (list of objects).
- **softwareType** (*string*) – Configuration Templates's Applicable device software type .
- **softwareVariant** (*string*) – Configuration Templates's Applicable device software variant .
- **softwareVersion** (*string*) – Configuration Templates's Applicable device software version .

- **tags** (*list*) – Configuration Templates’s tags (list of objects).
- **templateContent** (*string*) – Configuration Templates’s Template content .
- **templateParams** (*list*) – Configuration Templates’s templateParams (list of objects).
- **validationErrors** (*object*) – Configuration Templates’s validationErrors.
- **version** (*string*) – Configuration Templates’s Current version of template .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deploy_template(*forcePushTemplate=None, isComposite=None, mainTemplateId=None, memberTemplateDeploymentInfo=None, targetInfo=None, templateId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to deploy a template. .

Parameters

- **forcePushTemplate** (*boolean*) – Configuration Templates’s forcePushTemplate.
- **isComposite** (*boolean*) – Configuration Templates’s Composite template flag .
- **mainTemplateId** (*string*) – Configuration Templates’s Main template UUID of versioned template .
- **memberTemplateDeploymentInfo** (*list*) – Configuration Templates’s memberTemplateDeploymentInfo (list of objects).
- **targetInfo** (*list*) – Configuration Templates’s targetInfo (list of objects).
- **templateId** (*string*) – Configuration Templates’s UUID of template to be provisioned .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_template_deployment_status(*deployment_id*, *headers=None*, ***request_parameters*)

API to retrieve the status of template deployment. .

Parameters

- **deployment_id** (*basestring*) – deploymentId path parameter. UUID of deployment to retrieve template deployment status .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

export_templates(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Exports the templates for given templateIds. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

preview_template(*deviceId=None, params=None, resourceParams=None, templateId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to preview a template. .

Parameters

- **deviceId** (*string*) – Configuration Templates’s UUID of device to get template preview .
- **params** (*object*) – Configuration Templates’s Params to render preview .
- **resourceParams** (*list*) – Configuration Templates’s Resource params to render preview (list of objects).
- **templateId** (*string*) – Configuration Templates’s UUID of template to get template preview .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

version_template(*comments=None, templateId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to version the current contents of the template. .

Parameters

- **comments** (*string*) – Configuration Templates’s Template version comments .
- **templateId** (*string*) – Configuration Templates’s UUID of template .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_template_versions(*template_id*, *headers=None*, ***request_parameters*)

Get all the versions of template by its id .

Parameters

- **template_id** (*basestring*) – templateId path parameter. templateId(UUID) to get list of versioned templates .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deletes_the_template(*template_id*, *headers=None*, ***request_parameters*)

Deletes the template by its id .

Parameters

- **template_id** (*basestring*) – templateId path parameter. templateId(UUID) of template to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_template_details(*template_id*, *latest_version=None*, *headers=None*, ***request_parameters*)

Details of the template by its id .

Parameters

- **template_id** (*basestring*) – templateId path parameter. TemplateId(UUID) to get details of the template .
- **latest_version** (*bool*) – latestVersion query parameter. latestVersion flag to get the latest versioned template .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_projects_details(*id=None*, *limit=None*, *name=None*, *offset=None*, *sort_order=None*, *headers=None*, ***request_parameters*)

Get project(s) details .

Parameters

- **id** (*basestring*) – id query parameter. Id of project to be searched .
- **name** (*basestring*) – name query parameter. Name of project to be searched .
- **offset** (*int*) – offset query parameter. Index of first result .
- **limit** (*int*) – limit query parameter. Limits number of results .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (dsc) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

```
get_templates_details(all_template_attributes=None, filter_conflicting_templates=None, id=None,
    include_version_details=None, limit=None, name=None, offset=None,
    product_family=None, product_series=None, product_type=None,
    project_id=None, project_name=None, software_type=None,
    software_version=None, sort_order=None, tags=None, un_committed=None,
    headers=None, **request_parameters)
```

Get template(s) details .

Parameters

- **id** (*basestring*) – id query parameter. Id of template to be searched .
- **name** (*basestring*) – name query parameter. Name of template to be searched .
- **project_id** (*basestring*) – projectId query parameter. Filter template(s) based on project id .
- **project_name** (*basestring*) – projectName query parameter. Filter template(s) based on project name .
- **software_type** (*basestring*) – softwareType query parameter. Filter template(s) based software type .
- **software_version** (*basestring*) – softwareVersion query parameter. Filter template(s) based softwareVersion .
- **product_family** (*basestring*) – productFamily query parameter. Filter template(s) based on device family .
- **product_series** (*basestring*) – productSeries query parameter. Filter template(s) based on device series .
- **product_type** (*basestring*) – productType query parameter. Filter template(s) based on device type .
- **filter_conflicting_templates** (*bool*) – filterConflictingTemplates query parameter. Filter template(s) based on confliting templates .
- **tags** (*basestring, list, set, tuple*) – tags query parameter. Filter template(s) based on tags .
- **un_committed** (*bool*) – unCommitted query parameter. Return uncommitted template .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (dsc) .
- **all_template_attributes** (*bool*) – allTemplateAttributes query parameter. Return all template attributes .
- **include_version_details** (*bool*) – includeVersionDetails query parameter. Include template version details .
- **offset** (*int*) – offset query parameter. Index of first result .
- **limit** (*int*) – limit query parameter. Limits number of results .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deploy_template_v2(*forcePushTemplate=None, isComposite=None, mainTemplateId=None, memberTemplateDeploymentInfo=None, targetInfo=None, templateId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

V2 API to deploy a template. .

Parameters

- **forcePushTemplate** (*boolean*) – Configuration Templates's forcePushTemplate.
- **isComposite** (*boolean*) – Configuration Templates's Composite template flag .
- **mainTemplateId** (*string*) – Configuration Templates's Main template UUID of versioned template .
- **memberTemplateDeploymentInfo** (*list*) – Configuration Templates's memberTemplateDeploymentInfo (list of objects).
- **targetInfo** (*list*) – Configuration Templates's targetInfo (list of objects).
- **templateId** (*string*) – Configuration Templates's UUID of template to be provisioned .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_onboarding_pnp

class DeviceOnboardingPnp

Cisco DNA Center Device Onboarding (PnP) API (version: 2.2.3.3).

Wraps the DNA Center Device Onboarding (PnP) API and exposes the API as native Python methods that return native Python objects.

```
add_device(_id=None, deviceInfo=None, runSummaryList=None, systemResetWorkflow=None,
            systemWorkflow=None, tenantId=None, version=None, workflow=None,
            workflowParameters=None, headers=None, payload=None, active_validation=True,
            **request_parameters)
```

Adds a device to the PnP database. .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)’s _id.
- **deviceInfo** (*object*) – Device Onboarding (PnP)’s deviceInfo.
- **runSummaryList** (*list*) – Device Onboarding (PnP)’s runSummaryList (list of objects).
- **systemResetWorkflow** (*object*) – Device Onboarding (PnP)’s systemResetWorkflow.
- **systemWorkflow** (*object*) – Device Onboarding (PnP)’s systemWorkflow.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **version** (*integer*) – Device Onboarding (PnP)’s version.
- **workflow** (*object*) – Device Onboarding (PnP)’s workflow.
- **workflowParameters** (*object*) – Device Onboarding (PnP)’s workflowParameters.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_device_list(cm_state=None, hostname=None, last_contact=None, limit=None, mac_address=None,
                name=None, offset=None, onb_state=None, pid=None, project_id=None,
                project_name=None, serial_number=None, site_name=None, smart_account_id=None,
                sort=None, sort_order=None, source=None, state=None, virtual_account_id=None,
                workflow_id=None, workflow_name=None, headers=None, **request_parameters)
```

Returns list of devices based on filter criteria. If a limit is not specified, it will default to return 50 devices. Pagination and sorting are also supported by this endpoint .

Parameters

- **limit** (*int*) – limit query parameter. Limits number of results .
- **offset** (*int*) – offset query parameter. Index of first result .
- **sort** (*basestring*, *list*, *set*, *tuple*) – sort query parameter. Comma seperated list of fields to sort on .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **serial_number** (*basestring*, *list*, *set*, *tuple*) – serialNumber query parameter. Device Serial Number .
- **state** (*basestring*, *list*, *set*, *tuple*) – state query parameter. Device State .
- **onb_state** (*basestring*, *list*, *set*, *tuple*) – onbState query parameter. Device Onboarding State .
- **cm_state** (*basestring*, *list*, *set*, *tuple*) – cmState query parameter. Device Connection Manager State .
- **name** (*basestring*, *list*, *set*, *tuple*) – name query parameter. Device Name .
- **pid** (*basestring*, *list*, *set*, *tuple*) – pid query parameter. Device ProductId .
- **source** (*basestring*, *list*, *set*, *tuple*) – source query parameter. Device Source .
- **project_id** (*basestring*, *list*, *set*, *tuple*) – projectId query parameter. Device Project Id .
- **workflow_id** (*basestring*, *list*, *set*, *tuple*) – workflowId query parameter. Device Workflow Id .
- **project_name** (*basestring*, *list*, *set*, *tuple*) – projectName query parameter. Device Project Name .
- **workflow_name** (*basestring*, *list*, *set*, *tuple*) – workflowName query parameter. Device Workflow Name .
- **smart_account_id** (*basestring*, *list*, *set*, *tuple*) – smartAccountId query parameter. Device Smart Account .
- **virtual_account_id** (*basestring*, *list*, *set*, *tuple*) – virtualAccountId query parameter. Device Virtual Account .
- **last_contact** (*bool*) – lastContact query parameter. Device Has Contacted lastContact > 0 .
- **mac_address** (*basestring*) – macAddress query parameter. Device Mac Address .
- **hostname** (*basestring*) – hostname query parameter. Device Hostname .
- **site_name** (*basestring*) – siteName query parameter. Device Site Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

`list`

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

claim_device(*configFileUrl=None, configId=None, deviceClaimList=None, fileServiceId=None, imageId=None, imageUrl=None, populateInventory=None, projectId=None, workflowId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Claims one of more devices with specified workflow .

Parameters

- **configFileUrl** (*string*) – Device Onboarding (PnP)'s configFileUrl.
- **configId** (*string*) – Device Onboarding (PnP)'s configId.
- **deviceClaimList** (*list*) – Device Onboarding (PnP)'s deviceClaimList (list of objects).
- **fileServiceId** (*string*) – Device Onboarding (PnP)'s fileServiceId.
- **imageId** (*string*) – Device Onboarding (PnP)'s imageId.
- **imageUrl** (*string*) – Device Onboarding (PnP)'s imageUrl.
- **populateInventory** (*boolean*) – Device Onboarding (PnP)'s populateInventory.
- **projectId** (*string*) – Device Onboarding (PnP)'s projectId.
- **workflowId** (*string*) – Device Onboarding (PnP)'s workflowId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_device_count(cm_state=None, last_contact=None, name=None, onb_state=None, pid=None,
                  project_id=None, project_name=None, serial_number=None, smart_account_id=None,
                  source=None, state=None, virtual_account_id=None, workflow_id=None,
                  workflow_name=None, headers=None, **request_parameters)
```

Returns the device count based on filter criteria. This is useful for pagination .

Parameters

- **serial_number** (*basestring*, *list*, *set*, *tuple*) – serialNumber query parameter. Device Serial Number .
- **state** (*basestring*, *list*, *set*, *tuple*) – state query parameter. Device State .
- **onb_state** (*basestring*, *list*, *set*, *tuple*) – onbState query parameter. Device Onboarding State .
- **cm_state** (*basestring*, *list*, *set*, *tuple*) – cmState query parameter. Device Connection Manager State .
- **name** (*basestring*, *list*, *set*, *tuple*) – name query parameter. Device Name .
- **pid** (*basestring*, *list*, *set*, *tuple*) – pid query parameter. Device ProductId .
- **source** (*basestring*, *list*, *set*, *tuple*) – source query parameter. Device Source .
- **project_id** (*basestring*, *list*, *set*, *tuple*) – projectId query parameter. Device Project Id .
- **workflow_id** (*basestring*, *list*, *set*, *tuple*) – workflowId query parameter. Device Workflow Id .
- **project_name** (*basestring*, *list*, *set*, *tuple*) – projectName query parameter. Device Project Name .
- **workflow_name** (*basestring*, *list*, *set*, *tuple*) – workflowName query parameter. Device Workflow Name .
- **smart_account_id** (*basestring*, *list*, *set*, *tuple*) – smartAccountId query parameter. Device Smart Account .
- **virtual_account_id** (*basestring*, *list*, *set*, *tuple*) – virtualAccountId query parameter. Device Virtual Account .
- **last_contact** (*bool*) – lastContact query parameter. Device Has Contacted lastContact > 0 .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_device_history(*serial_number*, *sort=None*, *sort_order=None*, *headers=None*, ***request_parameters*)

Returns history for a specific device. Serial number is a required parameter .

Parameters

- **serial_number** (*basestring*) – serialNumber query parameter. Device Serial Number .
- **sort** (*basestring*, *list*, *set*, *tuple*) – sort query parameter. Comma seperated list of fields to sort on .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

import_devices_in_bulk(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add devices to PnP in bulk .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

reset_device(*deviceResetList=None, projectId=None, workflowId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Recovers a device from a Workflow Execution Error state .

Parameters

- **deviceResetList** (*list*) – Device Onboarding (PnP)’s deviceResetList (list of objects).
- **projectId** (*string*) – Device Onboarding (PnP)’s projectId.
- **workflowId** (*string*) – Device Onboarding (PnP)’s workflowId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_sync_result_for_virtual_account(*domain, name, headers=None, **request_parameters*)

Returns the summary of devices synced from the given smart account & virtual account with PnP .

Parameters

- **domain** (*basestring*) – domain path parameter. Smart Account Domain .
- **name** (*basestring*) – name path parameter. Virtual Account Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
claim_a_device_to_a_site(configInfo=None, deviceId=None, gateway=None, hostname=None,
                        imageId=None, imageInfo=None, ipInterfaceName=None, rfProfile=None,
                        siteId=None, staticIP=None, subnetMask=None, type=None, vlanId=None,
                        headers=None, payload=None, active_validation=True,
                        **request_parameters)
```

Claim a device based on DNA-C Site based design process. Different parameters are required for different device platforms. .

Parameters

- **configInfo** (*object*) – Device Onboarding (PnP)’s configInfo.
- **deviceId** (*string*) – Device Onboarding (PnP)’s deviceId.
- **gateway** (*string*) – Device Onboarding (PnP)’s gateway.
- **hostname** (*string*) – Device Onboarding (PnP)’s hostname.
- **imageId** (*string*) – Device Onboarding (PnP)’s imageId.
- **imageInfo** (*object*) – Device Onboarding (PnP)’s imageInfo.
- **ipInterfaceName** (*string*) – Device Onboarding (PnP)’s ipInterfaceName.
- **rfProfile** (*string*) – Device Onboarding (PnP)’s rfProfile.
- **siteId** (*string*) – Device Onboarding (PnP)’s siteId.
- **staticIP** (*string*) – Device Onboarding (PnP)’s staticIP.
- **subnetMask** (*string*) – Device Onboarding (PnP)’s subnetMask.
- **type** (*string*) – Device Onboarding (PnP)’s type. Available values are ‘Default’, ‘AccessPoint’, ‘StackSwitch’, ‘Sensor’ and ‘MobilityExpress’.
- **vlanId** (*string*) – Device Onboarding (PnP)’s vlanId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
preview_config(deviceId=None, siteId=None, type=None, headers=None, payload=None,
                active_validation=True, **request_parameters)
```

Triggers a preview for site-based Day 0 Configuration .

Parameters

- **deviceId** (*string*) – Device Onboarding (PnP)’s deviceId.
- **siteId** (*string*) – Device Onboarding (PnP)’s siteId.
- **type** (*string*) – Device Onboarding (PnP)’s type. Available values are ‘Default’, ‘AccessPoint’, ‘StackSwitch’, ‘Sensor’ and ‘MobilityExpress’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

un_claim_device(*deviceIdList=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Un-Claims one of more devices with specified workflow .

Parameters

- **deviceIdList** (*list*) – Device Onboarding (PnP)’s deviceIdList (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
sync_virtual_account_devices(autoSyncPeriod=None, ccoUser=None, expiry=None, lastSync=None,
                             profile=None, smartAccountId=None, syncResult=None,
                             syncResultStr=None, syncStartTime=None, syncStatus=None,
                             tenantId=None, token=None, virtualAccountId=None, headers=None,
                             payload=None, active_validation=True, **request_parameters)
```

Synchronizes the device info from the given smart account & virtual account with the PnP database. The response payload returns a list of synced devices .

Parameters

- **autoSyncPeriod** (*integer*) – Device Onboarding (PnP)’s autoSyncPeriod.
- **ccoUser** (*string*) – Device Onboarding (PnP)’s ccoUser.
- **expiry** (*integer*) – Device Onboarding (PnP)’s expiry.
- **lastSync** (*integer*) – Device Onboarding (PnP)’s lastSync.
- **profile** (*object*) – Device Onboarding (PnP)’s profile.
- **smartAccountId** (*string*) – Device Onboarding (PnP)’s smartAccountId.
- **syncResult** (*object*) – Device Onboarding (PnP)’s syncResult.
- **syncResultStr** (*string*) – Device Onboarding (PnP)’s syncResultStr.
- **syncStartTime** (*integer*) – Device Onboarding (PnP)’s syncStartTime.
- **syncStatus** (*string*) – Device Onboarding (PnP)’s syncStatus. Available values are ‘NOT_SYNCED’, ‘SYNCING’, ‘SUCCESS’ and ‘FAILURE’.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **token** (*string*) – Device Onboarding (PnP)’s token.
- **virtualAccountId** (*string*) – Device Onboarding (PnP)’s virtualAccountId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_device(id, _id=None, deviceInfo=None, runSummaryList=None, systemResetWorkflow=None,
               systemWorkflow=None, tenantId=None, version=None, workflow=None,
               workflowParameters=None, headers=None, payload=None, active_validation=True,
               **request_parameters)
```

Updates device details specified by device id in PnP database .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)’s _id.
- **deviceInfo** (*object*) – Device Onboarding (PnP)’s deviceInfo.
- **runSummaryList** (*list*) – Device Onboarding (PnP)’s runSummaryList (list of objects).
- **systemResetWorkflow** (*object*) – Device Onboarding (PnP)’s systemResetWorkflow.
- **systemWorkflow** (*object*) – Device Onboarding (PnP)’s systemWorkflow.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **version** (*integer*) – Device Onboarding (PnP)’s version.
- **workflow** (*object*) – Device Onboarding (PnP)’s workflow.
- **workflowParameters** (*object*) – Device Onboarding (PnP)’s workflowParameters.
- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_device_by_id_from_pnp(*id*, *headers=None*, ***request_parameters*)

Deletes specified device from PnP database .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_by_id(*id*, *headers=None*, ***request_parameters*)

Returns device details specified by device id .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_pnp_global_settings(*_id=None*, *aaaCredentials=None*, *acceptEula=None*, *defaultProfile=None*, *savaMappingList=None*, *taskTimeOuts=None*, *tenantId=None*, *version=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Updates the user's list of global PnP settings .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)'s _id.
- **aaaCredentials** (*object*) – Device Onboarding (PnP)'s aaaCredentials.
- **acceptEula** (*boolean*) – Device Onboarding (PnP)'s acceptEula.
- **defaultProfile** (*object*) – Device Onboarding (PnP)'s defaultProfile.
- **savaMappingList** (*list*) – Device Onboarding (PnP)'s savaMappingList (list of objects).
- **taskTimeOuts** (*object*) – Device Onboarding (PnP)'s taskTimeOuts.
- **tenantId** (*string*) – Device Onboarding (PnP)'s tenantId.
- **version** (*integer*) – Device Onboarding (PnP)'s version.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_pnp_global_settings(*headers=None, **request_parameters*)

Returns global PnP settings of the user .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_smart_account_list(*headers=None, **request_parameters*)

Returns the list of Smart Account domains .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_virtual_account_list(*domain*, *headers*=None, ***request_parameters*)

Returns list of virtual accounts associated with the specified smart account .

Parameters

- **domain** (*basestring*) – domain path parameter. Smart Account Domain .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_virtual_account(*autoSyncPeriod*=None, *ccoUser*=None, *expiry*=None, *lastSync*=None, *profile*=None, *smartAccountId*=None, *syncResult*=None, *syncResultStr*=None, *syncStartTime*=None, *syncStatus*=None, *tenantId*=None, *token*=None, *virtualAccountId*=None, *headers*=None, *payload*=None, *active_validation*=True, ***request_parameters*)

Registers a Smart Account, Virtual Account and the relevant server profile info with the PnP System & database. The devices present in the registered virtual account are synced with the PnP database as well. The response payload returns the new profile .

Parameters

- **autoSyncPeriod** (*integer*) – Device Onboarding (PnP)'s autoSyncPeriod.
- **ccoUser** (*string*) – Device Onboarding (PnP)'s ccoUser.
- **expiry** (*integer*) – Device Onboarding (PnP)'s expiry.
- **lastSync** (*integer*) – Device Onboarding (PnP)'s lastSync.
- **profile** (*object*) – Device Onboarding (PnP)'s profile.
- **smartAccountId** (*string*) – Device Onboarding (PnP)'s smartAccountId.
- **syncResult** (*object*) – Device Onboarding (PnP)'s syncResult.
- **syncResultStr** (*string*) – Device Onboarding (PnP)'s syncResultStr.
- **syncStartTime** (*integer*) – Device Onboarding (PnP)'s syncStartTime.
- **syncStatus** (*string*) – Device Onboarding (PnP)'s syncStatus. Available values are 'NOT_SYNCED', 'SYNCING', 'SUCCESS' and 'FAILURE'.
- **tenantId** (*string*) – Device Onboarding (PnP)'s tenantId.
- **token** (*string*) – Device Onboarding (PnP)'s token.
- **virtualAccountId** (*string*) – Device Onboarding (PnP)'s virtualAccountId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_pnp_server_profile(autoSyncPeriod=None, ccoUser=None, expiry=None, lastSync=None,  
                           profile=None, smartAccountId=None, syncResult=None,  
                           syncResultStr=None, syncStartTime=None, syncStatus=None,  
                           tenantId=None, token=None, virtualAccountId=None, headers=None,  
                           payload=None, active_validation=True, **request_parameters)
```

Updates the PnP Server profile in a registered Virtual Account in the PnP database. The response payload returns the updated smart & virtual account info .

Parameters

- **autoSyncPeriod** (*integer*) – Device Onboarding (PnP)'s autoSyncPeriod.
- **ccoUser** (*string*) – Device Onboarding (PnP)'s ccoUser.
- **expiry** (*integer*) – Device Onboarding (PnP)'s expiry.
- **lastSync** (*integer*) – Device Onboarding (PnP)'s lastSync.
- **profile** (*object*) – Device Onboarding (PnP)'s profile.
- **smartAccountId** (*string*) – Device Onboarding (PnP)'s smartAccountId.
- **syncResult** (*object*) – Device Onboarding (PnP)'s syncResult.
- **syncResultStr** (*string*) – Device Onboarding (PnP)'s syncResultStr.
- **syncStartTime** (*integer*) – Device Onboarding (PnP)'s syncStartTime.
- **syncStatus** (*string*) – Device Onboarding (PnP)'s syncStatus. Available values are 'NOT_SYNCED', 'SYNCING', 'SUCCESS' and 'FAILURE'.
- **tenantId** (*string*) – Device Onboarding (PnP)'s tenantId.
- **token** (*string*) – Device Onboarding (PnP)'s token.
- **virtualAccountId** (*string*) – Device Onboarding (PnP)'s virtualAccountId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deregister_virtual_account(*domain, name, headers=None, **request_parameters*)

Deregisters the specified smart account & virtual account info and the associated device information from the PnP System & database. The devices associated with the deregistered virtual account are removed from the PnP database as well. The response payload contains the deregistered smart & virtual account information .

Parameters

- **domain** (*basestring*) – domain query parameter. Smart Account Domain .
- **name** (*basestring*) – name query parameter. Virtual Account Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_workflows(*limit=None, name=None, offset=None, sort=None, sort_order=None, type=None, headers=None, **request_parameters*)

Returns the list of workflows based on filter criteria. If a limit is not specified, it will default to return 50 workflows. Pagination and sorting are also supported by this endpoint .

Parameters

- **limit** (*int*) – limit query parameter. Limits number of results .
- **offset** (*int*) – offset query parameter. Index of first result .
- **sort** (*basestring, list, set, tuple*) – sort query parameter. Comma seperated list of fields to sort on .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **type** (*basestring, list, set, tuple*) – type query parameter. Workflow Type .

- **name** (*basestring*, *list*, *set*, *tuple*) – name query parameter. Workflow Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
add_a_workflow(_id=None, addToInventory=None, addedOn=None, configId=None, currTaskIdx=None, description=None, endTime=None, execTime=None, imageId=None, instanceType=None, lastupdateOn=None, name=None, startTime=None, state=None, tasks=None, tenantId=None, type=None, useState=None, version=None, headers=None, payload=None, active_validation=True, **request_parameters)
```

Adds a PnP Workflow along with the relevant tasks in the workflow into the PnP database .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)'s _id.
- **addToInventory** (*boolean*) – Device Onboarding (PnP)'s addToInventory.
- **addedOn** (*integer*) – Device Onboarding (PnP)'s addedOn.
- **configId** (*string*) – Device Onboarding (PnP)'s configId.
- **currTaskIdx** (*integer*) – Device Onboarding (PnP)'s currTaskIdx.
- **description** (*string*) – Device Onboarding (PnP)'s description.
- **endTime** (*integer*) – Device Onboarding (PnP)'s endTime.
- **execTime** (*integer*) – Device Onboarding (PnP)'s execTime.
- **imageId** (*string*) – Device Onboarding (PnP)'s imageId.
- **instanceType** (*string*) – Device Onboarding (PnP)'s instanceType. Available values are 'SystemWorkflow', 'UserWorkflow' and 'SystemResetWorkflow'.
- **lastupdateOn** (*integer*) – Device Onboarding (PnP)'s lastupdateOn.
- **name** (*string*) – Device Onboarding (PnP)'s name.
- **startTime** (*integer*) – Device Onboarding (PnP)'s startTime.
- **state** (*string*) – Device Onboarding (PnP)'s state.
- **tasks** (*list*) – Device Onboarding (PnP)'s tasks (list of objects).
- **tenantId** (*string*) – Device Onboarding (PnP)'s tenantId.
- **type** (*string*) – Device Onboarding (PnP)'s type.
- **useState** (*string*) – Device Onboarding (PnP)'s useState.

- **version** (*integer*) – Device Onboarding (PnP)’s version.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_workflow_count(*name=None, headers=None, **request_parameters*)

Returns the workflow count .

Parameters

- **name** (*basestring, list, set, tuple*) – name query parameter. Workflow Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_workflow_by_id(*id, headers=None, **request_parameters*)

Returns a workflow specified by id .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_workflow_by_id(*id*, *headers=None*, ***request_parameters*)

Deletes a workflow specified by id .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_workflow(*id*, *_id=None*, *addToInventory=None*, *addedOn=None*, *configId=None*, *currTaskIdx=None*, *description=None*, *endTime=None*, *execTime=None*, *imageId=None*, *instanceType=None*, *lastupdateOn=None*, *name=None*, *startTime=None*, *state=None*, *tasks=None*, *tenantId=None*, *type=None*, *useState=None*, *version=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Updates an existing workflow .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)'s _id.
- **addToInventory** (*boolean*) – Device Onboarding (PnP)'s addToInventory.
- **addedOn** (*integer*) – Device Onboarding (PnP)'s addedOn.
- **configId** (*string*) – Device Onboarding (PnP)'s configId.
- **currTaskIdx** (*integer*) – Device Onboarding (PnP)'s currTaskIdx.
- **description** (*string*) – Device Onboarding (PnP)'s description.
- **endTime** (*integer*) – Device Onboarding (PnP)'s endTime.
- **execTime** (*integer*) – Device Onboarding (PnP)'s execTime.

- **imageId** (*string*) – Device Onboarding (PnP)’s imageId.
- **instanceType** (*string*) – Device Onboarding (PnP)’s instanceType. Available values are ‘SystemWorkflow’, ‘UserWorkflow’ and ‘SystemResetWorkflow’.
- **lastupdateOn** (*integer*) – Device Onboarding (PnP)’s lastupdateOn.
- **name** (*string*) – Device Onboarding (PnP)’s name.
- **startTime** (*integer*) – Device Onboarding (PnP)’s startTime.
- **state** (*string*) – Device Onboarding (PnP)’s state.
- **tasks** (*list*) – Device Onboarding (PnP)’s tasks (list of objects).
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **type** (*string*) – Device Onboarding (PnP)’s type.
- **useState** (*string*) – Device Onboarding (PnP)’s useState.
- **version** (*integer*) – Device Onboarding (PnP)’s version.
- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_replacement**class DeviceReplacement**

Cisco DNA Center Device Replacement API (version: 2.2.3.3).

Wraps the DNA Center Device Replacement API and exposes the API as native Python methods that return native Python objects.

```
return_replacement_devices_with_details(family=None, faulty_device_name=None,
                                          faulty_device_platform=None,
                                          faulty_device_serial_number=None, limit=None,
                                          offset=None, replacement_device_platform=None,
                                          replacement_device_serial_number=None,
                                          replacement_status=None, sort_by=None,
                                          sort_order=None, headers=None, **request_parameters)
```

Get list of replacement devices with replacement details and it can filter replacement devices based on Faulty Device Name, Faulty Device Platform, Replacement Device Platform, Faulty Device Serial Number, Replacement Device Serial Number, Device Replacement status, Product Family. .

Parameters

- **faulty_device_name** (*basestring*) – faultyDeviceName query parameter. Faulty Device Name .
- **faulty_device_platform** (*basestring*) – faultyDevicePlatform query parameter. Faulty Device Platform .
- **replacement_device_platform** (*basestring*) – replacementDevicePlatform query parameter. Replacement Device Platform .
- **faulty_device_serial_number** (*basestring*) – faultyDeviceSerialNumber query parameter. Faulty Device Serial Number .
- **replacement_device_serial_number** (*basestring*) – replacementDeviceSerialNumber query parameter. Replacement Device Serial Number .
- **replacement_status** (*basestring, list, set, tuple*) – replacementStatus query parameter. Device Replacement status [READY-FOR-REPLACEMENT, REPLACEMENT-IN-PROGRESS, REPLACEMENT-SCHEDULED, REPLACED, ERROR, NETWORK_READINESS_REQUESTED, NETWORK_READINESS_FAILED] .
- **family** (*basestring, list, set, tuple*) – family query parameter. List of families [Routers, Switches and Hubs, AP] .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy this field. SortBy is mandatory when order is used. .
- **sort_order** (*basestring*) – sortOrder query parameter. Order on displayName [ASC, DESC] .
- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

unmark_device_for_replacement(*headers=None, payload=None, active_validation=True, **request_parameters*)

UnMarks device for replacement .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

mark_device_for_replacement(*headers=None, payload=None, active_validation=True, **request_parameters*)

Marks device for replacement .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

return_replacement_devices_count(*replacement_status=None, headers=None, **request_parameters*)

Get replacement devices count .

Parameters

- **replacement_status** (*basestring, list, set, tuple*) – replacementStatus query parameter. Device Replacement status list[READY-FOR-REPLACEMENT, REPLACEMENT-IN-PROGRESS, REPLACEMENT-SCHEDULED, REPLACED, ERROR] .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deploy_device_replacement_workflow(*faultyDeviceSerialNumber=None, replacementDeviceSerialNumber=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to trigger RMA workflow that will replace faulty device with replacement device with same configuration and images .

Parameters

- **faultyDeviceSerialNumber** (*string*) – Device Replacement's faultyDeviceSerialNumber.
- **replacementDeviceSerialNumber** (*string*) – Device Replacement's replacementDeviceSerialNumber.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

devices

class Devices

Cisco DNA Center Devices API (version: 2.2.3.3).

Wraps the DNA Center Devices API and exposes the API as native Python methods that return native Python objects.

get_device_detail(*identifier*, *search_by*, *timestamp=None*, *headers=None*, ***request_parameters*)

Returns detailed Network Device information retrieved by Mac Address, Device Name or UUID for any given point of time. .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the device data is required .
- **search_by** (*basestring*) – searchBy query parameter. MAC Address or Device Name value or UUID of the network device .
- **identifier** (*basestring*) – identifier query parameter. One of keywords : macAddress or uuid or nwDeviceName .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_enrichment_details(*headers=None*, ***request_parameters*)

Enriches a given network device context (device id or device Mac Address or device management IP address) with details about the device and neighbor topology .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

devices(*device_role=None, end_time=None, health=None, limit=None, offset=None, site_id=None, start_time=None, headers=None, **request_parameters*)

Intent API for accessing DNA Assurance Device object for generating reports, creating dashboards or creating additional value added services. .

Parameters

- **device_role** (*basestring*) – deviceRole query parameter. The device role (One of CORE, ACCESS, DISTRIBUTION, ROUTER, WLC, AP) .
- **site_id** (*basestring*) – siteId query parameter. Assurance site UUID value .
- **health** (*basestring*) – health query parameter. The device overall health (One of POOR, FAIR, GOOD) .
- **start_time** (*int*) – startTime query parameter. UTC epoch time in milliseconds .
- **end_time** (*int*) – endTime query parameter. UTC epoch time in milliseconds .
- **limit** (*int*) – limit query parameter. Max number of device entries in the response (default to 50. Max at 1000) .
- **offset** (*int*) – offset query parameter. The offset of the first device in the returned data .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_all_interfaces(*limit=None, offset=None, headers=None, **request_parameters*)

Returns all available interfaces. This endpoint can return a maximum of 500 interfaces .

Parameters

- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_interface_count(*headers=None, **request_parameters*)

Returns the count of interfaces for all devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_interface_by_ip(*ip_address, headers=None, **request_parameters*)

Returns list of interfaces for specified device management IP address .

Parameters

- **ip_address** (*basestring*) – ipAddress path parameter. IP address of the interface .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_isis_interfaces(*headers=None, **request_parameters*)

Returns the interfaces that has ISIS enabled .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_interface_info_by_id(*device_id*, *headers=None*, ***request_parameters*)

Returns list of interfaces by specified device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_interface_count_by_id(*device_id*, *headers=None*, ***request_parameters*)

Returns the interface count for the given device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_interface_details(*device_id*, *name*, *headers=None*, ***request_parameters*)

Returns interface by specified device Id and interface name .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **name** (*basestring*) – name query parameter. Interface name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_interfaces_by_specified_range(*device_id*, *records_to_return*, *start_index*, *headers=None*, ***request_parameters*)

Returns the list of interfaces for the device for the specified range .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_ospf_interfaces(*headers=None, **request_parameters*)

Returns the interfaces that has OSPF enabled .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_interface_by_id(*id, headers=None, **request_parameters*)

Returns the interface for the given interface ID .

Parameters

- **id** (*basestring*) – id path parameter. Interface ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_list(*associated_wlc_ip=None, collection_interval=None, collection_status=None, device_support_level=None, error_code=None, error_description=None, family=None, hostname=None, id=None, license_name=None, license_status=None, license_type=None, location=None, location_name=None, mac_address=None, management_ip_address=None, module_equipmenttype=None, module_name=None, module_operationstatecode=None, module_partnumber=None, module_servicestate=None, module_vendorequipmenttype=None, not_synced_for_minutes=None, platform_id=None, reachability_status=None, role=None, serial_number=None, series=None, software_type=None, software_version=None, type=None, up_time=None, headers=None, **request_parameters*)

Returns list of network devices based on filter criteria such as management IP address, mac address, hostname, etc. You can use the `*` in any value to conduct a wildcard search. For example, to find all hostnames beginning with myhost in the IP address range 192.25.18.n, issue the following request: GET /dna/intent/api/v1/network-device?hostname=myhost.*&managementIpAddress=192.25.18.* If id parameter is provided with comma separated ids, it will return the list of network-devices for the given ids and ignores the other request parameters. .

Parameters

- **hostname** (*basestring, list, set, tuple*) – hostname query parameter.
- **management_ip_address** (*basestring, list, set, tuple*) – managementIpAddress query parameter.
- **mac_address** (*basestring, list, set, tuple*) – macAddress query parameter.
- **location_name** (*basestring, list, set, tuple*) – locationName query parameter.
- **serial_number** (*basestring, list, set, tuple*) – serialNumber query parameter.
- **location** (*basestring, list, set, tuple*) – location query parameter.
- **family** (*basestring, list, set, tuple*) – family query parameter.
- **type** (*basestring, list, set, tuple*) – type query parameter.
- **series** (*basestring, list, set, tuple*) – series query parameter.
- **collection_status** (*basestring, list, set, tuple*) – collectionStatus query parameter.
- **collection_interval** (*basestring, list, set, tuple*) – collectionInterval query parameter.
- **not_synced_for_minutes** (*basestring, list, set, tuple*) – notSyncedForMinutes query parameter.
- **error_code** (*basestring, list, set, tuple*) – errorCode query parameter.
- **error_description** (*basestring, list, set, tuple*) – errorDescription query parameter.
- **software_version** (*basestring, list, set, tuple*) – softwareVersion query parameter.
- **software_type** (*basestring, list, set, tuple*) – softwareType query parameter.
- **platform_id** (*basestring, list, set, tuple*) – platformId query parameter.
- **role** (*basestring, list, set, tuple*) – role query parameter.
- **reachability_status** (*basestring, list, set, tuple*) – reachabilityStatus query parameter.
- **up_time** (*basestring, list, set, tuple*) – upTime query parameter.
- **associated_wlc_ip** (*basestring, list, set, tuple*) – associatedWlcIp query parameter.
- **license_name** (*basestring, list, set, tuple*) – license.name query parameter.
- **license_type** (*basestring, list, set, tuple*) – license.type query parameter.
- **license_status** (*basestring, list, set, tuple*) – license.status query parameter.

- **module_name** (*basestring*, *list*, *set*, *tuple*) – module+name query parameter.
- **module_equipmenttype** (*basestring*, *list*, *set*, *tuple*) – module+equipmenttype query parameter.
- **module_servicestate** (*basestring*, *list*, *set*, *tuple*) – module+servicestate query parameter.
- **module_vendorequipmenttype** (*basestring*, *list*, *set*, *tuple*) – module+vendorequipmenttype query parameter.
- **module_partnumber** (*basestring*, *list*, *set*, *tuple*) – module+partnumber query parameter.
- **module_operationstatecode** (*basestring*, *list*, *set*, *tuple*) – module+operationstatecode query parameter.
- **id** (*basestring*) – id query parameter. Accepts comma separated ids and return list of network-devices for the given ids. If invalid or not-found ids are provided, null entry will be returned in the list. .
- **device_support_level** (*basestring*) – deviceSupportLevel query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_device(*cliTransport=None*, *computeDevice=None*, *enablePassword=None*, *extendedDiscoveryInfo=None*, *httpPassword=None*, *httpPort=None*, *httpSecure=None*, *httpUserName=None*, *ipAddress=None*, *merakiOrgId=None*, *netconfPort=None*, *password=None*, *serialNumber=None*, *snmpAuthPassphrase=None*, *snmpAuthProtocol=None*, *snmpMode=None*, *snmpPrivPassphrase=None*, *snmpPrivProtocol=None*, *snmpROCommunity=None*, *snmpRWCommunity=None*, *snmpRetry=None*, *snmpTimeout=None*, *snmpUserName=None*, *snmpVersion=None*, *type=None*, *updateMgmtIPaddressList=None*, *userName=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Adds the device with given credential .

Parameters

- **cliTransport** (*string*) – Devices's cliTransport.
- **computeDevice** (*boolean*) – Devices's computeDevice.
- **enablePassword** (*string*) – Devices's enablePassword.
- **extendedDiscoveryInfo** (*string*) – Devices's extendedDiscoveryInfo.
- **httpPassword** (*string*) – Devices's httpPassword.

- **httpPort** (*string*) – Devices’s httpPort.
- **httpSecure** (*boolean*) – Devices’s httpSecure.
- **httpUserName** (*string*) – Devices’s httpUserName.
- **ipAddress** (*list*) – Devices’s ipAddress (list of strings).
- **merakiOrgId** (*list*) – Devices’s merakiOrgId (list of strings).
- **netconfPort** (*string*) – Devices’s netconfPort.
- **password** (*string*) – Devices’s password.
- **serialNumber** (*string*) – Devices’s serialNumber.
- **snmpAuthPassphrase** (*string*) – Devices’s snmpAuthPassphrase.
- **snmpAuthProtocol** (*string*) – Devices’s snmpAuthProtocol.
- **snmpMode** (*string*) – Devices’s snmpMode.
- **snmpPrivPassphrase** (*string*) – Devices’s snmpPrivPassphrase.
- **snmpPrivProtocol** (*string*) – Devices’s snmpPrivProtocol.
- **snmpROCommunity** (*string*) – Devices’s snmpROCommunity.
- **snmpRWCommunity** (*string*) – Devices’s snmpRWCommunity.
- **snmpRetry** (*integer*) – Devices’s snmpRetry.
- **snmpTimeout** (*integer*) – Devices’s snmpTimeout.
- **snmpUserName** (*string*) – Devices’s snmpUserName.
- **snmpVersion** (*string*) – Devices’s snmpVersion.
- **type** (*string*) – Devices’s type. Available values are ‘COMPUTE_DEVICE’, ‘MERAKI_DASHBOARD’, ‘NETWORK_DEVICE’ and ‘NODATACHANGE’.
- **updateMgmtIPaddressList** (*list*) – Devices’s updateMgmtIPaddressList (list of objects).
- **userName** (*string*) – Devices’s userName.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
sync_devices(cliTransport=None, computeDevice=None, enablePassword=None,
              extendedDiscoveryInfo=None, httpPassword=None, httpPort=None, httpSecure=None,
              httpUserName=None, id=None, ipAddress=None, merakiOrgId=None, netconfPort=None,
              password=None, serialNumber=None, snmpAuthPassphrase=None,
              snmpAuthProtocol=None, snmpMode=None, snmpPrivPassphrase=None,
              snmpPrivProtocol=None, snmpROCommunity=None, snmpRWCommunity=None,
              snmpRetry=None, snmpTimeout=None, snmpUserName=None, snmpVersion=None,
              type=None, updateMgmtIPaddressList=None, userName=None, headers=None,
              payload=None, active_validation=True, **request_parameters)
```

Sync the devices provided as input .

Parameters

- **cliTransport** (*string*) – Devices’s cliTransport.
- **computeDevice** (*boolean*) – Devices’s computeDevice.
- **enablePassword** (*string*) – Devices’s enablePassword.
- **extendedDiscoveryInfo** (*string*) – Devices’s extendedDiscoveryInfo.
- **httpPassword** (*string*) – Devices’s httpPassword.
- **httpPort** (*string*) – Devices’s httpPort.
- **httpSecure** (*boolean*) – Devices’s httpSecure.
- **httpUserName** (*string*) – Devices’s httpUserName.
- **id** (*string*) – Devices’s id.
- **ipAddress** (*list*) – Devices’s ipAddress (list of strings).
- **merakiOrgId** (*list*) – Devices’s merakiOrgId (list of strings).
- **netconfPort** (*string*) – Devices’s netconfPort.
- **password** (*string*) – Devices’s password.
- **serialNumber** (*string*) – Devices’s serialNumber.
- **snmpAuthPassphrase** (*string*) – Devices’s snmpAuthPassphrase.
- **snmpAuthProtocol** (*string*) – Devices’s snmpAuthProtocol.
- **snmpMode** (*string*) – Devices’s snmpMode.
- **snmpPrivPassphrase** (*string*) – Devices’s snmpPrivPassphrase.
- **snmpPrivProtocol** (*string*) – Devices’s snmpPrivProtocol.
- **snmpROCommunity** (*string*) – Devices’s snmpROCommunity.
- **snmpRWCommunity** (*string*) – Devices’s snmpRWCommunity.
- **snmpRetry** (*integer*) – Devices’s snmpRetry.
- **snmpTimeout** (*integer*) – Devices’s snmpTimeout.
- **snmpUserName** (*string*) – Devices’s snmpUserName.
- **snmpVersion** (*string*) – Devices’s snmpVersion.
- **type** (*string*) – Devices’s type. Available values are ‘COMPUTE_DEVICE’, ‘MER-AKI_DASHBOARD’, ‘NETWORK_DEVICE’ and ‘NODATACHANGE’.
- **updateMgmtIPaddressList** (*list*) – Devices’s updateMgmtIPaddressList (list of objects).

- **userName** (*string*) – Devices’s userName.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_values_that_match_fully_or_partially_an_attribute(*associated_wlc_ip=None, collection_interval=None, collection_status=None, error_code=None, family=None, hostname=None, limit=None, mac_address=None, management_ip_address=None, offset=None, platform_id=None, reachability_failure_reason=None, reachability_status=None, role=None, role_source=None, serial_number=None, series=None, software_type=None, software_version=None, type=None, up_time=None, vrf_name=None, headers=None, **request_parameters*)

Returns the list of values of the first given required parameter. You can use the `.*` in any value to conduct a wildcard search. For example, to get all the devices with the management IP address starting with 10.10. , issue the following request: `GET /dna/inten/api/v1/network-device/autocomplete?managementIpAddress=10.10.*` It will return the device management IP addresses that match fully or partially the provided attribute. `{[10.10.1.1, 10.10.20.2, ...]}` .

Parameters

- **vrf_name** (*basestring*) – vrfName query parameter.
- **management_ip_address** (*basestring*) – managementIpAddress query parameter.
- **hostname** (*basestring*) – hostname query parameter.

- **mac_address** (*basestring*) – macAddress query parameter.
- **family** (*basestring*) – family query parameter.
- **collection_status** (*basestring*) – collectionStatus query parameter.
- **collection_interval** (*basestring*) – collectionInterval query parameter.
- **software_version** (*basestring*) – softwareVersion query parameter.
- **software_type** (*basestring*) – softwareType query parameter.
- **reachability_status** (*basestring*) – reachabilityStatus query parameter.
- **reachability_failure_reason** (*basestring*) – reachabilityFailureReason query parameter.
- **error_code** (*basestring*) – errorCode query parameter.
- **platform_id** (*basestring*) – platformId query parameter.
- **series** (*basestring*) – series query parameter.
- **type** (*basestring*) – type query parameter.
- **serial_number** (*basestring*) – serialNumber query parameter.
- **up_time** (*basestring*) – upTime query parameter.
- **role** (*basestring*) – role query parameter.
- **role_source** (*basestring*) – roleSource query parameter.
- **associated_wlc_ip** (*basestring*) – associatedWlcIp query parameter.
- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_device_role(*id=None, role=None, roleSource=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates the role of the device as access, core, distribution, border router .

Parameters

- **id** (*string*) – Devices's id.
- **role** (*string*) – Devices's role.

- **roleSource** (*string*) – Devices’s roleSource.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_polling_interval_for_all_devices(*headers=None, **request_parameters*)

Returns polling interval of all devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_config_for_all_devices(*headers=None, **request_parameters*)

Returns the config for all devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_config_count(*headers=None, **request_parameters*)

Returns the count of device configs .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_count(*headers=None, **request_parameters*)

Returns the count of network devices based on the filter criteria by management IP address, mac address, hostname and location name .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

export_device_list(*deviceUuids=None, id=None, operationEnum=None, parameters=None, password=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Exports the selected network device to a file .

Parameters

- **deviceUuids** (*list*) – Devices’s deviceUuids (list of strings).
- **id** (*string*) – Devices’s id.
- **operationEnum** (*string*) – Devices’s operationEnum. Available values are ‘CREDENTIALDETAILS’ and ‘DEVICEDETAILS’.
- **parameters** (*list*) – Devices’s parameters (list of strings).
- **password** (*string*) – Devices’s password.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_functional_capability_for_devices(*device_id*, *function_name=None*, *headers=None*, ***request_parameters*)

Returns the functional-capability for given devices .

Parameters

- **device_id** (*basestring*) – deviceId query parameter. Accepts comma separated deviceId’s and return list of functional-capabilities for the given id’s. If invalid or not-found id’s are provided, null entry will be returned in the list. .
- **function_name** (*basestring*, *list*, *set*, *tuple*) – functionName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_functional_capability_by_id(*id*, *headers=None*, ***request_parameters*)

Returns functional capability with given Id .

Parameters

- **id** (*basestring*) – id path parameter. Functional Capability UUID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

inventory_insight_device_link_mismatch(*category*, *site_id*, *limit=None*, *offset=None*, *order=None*, *sort_by=None*, *headers=None*, ***request_parameters*)

Find all devices with link mismatch (speed / vlan) .

Parameters

- **site_id** (*basestring*) – siteId path parameter.
- **offset** (*basestring*) – offset query parameter. Row Number. Default value is 1 .
- **limit** (*basestring*) – limit query parameter. Default value is 500 .
- **category** (*basestring*) – category query parameter. Links mismatch category. Value can be speed-duplex or vlan. .
- **sort_by** (*basestring*) – sortBy query parameter. Sort By .
- **order** (*basestring*) – order query parameter. Order. Value can be asc or desc. Default value is asc .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_devices_with_snmpv3_des(*site_id*, *limit=None*, *offset=None*, *order=None*, *sort_by=None*, *headers=None*, ***request_parameters*)

Returns devices added to DNAC with snmp v3 DES, where siteId is mandatory & accepts offset, limit, sortBy, order which are optional. .

Parameters

- **site_id** (*basestring*) – siteId path parameter.
- **offset** (*basestring*) – offset query parameter. Row Number. Default value is 1 .
- **limit** (*basestring*) – limit query parameter. Default value is 500 .
- **sort_by** (*basestring*) – sortBy query parameter. Sort By .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_network_device_by_ip(*ip_address*, *headers=None*, ***request_parameters*)

Returns the network device by specified IP address .

Parameters

- **ip_address** (*basestring*) – ipAddress path parameter. Device IP address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_modules(device_id, limit=None, name_list=None, offset=None, operational_state_code_list=None,
             part_number_list=None, vendor_equipment_type_list=None, headers=None,
             **request_parameters)
```

Returns modules by specified device id .

Parameters

- **device_id** (*basestring*) – deviceId query parameter.
- **limit** (*basestring*) – limit query parameter.
- **offset** (*basestring*) – offset query parameter.
- **name_list** (*basestring*, *list*, *set*, *tuple*) – nameList query parameter.
- **vendor_equipment_type_list** (*basestring*, *list*, *set*, *tuple*) – vendorEquipmentTypeList query parameter.
- **part_number_list** (*basestring*, *list*, *set*, *tuple*) – partNumberList query parameter.
- **operational_state_code_list** (*basestring*, *list*, *set*, *tuple*) – operationalStateCodeList query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_module_count(device_id, name_list=None, operational_state_code_list=None,
                  part_number_list=None, vendor_equipment_type_list=None, headers=None,
                  **request_parameters)
```

Returns Module Count .

Parameters

- **device_id** (*basestring*) – deviceId query parameter.
- **name_list** (*basestring*, *list*, *set*, *tuple*) – nameList query parameter.
- **vendor_equipment_type_list** (*basestring*, *list*, *set*, *tuple*) – vendorEquipmentTypeList query parameter.
- **part_number_list** (*basestring*, *list*, *set*, *tuple*) – partNumberList query parameter.
- **operational_state_code_list** (*basestring*, *list*, *set*, *tuple*) – operationalStateCodeList query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_module_info_by_id(*id*, *headers=None*, ****request_parameters**)

Returns Module info by id .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_by_serial_number(*serial_number*, *headers=None*, ****request_parameters**)

Returns the network device with given serial number .

Parameters

- **serial_number** (*basestring*) – serialNumber path parameter. Device serial number .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sync_devices_using_forcesync(*force_sync=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Synchronizes the devices. If forceSync param is false (default) then the sync would run in normal priority thread. If forceSync param is true then the sync would run in high priority thread if available, else the sync will fail. Result can be seen in the child task of each device .

Parameters

- **force_sync** (*bool*) – forceSync query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

register_device_for_wsa(*macaddress=None, serial_number=None, headers=None, **request_parameters*)

Registers a device for WSA notification .

Parameters

- **serial_number** (*basestring*) – serialNumber query parameter. Serial number of the device .
- **macaddress** (*basestring*) – macaddress query parameter. Mac address of the device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_chassis_details_for_device(*device_id*, *headers=None*, ***request_parameters*)

Returns chassis details for given device ID .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_stack_details_for_device(*device_id*, *headers=None*, ***request_parameters*)

Retrieves complete stack details for given device ID .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

return_power_supply_fan_details_for_the_given_device(*device_uuid*, *type*, *headers=None*, ***request_parameters*)

Return PowerSupply/ Fan details for the Given device .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter.
- **type** (*basestring*) – type query parameter. Type value should be PowerSupply or Fan .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

poe_interface_details(*device_uuid*, *interface_name_list=None*, *headers=None*, ***request_parameters*)

Returns POE interface details for the device, where deviceuuid is mandatory & accepts comma separated interface names which is optional and returns information for that particular interfaces where(operStatus = operationalStatus) .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. uuid of the device .
- **interface_name_list** (*basestring*) – interfaceNameList query parameter. comma separated interface names .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_linecard_details(*device_uuid*, *headers=None*, ***request_parameters*)

Get line card detail for a given deviceuuid. Response will contain serial no, part no, switch no and slot no.

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. instanceuuid of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

poe_details_(*device_uuid*, *headers=None*, ***request_parameters*)

Returns POE details for device. .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. uuid of the device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

poe_details(*device_uuid*, *headers=None*, ***request_parameters*)

Returns POE details for device. .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. uuid of the device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_supervisor_card_detail(*device_uuid*, *headers=None*, ***request_parameters*)

Get supervisor card detail for a given deviceuuid. Response will contain serial no, part no, switch no and slot no. .

Parameters

- **device_uuid** (*basestring*) – deviceId path parameter. instanceuuid of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_by_id(*id*, *headers=None*, ***request_parameters*)

Returns the network device details for the given device ID .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_device_by_id(*id*, *clean_config=None*, *headers=None*, ***request_parameters*)

Deletes the network device for the given Id .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **clean_config** (*bool*) – cleanConfig query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_summary(*id*, *headers=None*, ****request_parameters**)

Returns brief summary of device info such as hostname, management IP address for the given device Id .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_polling_interval_by_id(*id*, *headers=None*, ****request_parameters**)

Returns polling interval by device id .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_organization_list_for_meraki(*id*, *headers=None*, ***request_parameters*)

Returns list of organizations for meraki dashboard .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_interface_vlans(*id*, *interface_type=None*, *headers=None*, ***request_parameters*)

Returns Device Interface VLANs .

Parameters

- **id** (*basestring*) – id path parameter.
- **interface_type** (*basestring*) – interfaceType query parameter. Vlan associated with sub-interface .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_wireless_lan_controller_details_by_id(*id*, *headers=None*, ***request_parameters*)

Returns the wireless lan controller info with given device ID .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_config_by_id(*network_device_id*, *headers=None*, ***request_parameters*)

Returns the device config by specified device ID .

Parameters

- **network_device_id** (*basestring*) – networkDeviceId path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_network_device_by_pagination_range(*records_to_return*, *start_index*, *headers=None*, ***request_parameters*)

Returns the list of network devices for the given pagination range .

Parameters

- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

threat_details(*endTime=None, isNewThreat=None, limit=None, offset=None, siteId=None, startTime=None, threatLevel=None, threatType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

The details for the Rogue and aWIPS threats .

Parameters

- **endTime** (*integer*) – Devices's End Time.
- **isNewThreat** (*boolean*) – Devices's Is New Threat.
- **limit** (*integer*) – Devices's Limit.
- **offset** (*integer*) – Devices's Offset.
- **siteId** (*list*) – Devices's Site Id (list of strings).
- **startTime** (*integer*) – Devices's Start Time.
- **threatLevel** (*list*) – Devices's Threat Level (list of strings).
- **threatType** (*list*) – Devices's Threat Type (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

threat_detail_count(*endTime=None, isNewThreat=None, limit=None, offset=None, siteId=None, startTime=None, threatLevel=None, threatType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

The details count for the Rogue and aWIPS threats .

Parameters

- **endTime** (*integer*) – Devices’s End Time.
- **isNewThreat** (*boolean*) – Devices’s Is New Threat.
- **limit** (*integer*) – Devices’s Limit.
- **offset** (*integer*) – Devices’s Offset.
- **siteId** (*list*) – Devices’s Site Id (list of strings).
- **startTime** (*integer*) – Devices’s Start Time.
- **threatLevel** (*list*) – Devices’s Threat Level (list of strings).
- **threatType** (*list*) – Devices’s Threat Type (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

threat_summary(*endTime=None, siteId=None, startTime=None, threatLevel=None, threatType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

The Threat Summary for the Rogues and aWIPS .

Parameters

- **endTime** (*integer*) – Devices’s End Time.
- **siteId** (*list*) – Devices’s Site Id (list of strings).
- **startTime** (*integer*) – Devices’s Start Time.
- **threatLevel** (*list*) – Devices’s Threat Level (list of strings).
- **threatType** (*list*) – Devices’s Threat Type (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

disaster_recovery**class DisasterRecovery**

Cisco DNA Center Disaster Recovery API (version: 2.2.3.3).

Wraps the DNA Center Disaster Recovery API and exposes the API as native Python methods that return native Python objects.

disaster_recovery_operational_status(*headers=None, **request_parameters*)

Returns the status of Disaster Recovery operation performed on the system. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

disaster_recovery_status(*headers=None, **request_parameters*)

Detailed and Summarized status of DR components (Active, Standby and Witness system's health). .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

discovery**class Discovery**

Cisco DNA Center Discovery API (version: 2.2.3.3).

Wraps the DNA Center Discovery API and exposes the API as native Python methods that return native Python objects.

delete_all_discovery(*headers=None, **request_parameters*)

Stops all the discoveries and removes them .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

updates_discovery_by_id(*attributeInfo=None, cdpLevel=None, deviceIds=None, discoveryCondition=None, discoveryStatus=None, discoveryType=None, enablePasswordList=None, globalCredentialIdList=None, httpReadCredential=None, httpWriteCredential=None, id=None, ipAddressList=None, ipFilterList=None, isAutoCdp=None, lldpLevel=None, name=None, netconfPort=None, numDevices=None, parentDiscoveryId=None, passwordList=None, preferredMgmtIPMethod=None, protocolOrder=None, retryCount=None, snmpAuthPassphrase=None, snmpAuthProtocol=None, snmpMode=None, snmpPrivPassphrase=None, snmpPrivProtocol=None, snmpRoCommunity=None, snmpRoCommunityDesc=None, snmpRwCommunity=None, snmpRwCommunityDesc=None, snmpUserName=None, timeOut=None, updateMgmtIp=None, userNameList=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Stops or starts an existing discovery .

Parameters

- **attributeInfo** (*object*) – Discovery’s attributeInfo.
- **cdpLevel** (*integer*) – Discovery’s cdpLevel.
- **deviceIds** (*string*) – Discovery’s deviceIds.
- **discoveryCondition** (*string*) – Discovery’s discoveryCondition.
- **discoveryStatus** (*string*) – Discovery’s discoveryStatus.
- **discoveryType** (*string*) – Discovery’s discoveryType.
- **enablePasswordList** (*string*) – Discovery’s enablePasswordList.
- **globalCredentialIdList** (*list*) – Discovery’s globalCredentialIdList (list of strings).
- **httpReadCredential** (*object*) – Discovery’s httpReadCredential.
- **httpWriteCredential** (*object*) – Discovery’s httpWriteCredential.
- **id** (*string*) – Discovery’s id.
- **ipAddressList** (*string*) – Discovery’s ipAddressList.
- **ipFilterList** (*string*) – Discovery’s ipFilterList.
- **isAutoCdp** (*boolean*) – Discovery’s isAutoCdp.
- **lldpLevel** (*integer*) – Discovery’s lldpLevel.
- **name** (*string*) – Discovery’s name.
- **netconfPort** (*string*) – Discovery’s netconfPort.
- **numDevices** (*integer*) – Discovery’s numDevices.
- **parentDiscoveryId** (*string*) – Discovery’s parentDiscoveryId.
- **passwordList** (*string*) – Discovery’s passwordList.
- **preferredMgmtIPMethod** (*string*) – Discovery’s preferredMgmtIPMethod.
- **protocolOrder** (*string*) – Discovery’s protocolOrder.
- **retryCount** (*integer*) – Discovery’s retryCount.
- **snmpAuthPassphrase** (*string*) – Discovery’s snmpAuthPassphrase.
- **snmpAuthProtocol** (*string*) – Discovery’s snmpAuthProtocol.
- **snmpMode** (*string*) – Discovery’s snmpMode.
- **snmpPrivPassphrase** (*string*) – Discovery’s snmpPrivPassphrase.
- **snmpPrivProtocol** (*string*) – Discovery’s snmpPrivProtocol.
- **snmpRoCommunity** (*string*) – Discovery’s snmpRoCommunity.
- **snmpRoCommunityDesc** (*string*) – Discovery’s snmpRoCommunityDesc.
- **snmpRwCommunity** (*string*) – Discovery’s snmpRwCommunity.
- **snmpRwCommunityDesc** (*string*) – Discovery’s snmpRwCommunityDesc.
- **snmpUserName** (*string*) – Discovery’s snmpUserName.
- **timeOut** (*integer*) – Discovery’s timeOut.
- **updateMgmtIp** (*boolean*) – Discovery’s updateMgmtIp.
- **userNameList** (*string*) – Discovery’s userNameList.

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

start_discovery(*cdpLevel=None, discoveryType=None, enablePasswordList=None, globalCredentialIdList=None, httpReadCredential=None, httpWriteCredential=None, ipAddressList=None, ipFilterList=None, lldpLevel=None, name=None, netconfPort=None, passwordList=None, preferredMgmtIPMethod=None, protocolOrder=None, retry=None, snmpAuthPassphrase=None, snmpAuthProtocol=None, snmpMode=None, snmpPrivPassphrase=None, snmpPrivProtocol=None, snmpROCommunity=None, snmpROCommunityDesc=None, snmpRWCommunity=None, snmpRWCommunityDesc=None, snmpUserName=None, snmpVersion=None, timeout=None, userNameList=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Initiates discovery with the given parameters .

Parameters

- **cdpLevel** (*integer*) – Discovery's CDP level to which neighbor devices to be discovered .
- **discoveryType** (*string*) – Discovery's Type of Discovery. 'SINGLE', 'RANGE', 'MULTI RANGE', 'CDP', 'LLDP' .
- **enablePasswordList** (*list*) – Discovery's Enable Password of the devices to be discovered (list of strings).
- **globalCredentialIdList** (*list*) – Discovery's Global Credential Ids to be used for discovery (list of strings).
- **httpReadCredential** (*object*) – Discovery's httpReadCredential.
- **httpWriteCredential** (*object*) – Discovery's httpWriteCredential.
- **ipAddressList** (*string*) – Discovery's IP Address of devices to be discovered. Ex: '172.30.0.1' for SINGLE, CDP and LLDP; '72.30.0.1-172.30.0.4' for RANGE; '72.30.0.1-172.30.0.4,172.31.0.1-172.31.0.4' for MULTI RANGE .
- **ipFilterList** (*list*) – Discovery's IP Addresses of the devices to be filtered out during discovery (list of strings).
- **lldpLevel** (*integer*) – Discovery's LLDP level to which neighbor devices to be discovered .

- **name** (*string*) – Discovery’s Name of the discovery .
- **netconfPort** (*string*) – Discovery’s Netconf Port. It will need valid SSH credentials to work .
- **passwordList** (*list*) – Discovery’s Password of the devices to be discovered (list of strings).
- **preferredMgmtIPMethod** (*string*) – Discovery’s Preferred Management IP Method. ‘None’ or ‘UseLoopBack’. Default is ‘None’ .
- **protocolOrder** (*string*) – Discovery’s Order of protocol (ssh/telnet) in which device connection will be tried. Ex: ‘telnet’: only telnet; ‘ssh,telnet’: ssh with higher order than telnet .
- **retry** (*integer*) – Discovery’s Number of times to try establishing connection to device .
- **snmpAuthPassphrase** (*string*) – Discovery’s Auth Pass phrase for SNMP .
- **snmpAuthProtocol** (*string*) – Discovery’s SNMP auth protocol. SHA’ or ‘MD5’ .
- **snmpMode** (*string*) – Discovery’s Mode of SNMP. ‘AUTHPRIV’ or ‘AUTHNOPRIV’ or ‘NOAUTHNOPRIV’ .
- **snmpPrivPassphrase** (*string*) – Discovery’s Pass phrase for SNMP privacy .
- **snmpPrivProtocol** (*string*) – Discovery’s SNMP privacy protocol. ‘DES’ or ‘AES128’ .
- **snmpROCommunity** (*string*) – Discovery’s Snmp RO community of the devices to be discovered .
- **snmpROCommunityDesc** (*string*) – Discovery’s Description for Snmp RO community .
- **snmpRWCommunity** (*string*) – Discovery’s Snmp RW community of the devices to be discovered .
- **snmpRWCommunityDesc** (*string*) – Discovery’s Description for Snmp RW community .
- **snmpUserName** (*string*) – Discovery’s SNMP username of the device .
- **snmpVersion** (*string*) – Discovery’s Version of SNMP. v2 or v3 .
- **timeout** (*integer*) – Discovery’s Time to wait for device response in seconds .
- **userNameList** (*list*) – Discovery’s Username of the devices to be discovered (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_count_of_all_discovery_jobs(*headers=None, **request_parameters*)

Returns the count of all available discovery jobs .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_discovery_jobs_by_ip(*ip_address, limit=None, name=None, offset=None, headers=None, **request_parameters*)

Returns the list of discovery jobs for the given IP .

Parameters

- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **ip_address** (*basestring*) – ipAddress query parameter.
- **name** (*basestring*) – name query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_discovery_by_id(*id*, *headers=None*, ***request_parameters*)

Stops the discovery for the given Discovery ID and removes it. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_discovery_by_id(*id*, *headers=None*, ***request_parameters*)

Returns discovery by Discovery ID. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_list_of_discoveries_by_discovery_id(*id*, *ip_address=None*, *limit=None*, *offset=None*, *headers=None*, ***request_parameters*)

Returns the list of discovery jobs for the given Discovery ID. The results can be optionally filtered based on IP. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **offset** (*int*) – offset query parameter.

- **limit** (*int*) – limit query parameter.
- **ip_address** (*basestring*) – ipAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_discovered_network_devices_by_discovery_id(*id*, *task_id=None*, *headers=None*, ***request_parameters*)

Returns the network devices discovered for the given Discovery ID. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **task_id** (*basestring*) – taskId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_devices_discovered_by_id(*id*, *task_id=None*, *headers=None*, ***request_parameters*)

Returns the count of network devices discovered in the given discovery. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **task_id** (*basestring*) – taskId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_discovered_devices_by_range(*id*, *records_to_return*, *start_index*, *task_id=None*, *headers=None*, ***request_parameters*)

Returns the network devices discovered for the given discovery and for the given range. The maximum number of records that can be retrieved is 500. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **task_id** (*basestring*) – taskId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_network_devices_from_discovery(*id*, *cli_status=None*, *http_status=None*, *ip_address=None*, *netconf_status=None*, *ping_status=None*, *snmp_status=None*, *sort_by=None*, *sort_order=None*, *task_id=None*, *headers=None*, ***request_parameters*)

Returns the network devices from a discovery job based on given filters. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .

- **task_id** (*basestring*) – taskId query parameter.
- **sort_by** (*basestring*) – sortBy query parameter.
- **sort_order** (*basestring*) – sortOrder query parameter.
- **ip_address** (*basestring*, *list*, *set*, *tuple*) – ipAddress query parameter.
- **ping_status** (*basestring*, *list*, *set*, *tuple*) – pingStatus query parameter.
- **snmp_status** (*basestring*, *list*, *set*, *tuple*) – snmpStatus query parameter.
- **cli_status** (*basestring*, *list*, *set*, *tuple*) – cliStatus query parameter.
- **netconf_status** (*basestring*, *list*, *set*, *tuple*) – netconfStatus query parameter.
- **http_status** (*basestring*, *list*, *set*, *tuple*) – httpStatus query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_discovery_by_specified_range(*records_to_delete*, *start_index*, *headers=None*,
***request_parameters*)

Stops discovery for the given range and removes them .

Parameters

- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_delete** (*int*) – recordsToDelete path parameter. Number of records to delete .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_discoveries_by_range(*records_to_return*, *start_index*, *headers=None*, ***request_parameters*)

Returns the discovery by specified range .

Parameters

- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_global_credentials(*credential_sub_type*, *order=None*, *sort_by=None*, *headers=None*, ***request_parameters*)

Returns global credential for the given credential sub type .

Parameters

- **credential_sub_type** (*basestring*) – credentialSubType query parameter. Credential type as CLI / SNMPV2_READ_COMMUNITY / SNMPV2_WRITE_COMMUNITY / SNMPV3 / HTTP_WRITE / HTTP_READ / NETCONF .
- **sort_by** (*basestring*) – sortBy query parameter.
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_cli_credentials(comments=None, credentialType=None, description=None,
                        enablePassword=None, id=None, instanceTenantId=None, instanceUuid=None,
                        password=None, username=None, headers=None, payload=None,
                        active_validation=True, **request_parameters)
```

Updates global CLI credentials .

Parameters

- **comments** (*string*) – Discovery’s comments.
- **credentialType** (*string*) – Discovery’s credentialType. Available values are ‘GLOBAL’ and ‘APP’.
- **description** (*string*) – Discovery’s description.
- **enablePassword** (*string*) – Discovery’s enablePassword.
- **id** (*string*) – Discovery’s id.
- **instanceTenantId** (*string*) – Discovery’s instanceTenantId.
- **instanceUuid** (*string*) – Discovery’s instanceUuid.
- **password** (*string*) – Discovery’s password.
- **username** (*string*) – Discovery’s username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_cli_credentials(headers=None, payload=None, active_validation=True, **request_parameters)
```

Adds global CLI credential .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_http_read_credentials(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds HTTP read credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_http_read_credential(*comments=None, credentialType=None, description=None, id=None, instanceTenantId=None, instanceUuid=None, password=None, port=None, secure=None, username=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates global HTTP Read credential .

Parameters

- **comments** (*string*) – Discovery's comments.
- **credentialType** (*string*) – Discovery's credentialType. Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's description.
- **id** (*string*) – Discovery's id.
- **instanceTenantId** (*string*) – Discovery's instanceTenantId.
- **instanceUuid** (*string*) – Discovery's instanceUuid.

- **password** (*string*) – Discovery’s password.
- **port** (*integer*) – Discovery’s port.
- **secure** (*boolean*) – Discovery’s secure.
- **username** (*string*) – Discovery’s username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_http_write_credentials(*comments=None, credentialType=None, description=None, id=None, instanceTenantId=None, instanceUuid=None, password=None, port=None, secure=None, username=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates global HTTP write credentials .

Parameters

- **comments** (*string*) – Discovery’s comments.
- **credentialType** (*string*) – Discovery’s credentialType. Available values are ‘GLOBAL’ and ‘APP’.
- **description** (*string*) – Discovery’s description.
- **id** (*string*) – Discovery’s id.
- **instanceTenantId** (*string*) – Discovery’s instanceTenantId.
- **instanceUuid** (*string*) – Discovery’s instanceUuid.
- **password** (*string*) – Discovery’s password.
- **port** (*integer*) – Discovery’s port.
- **secure** (*boolean*) – Discovery’s secure.
- **username** (*string*) – Discovery’s username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_http_write_credentials(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global HTTP write credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_netconf_credentials(*comments=None, credentialType=None, description=None, id=None, instanceTenantId=None, instanceUuid=None, netconfPort=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates global netconf credentials .

Parameters

- **comments** (*string*) – Discovery's comments.
- **credentialType** (*string*) – Discovery's credentialType. Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's description.
- **id** (*string*) – Discovery's id.
- **instanceTenantId** (*string*) – Discovery's instanceTenantId.

- **instanceUuid** (*string*) – Discovery’s instanceUuid.
- **netconfPort** (*string*) – Discovery’s netconfPort.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_netconf_credentials(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global netconf credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_snmp_read_community(*comments=None, credentialType=None, description=None, instanceUuid=None, readCommunity=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates global SNMP read community .

Parameters

- **comments** (*string*) – Discovery’s Comments to identify the credential .

- **credentialType** (*string*) – Discovery’s Credential type to identify the application that uses the credential . Available values are ‘GLOBAL’ and ‘APP’.
- **description** (*string*) – Discovery’s Name/Description of the credential .
- **instanceUuid** (*string*) – Discovery’s instanceUuid.
- **readCommunity** (*string*) – Discovery’s SNMP read community. NO!\$DATA!\$ for no value change .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_snmp_read_community(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global SNMP read community .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_snmp_write_community(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global SNMP write community .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_snmp_write_community(*comments=None, credentialType=None, description=None, instanceUuid=None, writeCommunity=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates global SNMP write community .

Parameters

- **comments** (*string*) – Discovery's Comments to identify the credential .
- **credentialType** (*string*) – Discovery's Credential type to identify the application that uses the credential . Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's Name/Description of the credential .
- **instanceUuid** (*string*) – Discovery's instanceUuid.
- **writeCommunity** (*string*) – Discovery's SNMP write community. NO!\$DATA!\$ for no value change .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_snmpv3_credentials(authPassword=None, authType=None, comments=None,  
                           credentialType=None, description=None, id=None, instanceTenantId=None,  
                           instanceUuid=None, privacyPassword=None, privacyType=None,  
                           snmpMode=None, username=None, headers=None, payload=None,  
                           active_validation=True, **request_parameters)
```

Updates global SNMPv3 credential .

Parameters

- **authPassword** (*string*) – Discovery's authPassword.
- **authType** (*string*) – Discovery's authType. Available values are 'SHA' and 'MD5'.
- **comments** (*string*) – Discovery's comments.
- **credentialType** (*string*) – Discovery's credentialType. Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's description.
- **id** (*string*) – Discovery's id.
- **instanceTenantId** (*string*) – Discovery's instanceTenantId.
- **instanceUuid** (*string*) – Discovery's instanceUuid.
- **privacyPassword** (*string*) – Discovery's privacyPassword.
- **privacyType** (*string*) – Discovery's privacyType. Available values are 'DES' and 'AES128'.
- **snmpMode** (*string*) – Discovery's snmpMode. Available values are 'AUTHPRIV', 'AUTHNOPRIV' and 'NOAUTHNOPRIV'.
- **username** (*string*) – Discovery's username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_snmpv3_credentials(headers=None, payload=None, active_validation=True,
                           **request_parameters)
```

Adds global SNMPv3 credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
delete_global_credentials_by_id(global_credential_id, headers=None, **request_parameters)
```

Deletes global credential for the given ID .

Parameters

- **global_credential_id** (*basestring*) – globalCredentialId path parameter. ID of global-credential .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_global_credentials(global_credential_id, siteUids=None, headers=None, payload=None,
                           active_validation=True, **request_parameters)
```

Update global credential for network devices in site(s) .

Parameters

- **siteUids** (*list*) – Discovery's siteUids (list of strings).

- **global_credential_id** (*basestring*) – globalCredentialId path parameter. Global credential Uuid .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_credential_sub_type_by_credential_id(*id*, *headers=None*, ***request_parameters*)

Returns the credential sub type for the given Id .

Parameters

- **id** (*basestring*) – id path parameter. Global Credential ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_snmp_properties(*headers=None*, ***request_parameters*)

Returns SNMP properties .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_update_snmp_properties(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds SNMP properties .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

event_management**class EventManagement**

Cisco DNA Center Event Management API (version: 2.2.3.3).

Wraps the DNA Center Event Management API and exposes the API as native Python methods that return native Python objects.

get_auditlog_parent_records(*category=None, context=None, description=None, device_id=None, domain=None, end_time=None, event_hierarchy=None, event_id=None, instance_id=None, is_system_events=None, limit=None, name=None, offset=None, order=None, severity=None, site_id=None, sort_by=None, source=None, start_time=None, sub_domain=None, user_id=None, headers=None, **request_parameters*)

Get Parent Audit Log Event instances from the Event-Hub .

Parameters

- **instance_id** (*basestring*) – instanceId query parameter. InstanceID of the Audit Log. .
- **name** (*basestring*) – name query parameter. Audit Log notification event name. .
- **event_id** (*basestring*) – eventId query parameter. Audit Log notification’s event ID. .
- **category** (*basestring*) – category query parameter. Audit Log notification’s event category. Supported values: INFO, WARN, ERROR, ALERT, TASK_PROGRESS, TASK_FAILURE, TASK_COMPLETE, COMMAND, QUERY, CONVERSATION .
- **severity** (*basestring*) – severity query parameter. Audit Log notification’s event severity. Supported values: 1, 2, 3, 4, 5. .
- **domain** (*basestring*) – domain query parameter. Audit Log notification’s event domain. .
- **sub_domain** (*basestring*) – subDomain query parameter. Audit Log notification’s event sub-domain. .
- **source** (*basestring*) – source query parameter. Audit Log notification’s event source. .
- **user_id** (*basestring*) – userId query parameter. Audit Log notification’s event userId. .
- **context** (*basestring*) – context query parameter. Audit Log notification’s event correlationId. .
- **event_hierarchy** (*basestring*) – eventHierarchy query parameter. Audit Log notification’s event eventHierarchy. Example: “US.CA.San Jose” OR “US.CA” OR “CA.San Jose” Delimiter for hierarchy separation is “.”. .
- **site_id** (*basestring*) – siteId query parameter. Audit Log notification’s siteId. .
- **device_id** (*basestring*) – deviceId query parameter. Audit Log notification’s deviceId. .
- **is_system_events** (*bool*) – isSystemEvents query parameter. Parameter to filter system generated audit-logs. .
- **description** (*basestring*) – description query parameter. String full/partial search (Provided input string is case insensitively matched for records). .
- **offset** (*int*) – offset query parameter. Position of a particular Audit Log record in the data. .
- **limit** (*int*) – limit query parameter. Number of Audit Log records to be returned per page. .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds since Epoch Eg. 1597950637211 (when provided endTime is mandatory) .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds since Epoch Eg. 1597961437211 (when provided startTime is mandatory) .
- **sort_by** (*basestring*) – sortBy query parameter. Sort the Audit Logs by certain fields. Supported values are event notification header attributes. .
- **order** (*basestring*) – order query parameter. Order of the sorted Audit Log records. Default value is desc by timestamp. Supported values: asc, desc. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

`list`

Raises

- **`TypeError`** – If the parameter types are incorrect.
- **`MalformedRequest`** – If the request body created is invalid.
- **`ApiError`** – If the DNA Center cloud returns an error.

```
get_auditlog_summary(category=None, context=None, description=None, device_id=None,
                      domain=None, end_time=None, event_hierarchy=None, event_id=None,
                      instance_id=None, is_parent_only=None, is_system_events=None, name=None,
                      parent_instance_id=None, severity=None, site_id=None, source=None,
                      start_time=None, sub_domain=None, user_id=None, headers=None,
                      **request_parameters)
```

Get Audit Log Summary from the Event-Hub .

Parameters

- **`parent_instance_id`** (*basestring*) – parentId query parameter. Parent Audit Log record's instanceID. .
- **`is_parent_only`** (*bool*) – isParentOnly query parameter. Parameter to filter parent only audit-logs. .
- **`instance_id`** (*basestring*) – instanceId query parameter. InstanceID of the Audit Log. .
- **`name`** (*basestring*) – name query parameter. Audit Log notification event name. .
- **`event_id`** (*basestring*) – eventId query parameter. Audit Log notification's event ID. .
- **`category`** (*basestring*) – category query parameter. Audit Log notification's event category. Supported values: INFO, WARN, ERROR, ALERT, TASK_PROGRESS, TASK_FAILURE, TASK_COMPLETE, COMMAND, QUERY, CONVERSATION .
- **`severity`** (*basestring*) – severity query parameter. Audit Log notification's event severity. Supported values: 1, 2, 3, 4, 5. .
- **`domain`** (*basestring*) – domain query parameter. Audit Log notification's event domain. .
- **`sub_domain`** (*basestring*) – subDomain query parameter. Audit Log notification's event sub-domain. .
- **`source`** (*basestring*) – source query parameter. Audit Log notification's event source. .
- **`user_id`** (*basestring*) – userId query parameter. Audit Log notification's event userId. .
- **`context`** (*basestring*) – context query parameter. Audit Log notification's event correlationId. .
- **`event_hierarchy`** (*basestring*) – eventHierarchy query parameter. Audit Log notification's event eventHierarchy. Example: "US.CA.San Jose" OR "US.CA" OR "CA.San Jose" Delimiter for hierarchy separation is ".". .
- **`site_id`** (*basestring*) – siteId query parameter. Audit Log notification's siteId. .

- **device_id** (*basestring*) – deviceId query parameter. Audit Log notification’s deviceId. .
- **is_system_events** (*bool*) – isSystemEvents query parameter. Parameter to filter system generated audit-logs. .
- **description** (*basestring*) – description query parameter. String full/partial search (Provided input string is case insensitively matched for records). .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds since Epoch Eg. 1597950637211 (when provided endTime is mandatory) .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds since Epoch Eg. 1597961437211 (when provided startTime is mandatory) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_auditlog_records(*category=None, context=None, description=None, device_id=None, domain=None, end_time=None, event_hierarchy=None, event_id=None, instance_id=None, is_system_events=None, limit=None, name=None, offset=None, order=None, parent_instance_id=None, severity=None, site_id=None, sort_by=None, source=None, start_time=None, sub_domain=None, user_id=None, headers=None, **request_parameters*)

Get Audit Log Event instances from the Event-Hub .

Parameters

- **parent_instance_id** (*basestring*) – parentInstanceId query parameter. Parent Audit Log record’s instanceID. .
- **instance_id** (*basestring*) – instanceId query parameter. InstanceID of the Audit Log. .
- **name** (*basestring*) – name query parameter. Audit Log notification event name. .
- **event_id** (*basestring*) – eventId query parameter. Audit Log notification’s event ID. .
- **category** (*basestring*) – category query parameter. Audit Log notification’s event category. Supported values: INFO, WARN, ERROR, ALERT, TASK_PROGRESS, TASK_FAILURE, TASK_COMPLETE, COMMAND, QUERY, CONVERSATION .
- **severity** (*basestring*) – severity query parameter. Audit Log notification’s event severity. Supported values: 1, 2, 3, 4, 5. .
- **domain** (*basestring*) – domain query parameter. Audit Log notification’s event domain. .

- **sub_domain** (*basestring*) – subDomain query parameter. Audit Log notification’s event sub-domain. .
- **source** (*basestring*) – source query parameter. Audit Log notification’s event source. .
- **user_id** (*basestring*) – userId query parameter. Audit Log notification’s event userId. .
- **context** (*basestring*) – context query parameter. Audit Log notification’s event correlationId. .
- **event_hierarchy** (*basestring*) – eventHierarchy query parameter. Audit Log notification’s event eventHierarchy. Example: “US.CA.San Jose” OR “US.CA” OR “CA.San Jose” Delimiter for hierarchy separation is “.”. .
- **site_id** (*basestring*) – siteId query parameter. Audit Log notification’s siteId. .
- **device_id** (*basestring*) – deviceId query parameter. Audit Log notification’s deviceId. .
- **is_system_events** (*bool*) – isSystemEvents query parameter. Parameter to filter system generated audit-logs. .
- **description** (*basestring*) – description query parameter. String full/partial search (Provided input string is case insensitively matched for records). .
- **offset** (*int*) – offset query parameter. Position of a particular Audit Log record in the data. .
- **limit** (*int*) – limit query parameter. Number of Audit Log records to be returned per page. .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds since Epoch Eg. 1597950637211 (when provided endTime is mandatory) .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds since Epoch Eg. 1597961437211 (when provided startTime is mandatory) .
- **sort_by** (*basestring*) – sortBy query parameter. Sort the Audit Logs by certain fields. Supported values are event notification header attributes. .
- **order** (*basestring*) – order query parameter. Order of the sorted Audit Log records. Default value is desc by timestamp. Supported values: asc, desc. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_status_api_for_events(*execution_id*, *headers=None*, ***request_parameters*)

Get the Status of events API calls with provided executionId as mandatory path parameter .

Parameters

- **execution_id** (*basestring*) – executionId path parameter. Execution ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_notifications(*category=None*, *domain=None*, *end_time=None*, *event_ids=None*, *limit=None*, *offset=None*, *order=None*, *severity=None*, *sort_by=None*, *source=None*, *start_time=None*, *sub_domain=None*, *type=None*, *headers=None*, ***request_parameters*)

Get the list of Published Notifications .

Parameters

- **event_ids** (*basestring*) – eventIds query parameter. The registered EventId should be provided .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds .
- **category** (*basestring*) – category query parameter.
- **type** (*basestring*) – type query parameter.
- **severity** (*basestring*) – severity query parameter.
- **domain** (*basestring*) – domain query parameter.
- **sub_domain** (*basestring*) – subDomain query parameter. Sub Domain .
- **source** (*basestring*) – source query parameter.
- **offset** (*int*) – offset query parameter. Start Offset .
- **limit** (*int*) – limit query parameter. # of records .
- **sort_by** (*basestring*) – sortBy query parameter. Sort By column .
- **order** (*basestring*) – order query parameter. Ascending/Descending order [asc/desc] .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

`list`

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

count_of_notifications(*category=None, domain=None, end_time=None, event_ids=None, severity=None, source=None, start_time=None, sub_domain=None, type=None, headers=None, **request_parameters*)

Get the Count of Published Notifications .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. The registered EventId should be provided .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds .
- **category** (*basestring*) – category query parameter.
- **type** (*basestring*) – type query parameter.
- **severity** (*basestring*) – severity query parameter.
- **domain** (*basestring*) – domain query parameter.
- **sub_domain** (*basestring*) – subDomain query parameter. Sub Domain .
- **source** (*basestring*) – source query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

`MyDict`

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_event_subscriptions(*event_ids=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of Subscriptions's based on provided offset and limit .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of subscriptions related to the respective eventId .
- **offset** (*int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_event_subscriptions(*subscriptions*, *headers=None*, ***request_parameters*)

Delete EventSubscriptions .

Parameters

- **subscriptions** (*basestring*) – subscriptions query parameter. List of EventSubscriptionId's for removal .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_event_subscriptions(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Update SubscriptionEndpoint to list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_event_subscriptions(*headers=None, payload=None, active_validation=True, **request_parameters*)

Subscribe SubscriptionEndpoint to list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_email_subscription_details(*connector_type, instance_id=None, name=None, headers=None, **request_parameters*)

Gets the list of subscription details for specified connectorType .

Parameters

- **connector_type** (*basestring*) – connectorType query parameter. Connector Type [EMAIL] .
- **name** (*basestring*) – name query parameter. Name of the specific configuration .

- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the specific configuration .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_rest_webhook_subscription_details(*connector_type*, *instance_id=None*, *name=None*,
headers=None, ***request_parameters*)

Gets the list of subscription details for specified connectorType .

Parameters

- **connector_type** (*basestring*) – connectorType query parameter. Connector Type [REST] .
- **name** (*basestring*) – name query parameter. Name of the specific configuration .
- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the specific configuration .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_syslog_subscription_details(*connector_type*, *instance_id=None*, *name=None*, *headers=None*,
***request_parameters*)

Gets the list of subscription details for specified connectorType .

Parameters

- **connector_type** (*basestring*) – connectorType query parameter. Connector Type [SYSLOG] .

- **name** (*basestring*) – name query parameter. Name of the specific configuration .
- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the specific configuration .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

count_of_event_subscriptions(*event_ids*, *headers=None*, ***request_parameters*)

Returns the Count of EventSubscriptions .

Parameters

- **event_ids** (*basestring*) – eventIds query parameter. List of subscriptions related to the respective eventIds .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_email_event_subscription(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Create Email Subscription Endpoint for list of registered events. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_email_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update Email Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_email_event_subscriptions(*event_ids=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of email Subscriptions's based on provided offset and limit .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of email subscriptions related to the respective eventIds (Comma separated event ids) .
- **offset** (*int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_rest_webhook_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create Rest/Webhook Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_rest_webhook_event_subscriptions(*event_ids=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of Rest/Webhook Subscriptions's based on provided offset and limit .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of subscriptions related to the respective eventIds (Comma separated event ids) .
- **offset** (*int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .

- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_rest_webhook_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update Rest/Webhook Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_syslog_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update Syslog Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_syslog_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create Syslog Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_syslog_event_subscriptions(*event_ids=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of Syslog Subscriptions's based on provided offset and limit .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of subscriptions related to the respective eventIds (Comma separated event ids) .
- **offset** (*int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_events(tags, event_id=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters)

Gets the list of registered Events with provided eventIds or tags as mandatory .

Parameters

- **event_id** (basestring) – eventId query parameter. The registered EventId should be provided .
- **tags** (basestring) – tags query parameter. The registered Tags should be provided .
- **offset** (int) – offset query parameter. The number of Registries to offset in the resultset whose default value 0 .
- **limit** (int) – limit query parameter. The number of Registries to limit in the resultset whose default value 10 .
- **sort_by** (basestring) – sortBy query parameter. SortBy field name .
- **order** (basestring) – order query parameter.
- **headers** (dict) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

count_of_events(tags, event_id=None, headers=None, **request_parameters)

Get the count of registered events with provided eventIds or tags as mandatory .

Parameters

- **event_id** (basestring) – eventId query parameter. The registered EventId should be provided .

- **tags** (*basestring*) – tags query parameter. The registered Tags should be provided .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_eventartifacts(*event_ids=None, limit=None, offset=None, order=None, search=None, sort_by=None, tags=None, headers=None, **request_parameters*)

Gets the list of artifacts based on provided offset and limit .

Parameters

- **event_ids** (*basestring*) – eventIds query parameter. List of eventIds .
- **tags** (*basestring*) – tags query parameter. Tags defined .
- **offset** (*int*) – offset query parameter. Record start offset .
- **limit** (*int*) – limit query parameter. # of records to return in result set .
- **sort_by** (*basestring*) – sortBy query parameter. Sort by field .
- **order** (*basestring*) – order query parameter. sorting order (asc/desc) .
- **search** (*basestring*) – search query parameter. find matches in name, description, eventId, type, category .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

eventartifact_count(*headers=None, **request_parameters*)

Get the count of registered event artifacts with provided eventIds or tags as mandatory .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

fabric_wireless**class FabricWireless**

Cisco DNA Center Fabric Wireless API (version: 2.2.3.3).

Wraps the DNA Center Fabric Wireless API and exposes the API as native Python methods that return native Python objects.

add_ssid_to_ip_pool_mapping(*scalableGroupName=None, siteNameHierarchy=None, ssidNames=None, vlanName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Add SSID to IP Pool Mapping. .

Parameters

- **scalableGroupName** (*string*) – Fabric Wireless's Scalable Group Name .
- **siteNameHierarchy** (*string*) – Fabric Wireless's Site Name Hierarchy .
- **ssidNames** (*list*) – Fabric Wireless's List of SSIDs (list of strings).
- **vlanName** (*string*) – Fabric Wireless's VLAN Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

update_ssid_to_ip_pool_mapping(*scalableGroupName=None, siteNameHierarchy=None, ssidNames=None, vlanName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Update SSID to IP Pool Mapping. .

Parameters

- **scalableGroupName** (*string*) – Fabric Wireless’s Scalable Group Name .
- **siteNameHierarchy** (*string*) – Fabric Wireless’s Site Name Hierarchy .
- **ssidNames** (*list*) – Fabric Wireless’s List of SSIDs (list of strings).
- **vlanName** (*string*) – Fabric Wireless’s VLAN Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_ssid_to_ip_pool_mapping(*site_name_hierarchy, vlan_name, headers=None, **request_parameters*)

Get SSID to IP Pool Mapping .

Parameters

- **vlan_name** (*basestring*) – vlanName query parameter. VLAN Name .
- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. Site Name Heirarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

remove_w_l_c_from_fabric_domain(*device_ipaddress*, *headers=None*, ***request_parameters*)

Remove WLC from Fabric Domain .

Parameters

- **device_ipaddress** (*basestring*) – deviceIPAddress query parameter. Device Management IP Address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_w_l_c_to_fabric_domain(*deviceName=None*, *siteNameHierarchy=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add WLC to Fabric Domain .

Parameters

- **deviceName** (*string*) – Fabric Wireless's EWLC Device Name .
- **siteNameHierarchy** (*string*) – Fabric Wireless's Site Name Hierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

file**class File**

Cisco DNA Center File API (version: 2.2.3.3).

Wraps the DNA Center File API and exposes the API as native Python methods that return native Python objects.

get_list_of_available_namespaces(*headers=None, **request_parameters*)

Returns list of available namespaces .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_list_of_files(*name_space, headers=None, **request_parameters*)

Returns list of files under a specific namespace .

Parameters

- **name_space** (*basestring*) – nameSpace path parameter. A listing of fileId's .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

download_a_file_by_fileid(*file_id, dirpath=None, save_file=None, filename=None, headers=None, **request_parameters*)

Downloads a file specified by fileId .

Parameters

- **file_id** (*basestring*) – fileId path parameter. File Identification number .
- **dirpath** (*basestring*) – Directory absolute path. Defaults to `os.getcwd()`.
- **save_file** (*bool*) – Enable or disable automatic file creation of raw response.
- **filename** (*basestring*) – The filename used to save the download file.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

The DownloadResponse wrapper. Wraps the `urllib3.response.HTTPResponse`. For more information check the [urllib3 documentation](#)

Return type

DownloadResponse

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.
- **DownloadFailure** – If was not able to download the raw
- **response to a file.** –

health_and_performance

class HealthAndPerformance

Cisco DNA Center Health and Performance API (version: 2.2.3.3).

Wraps the DNA Center Health and Performance API and exposes the API as native Python methods that return native Python objects.

system_health(*domain=None, limit=None, offset=None, subdomain=None, summary=None, headers=None, **request_parameters*)

This API retrieves the latest system events .

Parameters

- **summary** (*bool*) – summary query parameter. Fetch the latest high severity event .
- **domain** (*basestring*) – domain query parameter. Fetch system events with this domain. Possible values of domain are listed here : `/dna/platform/app/consumer-portal/developer-toolkit/events` .
- **subdomain** (*basestring*) – subdomain query parameter. Fetch system events with this subdomain. Possible values of subdomain are listed here : `/dna/platform/app/consumer-portal/developer- toolkit/events` .
- **limit** (*int*) – limit query parameter.
- **offset** (*int*) – offset query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

system_health_count(*domain=None, subdomain=None, headers=None, **request_parameters*)

This API gives the count of the latest system events .

Parameters

- **domain** (*basestring*) – domain query parameter. Fetch system events with this domain. Possible values of domain are listed here : /dna/platform/app/consumer-portal/developer-toolkit/events .
- **subdomain** (*basestring*) – subdomain query parameter. Fetch system events with this subdomain. Possible values of subdomain are listed here : /dna/platform/app/consumer-portal/developer-toolkit/events .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

system_performance(*end_time=None, function=None, kpi=None, start_time=None, headers=None, **request_parameters*)

This API gives the aggregated performance indicators. The data can be retrieved for the last 3 months. .

Parameters

- **kpi** (*basestring*) – kpi query parameter. Valid values: cpu,memory,network .
- **function** (*basestring*) – function query parameter. Valid values: sum,average,max .
- **start_time** (*int*) – startTime query parameter. This is the epoch start time in milliseconds from which performance indicator need to be fetched .

- **end_time** (*int*) – endTime query parameter. This is the epoch end time in milliseconds upto which performance indicator need to be fetched .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

system_performance_historical(*end_time=None, kpi=None, start_time=None, headers=None, **request_parameters*)

This API retrieves the historical performance indicators . The data can be retrieved for the last 3 months. .

Parameters

- **kpi** (*basestring*) – kpi query parameter. Fetch historical data for this kpi. Valid values: cpu,memory,network .
- **start_time** (*int*) – startTime query parameter. This is the epoch start time in milliseconds from which performance indicator need to be fetched .
- **end_time** (*int*) – endTime query parameter. This is the epoch end time in milliseconds upto which performance indicator need to be fetched .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

itsm

class Itsm

Cisco DNA Center ITSM API (version: 2.2.3.3).

Wraps the DNA Center ITSM API and exposes the API as native Python methods that return native Python objects.

get_cmdb_sync_status(*date=None, status=None, headers=None, **request_parameters*)

This API allows to retrieve the detail of CMDB sync status. It accepts two query parameter “status”, “date”. The supported values for status field are “Success”, “Failed”, “Unknown” and date field should be in “YYYY-MM-DD” format. By default all the cmdb sync status will be send as response and based on the query parameter filtered detail will be send as response. .

Parameters

- **status** (*basestring*) – status query parameter. Supported values are “Success”, “Failed” and “Unknown”. Providing other values will result in all the available sync job status. .
- **date** (*basestring*) – date query parameter. Provide date in “YYYY-MM-DD” format .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_failed_itsm_events(*instance_id=None, headers=None, **request_parameters*)

Used to retrieve the list of integration events that failed to create tickets in ITSM .

Parameters

- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the failed event as in the Runtime Dashboard .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

retry_integration_events(*headers=None, payload=None, active_validation=True, **request_parameters*)

Allows retry of multiple failed ITSM event instances. The retry request payload can be given as a list of strings: ["instance1","instance2","instance3",...] A minimum of one instance Id is mandatory. The list of failed event instance Ids can be retrieved using the 'Get Failed ITSM Events' API in the 'instanceId' attribute. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

issues

class Issues

Cisco DNA Center Issues API (version: 2.2.3.3).

Wraps the DNA Center Issues API and exposes the API as native Python methods that return native Python objects.

get_issue_enrichment_details(*headers=None, **request_parameters*)

Enriches a given network issue context (an issue id or end user's Mac Address) with details about the issue(s), impacted hosts and suggested actions for remediation .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

issues(*ai_driven=None, device_id=None, end_time=None, issue_status=None, mac_address=None, priority=None, site_id=None, start_time=None, headers=None, **request_parameters*)

Intent API to get a list of global issues, issues for a specific device, or issue for a specific client device's MAC address. .

Parameters

- **start_time** (*int*) – startTime query parameter. Starting epoch time in milliseconds of query time window .
- **end_time** (*int*) – endTime query parameter. Ending epoch time in milliseconds of query time window .
- **site_id** (*basestring*) – siteId query parameter. Assurance UUID value of the site in the issue content .
- **device_id** (*basestring*) – deviceId query parameter. Assurance UUID value of the device in the issue content .
- **mac_address** (*basestring*) – macAddress query parameter. Client's device MAC address of the issue (format xx:xx:xx:xx:xx:xx) .
- **priority** (*basestring*) – priority query parameter. The issue's priority value (One of P1, P2, P3, or P4)(Use only when macAddress and deviceId are not provided) .
- **ai_driven** (*basestring*) – aiDriven query parameter. The issue's AI driven value (Yes or No)(Use only when macAddress and deviceId are not provided) .
- **issue_status** (*basestring*) – issueStatus query parameter. The issue's status value (One of ACTIVE, IGNORED, RESOLVED) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

licenses

class Licenses

Cisco DNA Center Licenses API (version: 2.2.3.3).

Wraps the DNA Center Licenses API and exposes the API as native Python methods that return native Python objects.

device_count_details(*device_type=None, dna_level=None, registration_status=None, smart_account_id=None, virtual_account_name=None, headers=None, **request_parameters*)

Get total number of managed device(s). .

Parameters

- **device_type** (*basestring*) – device_type query parameter. Type of device .
- **registration_status** (*basestring*) – registration_status query parameter. Smart license registration status of device .
- **dna_level** (*basestring*) – dna_level query parameter. Device Cisco DNA license level .
- **virtual_account_name** (*basestring*) – virtual_account_name query parameter. Name of virtual account .
- **smart_account_id** (*basestring*) – smart_account_id query parameter. Id of smart account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_license_summary(*limit, order, page_number, device_type=None, device_uuid=None, dna_level=None, registration_status=None, smart_account_id=None, sort_by=None, virtual_account_name=None, headers=None, **request_parameters*)

Show license summary of device(s). .

Parameters

- **page_number** (*int*) – page_number query parameter. Page number of response .
- **order** (*basestring*) – order query parameter. Sorting order .
- **sort_by** (*basestring*) – sort_by query parameter. Sort result by field .

- **dna_level** (*basestring*) – dna_level query parameter. Device Cisco DNA license level .
- **device_type** (*basestring*) – device_type query parameter. Type of device .
- **limit** (*int*) – limit query parameter.
- **registration_status** (*basestring*) – registration_status query parameter. Smart license registration status of device .
- **virtual_account_name** (*basestring*) – virtual_account_name query parameter. Name of virtual account .
- **smart_account_id** (*int*) – smart_account_id query parameter. Id of smart account .
- **device_uuid** (*basestring*) – device_uuid query parameter. Id of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_license_details(*device_uuid*, *headers=None*, ***request_parameters*)

Get detailed license information of a device. .

Parameters

- **device_uuid** (*basestring*) – device_uuid path parameter. Id of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_deregistration(*device_uuids=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Deregister device(s) from CSSM(Cisco Smart Software Manager). .

Parameters

- **device_uuids** (*list*) – Licenses’s Comma separated device ids (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_registration(*virtual_account_name, device_uuids=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Register device(s) in CSSM(Cisco Smart Software Manager). .

Parameters

- **device_uuids** (*list*) – Licenses’s Comma separated device ids (list of strings).
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of virtual account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

change_virtual_account(*smart_account_id*, *virtual_account_name*, *device_uuids=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Transfer device(s) from one virtual account to another within same smart account. .

Parameters

- **device_uuids** (*list*) – Licenses’s Comma separated device ids (list of strings).
- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of target virtual account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

virtual_account_details(*smart_account_id*, *headers=None*, ***request_parameters*)

Get virtual account details of a smart account. .

Parameters

- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

smart_account_details(*headers=None, **request_parameters*)

Get detail of all smart accounts. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

license_term_details(*device_type, smart_account_id, virtual_account_name, headers=None, **request_parameters*)

Get license term details. .

Parameters

- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of virtual account. Putting “All” will give license term detail for all virtual accounts. .
- **device_type** (*basestring*) – device_type query parameter. Type of device like router, switch, wireless or ise .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

license_usage_details(*device_type, smart_account_id, virtual_account_name, headers=None, **request_parameters*)

Get count of purchased and in use Cisco DNA and Network licenses. .

Parameters

- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of virtual account. Putting “All” will give license usage detail for all virtual accounts. .
- **device_type** (*basestring*) – device_type query parameter. Type of device like router, switch, wireless or ise .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

network_settings**class NetworkSettings**

Cisco DNA Center Network Settings API (version: 2.2.3.3).

Wraps the DNA Center Network Settings API and exposes the API as native Python methods that return native Python objects.

assign_credential_to_site(*site_id*, *cliId=None*, *httpRead=None*, *httpWrite=None*, *snmpV2ReadId=None*, *snmpV2WriteId=None*, *snmpV3Id=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Assign Device Credential To Site .

Parameters

- **cliId** (*string*) – Network Settings’s Cli Id.
- **httpRead** (*string*) – Network Settings’s Http Read.
- **httpWrite** (*string*) – Network Settings’s Http Write.
- **snmpV2ReadId** (*string*) – Network Settings’s Snmp V2 Read Id.
- **snmpV2WriteId** (*string*) – Network Settings’s Snmp V2 Write Id.
- **snmpV3Id** (*string*) – Network Settings’s Snmp V3 Id.
- **site_id** (*basestring*) – siteId path parameter. site id to assign credential. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_device_credentials(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to create device credentials. .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_device_credentials(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to update device credentials. .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_credential_details(*site_id=None, headers=None, **request_parameters*)

API to get device credential details. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Site id to retrieve the credential details associated with the site. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_device_credential(*id, headers=None, **request_parameters*)

Delete device credential. .

Parameters

- **id** (*basestring*) – id path parameter. global credential id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_global_pool(*limit=None, offset=None, headers=None, **request_parameters*)

API to get global pool. .

Parameters

- **offset** (*basestring*) – offset query parameter. offset/starting row .
- **limit** (*basestring*) – limit query parameter. No of Global Pools to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_global_pool(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to update global pool .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_global_pool(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to create global pool. .

Parameters

- **settings** (*object*) – Network Settings’s settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_global_ip_pool(*id, headers=None, **request_parameters*)

API to delete global IP pool. .

Parameters

- **id** (*basestring*) – id path parameter. global pool id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_network(*site_id=None, headers=None, **request_parameters*)

API to get DHCP and DNS center server details. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Site id to get the network settings associated with the site. .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_network(*site_id*, *settings=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

API to create a network for DHCP and DNS center server settings. .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **site_id** (*basestring*) – siteId path parameter. Site id to which site details to associate with the network settings. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_network(*site_id*, *settings=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

API to update network for DHCP and DNS center server settings. .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **site_id** (*basestring*) – siteId path parameter. Site id to update the network settings which is associated with the site .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_reserve_ip_subpool(*limit=None, offset=None, site_id=None, headers=None, **request_parameters*)

API to get the ip subpool info. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. site id to get the reserve ip associated with the site .
- **offset** (*basestring*) – offset query parameter. offset/starting row .
- **limit** (*basestring*) – limit query parameter. No of Global Pools to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

release_reserve_ip_subpool(*id, headers=None, **request_parameters*)

API to delete the reserved ip subpool .

Parameters

- **id** (*basestring*) – id path parameter. Id of reserve ip subpool to be deleted. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
reserve_ip_subpool(site_id, ipv4DhcpServers=None, ipv4DnsServers=None, ipv4GateWay=None,
                    ipv4GlobalPool=None, ipv4Prefix=None, ipv4PrefixLength=None, ipv4Subnet=None,
                    ipv4TotalHost=None, ipv6AddressSpace=None, ipv6DhcpServers=None,
                    ipv6DnsServers=None, ipv6GateWay=None, ipv6GlobalPool=None,
                    ipv6Prefix=None, ipv6PrefixLength=None, ipv6Subnet=None, ipv6TotalHost=None,
                    name=None, slaacSupport=None, type=None, headers=None, payload=None,
                    active_validation=True, **request_parameters)
```

API to reserve an ip subpool from the global pool .

Parameters

- **ipv4DhcpServers** (*list*) – Network Settings's IPv4 input for dhcp server ip example: 1.1.1.1 (list of strings).
- **ipv4DnsServers** (*list*) – Network Settings's IPv4 input for dns server ip example: 4.4.4.4 (list of strings).
- **ipv4GateWay** (*string*) – Network Settings's Gateway ip address details, example: 175.175.0.1 .
- **ipv4GlobalPool** (*string*) – Network Settings's IP v4 Global pool address with cidr, example: 175.175.0.0/16 .
- **ipv4Prefix** (*boolean*) – Network Settings's IPv4 prefix value is true, the ip4 prefix length input field is enabled , if it is false ipv4 total Host input is enable .
- **ipv4PrefixLength** (*integer*) – Network Settings's The ipv4 prefix length is required when ipv4prefix value is true. .
- **ipv4Subnet** (*string*) – Network Settings's IPv4 Subnet address, example: 175.175.0.0 .
- **ipv4TotalHost** (*integer*) – Network Settings's IPv4 total host is required when ipv4prefix value is false. .
- **ipv6AddressSpace** (*boolean*) – Network Settings's If the value is false only ipv4 input are required, otherwise both ipv6 and ipv4 are required .
- **ipv6DhcpServers** (*list*) – Network Settings's IPv6 format dhcp server as input example : 2001:db8::1234 (list of strings).
- **ipv6DnsServers** (*list*) – Network Settings's IPv6 format dns server input example: 2001:db8::1234 (list of strings).
- **ipv6GateWay** (*string*) – Network Settings's Gateway ip address details, example: 2001:db8:85a3:0:100::1 .
- **ipv6GlobalPool** (*string*) – Network Settings's IPv6 Global pool address with cidr this is required when Ipv6AddressSpace value is true, example: 2001:db8:85a3::/64 .

- **ipv6Prefix** (*boolean*) – Network Settings’s Ipv6 prefix value is true, the ip6 prefix length input field is enabled , if it is false ipv6 total Host input is enable .
- **ipv6PrefixLength** (*integer*) – Network Settings’s IPv6 prefix length is required when the ipv6prefix value is true .
- **ipv6Subnet** (*string*) – Network Settings’s IPv6 Subnet address, example :2001:db8:85a3:0:100:: .
- **ipv6TotalHost** (*integer*) – Network Settings’s IPv6 total host is required when ipv6prefix value is false. .
- **name** (*string*) – Network Settings’s Name of the reserve ip sub pool .
- **slaacSupport** (*boolean*) – Network Settings’s Slaac Support.
- **type** (*string*) – Network Settings’s Type of the reserve ip sub pool . Available values are ‘Generic’, ‘LAN’, ‘WAN’, ‘management’ and ‘service’.
- **site_id** (*basestring*) – siteId path parameter. Site id to reserve the ip sub pool. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_reserve_ip_subpool(id, site_id, ipv4DhcpServers=None, ipv4DnsServers=None,
                          ipv4GateWay=None, ipv6AddressSpace=None, ipv6DhcpServers=None,
                          ipv6DnsServers=None, ipv6GateWay=None, ipv6GlobalPool=None,
                          ipv6Prefix=None, ipv6PrefixLength=None, ipv6Subnet=None,
                          ipv6TotalHost=None, name=None, slaacSupport=None, headers=None,
                          payload=None, active_validation=True, **request_parameters)
```

API to update ip subpool from the global pool .

Parameters

- **ipv4DhcpServers** (*list*) – Network Settings’s IPv4 input for dhcp server ip example: 1.1.1.1 (list of strings).
- **ipv4DnsServers** (*list*) – Network Settings’s IPv4 input for dns server ip example: 4.4.4.4 (list of strings).
- **ipv4GateWay** (*string*) – Network Settings’s Ipv4 Gate Way.
- **ipv6AddressSpace** (*boolean*) – Network Settings’s If the value is false only ipv4 input are required, otherwise both ipv6 and ipv4 are required .

- **ipv6DhcpServers** (*list*) – Network Settings’s IPv6 format dhcp server as input example : 2001:db8::1234 (list of strings).
- **ipv6DnsServers** (*list*) – Network Settings’s IPv6 format dns server input example: 2001:db8::1234 (list of strings).
- **ipv6GateWay** (*string*) – Network Settings’s Gateway ip address details, example: 2001:db8:85a3:0:100::1 .
- **ipv6GlobalPool** (*string*) – Network Settings’s IP v6 Global pool address with cidr this is required when Ipv6AddressSpace value is true, example: 2001:db8:85a3::/64 .
- **ipv6Prefix** (*boolean*) – Network Settings’s IPv6 prefix value is true, the ip6 prefix length input field is enabled , if it is false ipv6 total Host input is enable .
- **ipv6PrefixLength** (*integer*) – Network Settings’s IPv6 prefix length is required when the ipv6prefix value is true .
- **ipv6Subnet** (*string*) – Network Settings’s IPv6 Subnet address, example :2001:db8:85a3:0:100:: .
- **ipv6TotalHost** (*integer*) – Network Settings’s IPv6 total host is required when ipv6prefix value is false. .
- **name** (*string*) – Network Settings’s Name of the reserve ip sub pool .
- **slaacSupport** (*boolean*) – Network Settings’s Slaac Support.
- **site_id** (*basestring*) – siteId path parameter. Site id of site to update sub pool. .
- **id** (*basestring*) – id query parameter. Id of subpool to be associated with the site .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_service_provider_details(*headers=None, **request_parameters*)

API to get service provider details (QoS). .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_sp_profile(settings=None, headers=None, payload=None, active_validation=True,  
                 **request_parameters)
```

API to create service provider profile(QOS). .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_sp_profile(settings=None, headers=None, payload=None, active_validation=True,  
                 **request_parameters)
```

API to update SP profile .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_sp_profile(*sp_profile_name*, *headers=None*, ***request_parameters*)

API to delete Service Provider profile (QoS). .

Parameters

- **sp_profile_name** (*basestring*) – spProfileName path parameter. sp profile name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

path_trace

class PathTrace

Cisco DNA Center Path Trace API (version: 2.2.3.3).

Wraps the DNA Center Path Trace API and exposes the API as native Python methods that return native Python objects.

retrives_all_previous_pathtraces_summary(*dest_ip=None*, *dest_port=None*, *gt_create_time=None*, *last_update_time=None*, *limit=None*, *lt_create_time=None*, *offset=None*, *order=None*, *periodic_refresh=None*, *protocol=None*, *sort_by=None*, *source_ip=None*, *source_port=None*, *status=None*, *task_id=None*, *headers=None*, ***request_parameters*)

Returns a summary of all flow analyses stored. Results can be filtered by specified parameters. .

Parameters

- **periodic_refresh** (*bool*) – periodicRefresh query parameter. Is analysis periodically refreshed? .

- **source_ip** (*basestring*) – sourceIP query parameter. Source IP address .
- **dest_ip** (*basestring*) – destIP query parameter. Destination IP adress .
- **source_port** (*basestring*) – sourcePort query parameter. Source port .
- **dest_port** (*basestring*) – destPort query parameter. Destination port .
- **gt_create_time** (*basestring*) – gtCreateTime query parameter. Analyses requested after this time .
- **lt_create_time** (*basestring*) – ltCreateTime query parameter. Analyses requested before this time .
- **protocol** (*basestring*) – protocol query parameter.
- **status** (*basestring*) – status query parameter.
- **task_id** (*basestring*) – taskId query parameter. Task ID .
- **last_update_time** (*basestring*) – lastUpdateTime query parameter. Last update time .
- **limit** (*basestring*) – limit query parameter. Number of resources returned .
- **offset** (*basestring*) – offset query parameter. Start index of resources returned (1-based) .
- **order** (*basestring*) – order query parameter. Order by this field .
- **sort_by** (*basestring*) – sortBy query parameter. Sort by this field .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

initiate_a_new_pathtrace(*controlPath=None, destIP=None, destPort=None, inclusions=None, periodicRefresh=None, protocol=None, sourceIP=None, sourcePort=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Initiates a new flow analysis with periodic refresh and stat collection options. Returns a request id and a task id to get results and follow progress. .

Parameters

- **controlPath** (*boolean*) – Path Trace's controlPath.
- **destIP** (*string*) – Path Trace's destIP.
- **destPort** (*string*) – Path Trace's destPort.

- **inclusions** (*list*) – Path Trace’s inclusions (list of strings).
- **periodicRefresh** (*boolean*) – Path Trace’s periodicRefresh.
- **protocol** (*string*) – Path Trace’s protocol.
- **sourceIP** (*string*) – Path Trace’s sourceIP.
- **sourcePort** (*string*) – Path Trace’s sourcePort.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

retrieves_previous_pathtrace(*flow_analysis_id*, *headers=None*, ***request_parameters*)

Returns result of a previously requested flow analysis by its Flow Analysis id .

Parameters

- **flow_analysis_id** (*basestring*) – flowAnalysisId path parameter. Flow analysis request id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deletes_pathtrace_by_id(*flow_analysis_id*, *headers=None*, ***request_parameters*)

Deletes a flow analysis request by its id .

Parameters

- **flow_analysis_id** (*basestring*) – flowAnalysisId path parameter. Flow analysis request id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

platform_configuration**class PlatformConfiguration**

Cisco DNA Center Platform Configuration API (version: 2.2.3.3).

Wraps the DNA Center Platform Configuration API and exposes the API as native Python methods that return native Python objects.

release_summary(*headers=None, **request_parameters*)

Provides information such as API version, mandatory core packages for installation or upgrade, optional packages, Cisco DNA Center name and version, supported direct updates, and tenant ID. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

nodes_configuration_summary(*headers=None, **request_parameters*)

Provides details about the current Cisco DNA Center node configuration, such as API version, node name, NTP server, intracenter link, LACP mode, network static routes, DNS server, subnet mask, host IP, default gateway, and interface information. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

policy

class Policy

Cisco DNA Center Policy API (version: 2.2.3.3).

Wraps the DNA Center Policy API and exposes the API as native Python methods that return native Python objects.

```
create_a_profiling_rule(clusterId=None, conditionGroups=None, isDeleted=None,  
                        lastModifiedBy=None, lastModifiedOn=None, pluginId=None, rejected=None,  
                        result=None, ruleId=None, ruleName=None, rulePriority=None,  
                        ruleType=None, ruleVersion=None, sourcePriority=None,  
                        usedAttributes=None, headers=None, payload=None, active_validation=True,  
                        **request_parameters)
```

Creates profiling rule from the request body. .

Parameters

- **clusterId** (*string*) – Policy's Unique identifier for ML cluster. Only applicable for 'ML Rule'. .
- **conditionGroups** (*object*) – Policy's conditionGroups.
- **isDeleted** (*boolean*) – Policy's Flag to indicate whether the rule was deleted. .
- **lastModifiedBy** (*string*) – Policy's User that last modified the rule. It is read-only, and is ignored if provided as part of input request. .
- **lastModifiedOn** (*integer*) – Policy's Timestamp (in epoch milliseconds) of last modification. It is read- only, and is ignored if provided as part of input request. .
- **pluginId** (*string*) – Policy's Plugin for the rule. Only applicable for 'Cisco Default' rules. .
- **rejected** (*boolean*) – Policy's Flag to indicate whether rule has been rejected by user or not. Only applicable for 'ML Rule'. .
- **result** (*object*) – Policy's result.
- **ruleId** (*string*) – Policy's Unique identifier for the rule. This is normally generated by the system, and client does not need to provide it for rules that need to be newly created. .

- **ruleName** (*string*) – Policy’s Human readable name for the rule. .
- **rulePriority** (*integer*) – Policy’s Priority for the rule. .
- **ruleType** (*string*) – Policy’s Type of the rule. Allowed values are ‘Cisco Default Static’, ‘Cisco Default Dynamic’, ‘Custom Rule’, ‘ML Rule’. .
- **ruleVersion** (*integer*) – Policy’s Version of the rule. .
- **sourcePriority** (*integer*) – Policy’s Source priority for the rule. .
- **usedAttributes** (*list*) – Policy’s List of attributes used in the rule. Only applicable for ‘Cisco Default’ rules. (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_list_of_profiling_rules(*include_deleted=None, limit=None, offset=None, order=None, rule_type=None, sort_by=None, headers=None, **request_parameters*)

This API fetches the list of profiling rules. It can be used to show profiling rules in client applications, or export those from an environment. ‘POST /profiling-rules/bulk’ API can be used to import such exported rules into another environment. If this API is used to export rules to be imported into another Cisco DNA Center system, then ensure that ‘includeDeleted’ parameter is ‘true’, so that deleted rules get synchronized correctly. Use query parameters to filter the data, as required. If no filter is provided, then it will include only rules of type ‘Custom Rule’ in the response. By default, the response is limited to 500 records. Use ‘limit’ parameter to fetch higher number of records, if required. ‘GET /profiling-rules/count’ API can be used to find out the total number of rules in the system. .

Parameters

- **rule_type** (*basestring*) – ruleType query parameter. Use comma-separated list of rule types to filter the data. Defaults to ‘Custom Rule’. .
- **include_deleted** (*bool*) – includeDeleted query parameter. Flag to indicate whether deleted rules should be part of the records fetched. .
- **limit** (*int*) – limit query parameter. Maximum number of records to be fetched. If not provided, 500 records will be fetched by default. To fetch all the records in the system, provide a large value for this parameter. .
- **offset** (*int*) – offset query parameter. Record offset to start data fetch at. Offset starts at zero. .

- **sort_by** (*basestring*) – sortBy query parameter. Name of the column to sort the results on. Please note that fetch might take more time if sorting is requested. .
- **order** (*basestring*) – order query parameter. Order to be used for sorting. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
import_profiling_rules_in_bulk(profileingRules=None, headers=None, payload=None,  
                               active_validation=True, **request_parameters)
```

This API imports the given list of profiling rules. For each record, 1) If 'ruleType' for a record is not 'Custom Rule', then it is rejected. 2) If 'ruleId' is provided in the input record, 2a) Record with same 'ruleId' exists in the system, then it is replaced with new data. 2b) Record with same 'ruleId' does not exist, then it is inserted in the database. 3) If 'ruleId' is not provided in the input record, then new 'ruleId' is generated by the system, and record is inserted. .

Parameters

- **profilingRules** (*list*) – Policy's profilingRules (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_count_of_profiling_rules(include_deleted=None, rule_type=None, headers=None,  
                             **request_parameters)
```

This API fetches the count of profiling rules based on the filter values provided in the query parameters.

The filter parameters are same as that of ‘GET /profiling-rules’ API, excluding the pagination and sort parameters. .

Parameters

- **rule_type** (*basestring*) – ruleType query parameter. Use comma-separated list of rule types to filter the data. Defaults to ‘Custom Rule’. .
- **include_deleted** (*bool*) – includeDeleted query parameter. Flag to indicate whether deleted rules should be part of the records fetched. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_an_existing_profiling_rule(rule_id, clusterId=None, conditionGroups=None,
                                isDeleted=None, lastModifiedBy=None, lastModifiedOn=None,
                                pluginId=None, rejected=None, result=None, ruleId=None,
                                ruleName=None, rulePriority=None, ruleType=None,
                                ruleVersion=None, sourcePriority=None, usedAttributes=None,
                                headers=None, payload=None, active_validation=True,
                                **request_parameters)
```

Updates the profiling rule for the given ‘ruleId’. .

Parameters

- **clusterId** (*string*) – Policy’s Unique identifier for ML cluster. Only applicable for ‘ML Rule’. .
- **conditionGroups** (*object*) – Policy’s conditionGroups.
- **isDeleted** (*boolean*) – Policy’s Flag to indicate whether the rule was deleted. .
- **lastModifiedBy** (*string*) – Policy’s User that last modified the rule. It is read-only, and is ignored if provided as part of input request. .
- **lastModifiedOn** (*integer*) – Policy’s Timestamp (in epoch milliseconds) of last modification. It is read- only, and is ignored if provided as part of input request. .
- **pluginId** (*string*) – Policy’s Plugin for the rule. Only applicable for ‘Cisco Default’ rules. .
- **rejected** (*boolean*) – Policy’s Flag to indicate whether rule has been rejected by user or not. Only applicable for ‘ML Rule’. .
- **result** (*object*) – Policy’s result.
- **ruleId** (*string*) – Policy’s Unique identifier for the rule. This is normally generated by the system, and client does not need to provide it for rules that need to be newly created. .

- **ruleName** (*string*) – Policy’s Human readable name for the rule. .
- **rulePriority** (*integer*) – Policy’s Priority for the rule. .
- **ruleType** (*string*) – Policy’s Type of the rule. Allowed values are ‘Cisco Default Static’, ‘Cisco Default Dynamic’, ‘Custom Rule’, ‘ML Rule’. .
- **ruleVersion** (*integer*) – Policy’s Version of the rule. .
- **sourcePriority** (*integer*) – Policy’s Source priority for the rule. .
- **usedAttributes** (*list*) – Policy’s List of attributes used in the rule. Only applicable for ‘Cisco Default’ rules. (list of strings).
- **rule_id** (*basestring*) – ruleId path parameter. Unique rule identifier .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_details_of_a_single_profiling_rule(*rule_id*, *headers=None*, ***request_parameters*)

Fetches details of the profiling rule for the given ‘ruleId’. .

Parameters

- **rule_id** (*basestring*) – ruleId path parameter. Unique rule identifier .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_an_existing_profiling_rule(*rule_id*, *headers=None*, ***request_parameters*)

Deletes the profiling rule for the given ‘ruleId’ .

Parameters

- **rule_id** (*basestring*) – ruleId path parameter. Unique rule identifier .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

reports

class Reports

Cisco DNA Center Reports API (version: 2.2.3.3).

Wraps the DNA Center Reports API and exposes the API as native Python methods that return native Python objects.

create_or_schedule_a_report(*deliveries=None*, *name=None*, *schedule=None*, *tags=None*, *view=None*, *viewGroupId=None*, *viewGroupVersion=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Create/Schedule a report configuration. Use “Get view details for a given view group & view” API to get the metadata required to configure a report. .

Parameters

- **deliveries** (*list*) – Reports’s Array of available delivery channels (list of objects).
- **name** (*string*) – Reports’s report name .
- **schedule** (*object*) – Reports’s schedule.
- **tags** (*list*) – Reports’s array of tags for report (list of strings).
- **view** (*object*) – Reports’s view.
- **viewGroupId** (*string*) – Reports’s viewGroupId of the viewgroup for the report .
- **viewGroupVersion** (*string*) – Reports’s version of viewgroup for the report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_list_of_scheduled_reports(*view_group_id=None, view_id=None, headers=None, **request_parameters*)

Get list of scheduled report configurations. .

Parameters

- **view_group_id** (*basestring*) – viewGroupId query parameter. viewGroupId of view-group for report .
- **view_id** (*basestring*) – viewId query parameter. viewId of view for report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_a_scheduled_report(*report_id, headers=None, **request_parameters*)

Get scheduled report configuration by reportId .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_a_scheduled_report(*report_id*, *headers=None*, ***request_parameters*)

Delete a scheduled report configuration. Deletes the report executions also. .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_all_execution_details_for_a_given_report(*report_id*, *headers=None*, ***request_parameters*)

Get details of all executions for a given report .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

download_report_content(*execution_id*, *report_id*, *dirpath=None*, *save_file=None*, *filename=None*, *headers=None*, ***request_parameters*)

Returns report content. Save the response to a file by converting the response data as a blob and setting the file format available from content-disposition response header. .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .
- **execution_id** (*basestring*) – executionId path parameter. executionId of report execution .
- **dirpath** (*basestring*) – Directory absolute path. Defaults to os.getcwd().
- **save_file** (*bool*) – Enable or disable automatic file creation of raw response.
- **filename** (*basestring*) – The filename used to save the download file.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

The DownloadResponse wrapper. Wraps the urllib3.response.HTTPResponse. For more information check the [urllib3 documentation](#)

Return type

DownloadResponse

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.
- **DownloadFailure** – If was not able to download the raw
- **response to a file.** –

get_all_view_groups(*headers=None*, ***request_parameters*)

Gives a list of summary of all view groups. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_views_for_a_given_view_group(*view_group_id*, *headers=None*, ***request_parameters*)

Gives a list of summary of all views in a viewgroup. Use “Get all view groups” API to get the viewGroupIds (required as a query param for this API) for available viewgroups. .

Parameters

- **view_group_id** (*basestring*) – viewGroupId path parameter. viewGroupId of view-group. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_view_details_for_a_given_view_group_and_view(*view_group_id*, *view_id*, *headers=None*, ***request_parameters*)

Gives complete information of the view that is required to configure a report. Use “Get views for a given view group” API to get the viewIds (required as a query param for this API) for available views. .

Parameters

- **view_group_id** (*basestring*) – viewGroupId path parameter. viewGroupId of view-group .
- **view_id** (*basestring*) – viewId path parameter. view id of view .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sda

class Sda

Cisco DNA Center SDA API (version: 2.2.3.3).

Wraps the DNA Center SDA API and exposes the API as native Python methods that return native Python objects.

get_default_authentication_profile(*site_name_hierarchy*, *authenticate_template_name=None*,
headers=None, ***request_parameters*)

Get default authentication profile from SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **authenticate_template_name** (*basestring*) – authenticateTemplateName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_default_authentication_profile(*authenticateTemplateName=None*, *siteNameHierarchy=None*,
headers=None, *payload=None*, *active_validation=True*,
***request_parameters*)

Deploy authentication template in SDA Fabric .

Parameters

- **authenticateTemplateName** (*string*) – SDA's Authenticate Template Name. Allowed values are 'No Authentication', 'Open Authentication', 'Closed Authentication', 'Low Impact' .
- **siteNameHierarchy** (*string*) – SDA's Site Name Hierarchy should be a valid fabric site name hierarchy. e.g Global/USA/San Jose .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_default_authentication_profile(authenticateTemplateName=None,
                                       authenticationOrder=None,
                                       dot1xToMabFallbackTimeout=None, numberOfHosts=None,
                                       siteNameHierarchy=None, wakeOnLan=None,
                                       headers=None, payload=None, active_validation=True,
                                       **request_parameters)
```

Update default authentication profile in SDA Fabric .

Parameters

- **authenticateTemplateName** (*string*) – SDA's Authenticate Template Name. Allowed values are 'Open Authentication', 'Closed Authentication', 'No Authentication', 'Low Impact' .
- **authenticationOrder** (*string*) – SDA's Authentication Order. Allowed values are 'dot1x', 'mac' .
- **dot1xToMabFallbackTimeout** (*string*) – SDA's In a network that includes both devices that support and devices that do not support IEEE 802.1X, MAB can be deployed as a fallback, or complementary, mechanism to IEEE 802.1X. If the network does not have any IEEE 802.1X-capable devices, MAB can be deployed as a standalone authentication mechanism (e.g. [3-120]) .
- **numberOfHosts** (*string*) – SDA's Number of hosts specifies the number of data hosts that can be connected to a port. With Single selected, you can have only one data client on the port. With Unlimited selected, you can have multiple data clients and one voice client on the port . Available values are 'Unlimited' and 'Single'.
- **siteNameHierarchy** (*string*) – SDA's siteNameHierarchy should be a valid fabric site name hierarchy. e.g Global/USA/San Jose .
- **wakeOnLan** (*boolean*) – SDA's The IEEE 802.1X Wake on LAN (WoL) Support feature allows dormant systems to be powered up when the switch receives a specific Ethernet frame. You can use this feature in cases when hosts on power save and needs to receive a magic packet to turn them on. This feature works on a per subnet basis and send the subnet broadcast to all hosts in the subnet .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_default_authentication_profile(*site_name_hierarchy*, *headers=None*,
 ***request_parameters*)

Add default authentication profile in SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

adds_border_device(*borderSessionType=None*, *connectedToInternet=None*,
 deviceManagementIpAddress=None, *externalAutonomouSystemNumber=None*,
 externalConnectivityIpPoolName=None, *externalConnectivitySettings=None*,
 externalDomainRoutingProtocolName=None, *interfaceName=None*,
 internalAutonomouSystemNumber=None, *l3Handoff=None*,
 siteNameHierarchy=None, *virtualNetwork=None*, *virtualNetworkName=None*,
 vlanId=None, *headers=None*, *payload=None*, *active_validation=True*,
 ***request_parameters*)

Adds border device in SDA Fabric .

Parameters

- **borderSessionType** (*string*) – SDA's Border Session Type . Available values are 'EXTERNAL', 'INTERNAL' and 'ANYWHERE'.
- **connectedToInternet** (*boolean*) – SDA's Connected to Internet .
- **deviceManagementIpAddress** (*string*) – SDA's Management Ip Address of the Device which is provisioned successfully .

- **externalAutonomousSystemNumber** (*string*) – SDA’s External Autonomous System Number will be used to automate IP routing between Border Node and remote peer (e.g.,1-65535) .
- **externalConnectivityIpPoolName** (*string*) – SDA’s IP pool to use to automate IP routing between the border node and remote peer. .
- **externalConnectivitySettings** (*object*) – SDA’s External Connectivity Settings information of L3 Handoff .
- **externalDomainRoutingProtocolName** (*string*) – SDA’s External Domain Routing Protocol Name. (Example: BGP) .
- **interfaceName** (*string*) – SDA’s Interface Name .
- **internalAutonomousSystemNumber** (*string*) – SDA’s Internal Autonomous System Number used by border node to communicate with remote peer (e.g.,1-65535) .
- **l3Handoff** (*object*) – SDA’s L3 Handoff information .
- **siteNameHierarchy** (*string*) – SDA’s Site Name Hierarchy for device location(site should be fabric site) .
- **virtualNetwork** (*object*) – SDA’s Virtual Network information of L3 Hand off .
- **virtualNetworkName** (*string*) – SDA’s Virtual Network Name assigned to site .
- **vlanId** (*string*) – SDA’s Vlan Id (e.g.,2-4096 except for reserved VLANs (1002-1005, 2046, 4095)) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

gets_border_device_detail(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Gets border device detail from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deletes_border_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Deletes border device from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – *deviceManagementIpAddress* query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_control_plane_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Delete control plane device in SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – *deviceManagementIpAddress* query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_control_plane_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Get control plane device from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – *deviceManagementIpAddress* query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_control_plane_device(*deviceManagementIpAddress=None*, *siteNameHierarchy=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add control plane device in SDA Fabric .

Parameters

- **deviceManagementIpAddress** (*string*) – SDA's Management Ip Address of the Device which is provisioned successfully .
- **siteNameHierarchy** (*string*) – SDA's Site Name Hierarchy of provisioned Device(site should be fabric site) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_device_info(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Get device info from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – *deviceManagementIpAddress* query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_role_in_sda_fabric(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Get device role in SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – *deviceManagementIpAddress* query parameter. Device Management IP Address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_edge_device(*deviceManagementIpAddress=None*, *siteNameHierarchy=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add edge device in SDA Fabric .

Parameters

- **deviceManagementIpAddress** (*string*) – SDA’s Management Ip Address of the Device which is provisioned successfully .
- **siteNameHierarchy** (*string*) – SDA’s Site Name Hierarchy of provisioned Device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_edge_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Delete edge device from SDA Fabric. .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_edge_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Get edge device from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_sda_fabric(*fabric_name*, *headers=None*, ****request_parameters**)

Delete SDA Fabric .

Parameters

- **fabric_name** (*basestring*) – fabricName query parameter. Fabric Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_sda_fabric_info(*fabric_name*, *headers=None*, ****request_parameters**)

Get SDA Fabric Info .

Parameters

- **fabric_name** (*basestring*) – fabricName query parameter. Fabric Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_fabric(*fabricName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Add SDA Fabric .

Parameters

- **fabricName** (*string*) – SDA's Fabric Name (from DNAC2.2.3 onwards following default fabric name Default_LAN_Fabric) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site(*site_name_hierarchy, headers=None, **request_parameters*)

Get Site info from SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. Site Name Hierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_site(*site_name_hierarchy*, *headers=None*, ***request_parameters*)

Delete Site from SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. Site Name Hierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_site(*fabricName=None*, *siteNameHierarchy=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add Site in SDA Fabric .

Parameters

- **fabricName** (*string*) – SDA's Fabric Name (should be existing fabric name) .
- **siteNameHierarchy** (*string*) – SDA's Site Name Hierarchy for provision device location. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_sda_fabric_count(*headers=None, **request_parameters*)

Get SDA Fabric Count .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_port_assignment_for_access_point(*authenticateTemplateName=None, dataIpAddressPoolName=None, deviceManagementIpAddress=None, interfaceDescription=None, interfaceName=None, siteNameHierarchy=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Add Port assignment for access point in SDA Fabric .

Parameters

- **authenticateTemplateName** (*string*) – SDA's Authenticate TemplateName associated to siteNameHierarchy. .
- **dataIpAddressPoolName** (*string*) – SDA's Ip Pool Name, that is assigned to INFRA_VN .
- **deviceManagementIpAddress** (*string*) – SDA's Management Ip Address of the edge device .
- **interfaceDescription** (*string*) – SDA's Details or note of interface assignment .
- **interfaceName** (*string*) – SDA's Interface Name of the edge device .
- **siteNameHierarchy** (*string*) – SDA's Site Name Hierarchy should be a valid fabric site name hierarchy. e.g Global/USA/San Jose .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_port_assignment_for_access_point(*device_management_ip_address*, *interface_name*,
headers=None, ***request_parameters*)

Delete Port assignment for access point in SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **interface_name** (*basestring*) – interfaceName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_port_assignment_for_access_point(*device_management_ip_address*, *interface_name*,
headers=None, ***request_parameters*)

Get Port assignment for access point in SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **interface_name** (*basestring*) – interfaceName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_port_assignment_for_user_device(*device_management_ip_address, interface_name, headers=None, **request_parameters*)

Delete Port assignment for user device in SDA Fabric. .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **interface_name** (*basestring*) – interfaceName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_port_assignment_for_user_device(*authenticateTemplateName=None, dataIpAddressPoolName=None, deviceManagementIpAddress=None, interfaceDescription=None, interfaceName=None, scalableGroupName=None, siteNameHierarchy=None, voiceIpAddressPoolName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Add Port assignment for user device in SDA Fabric. .

Parameters

- **authenticateTemplateName** (*string*) – SDA's Authenticate TemplateName associated to siteNameHierarchy. Allowed values are 'Open Authentication', 'Closed Authentication', 'Low Impact', 'No Authentication', ''. . Available values are 'Open Authentication', 'Closed Authentication', 'Low Impact', 'No Authentication' and ''.
- **dataIpAddressPoolName** (*string*) – SDA's Ip Pool Name, that is assigned to virtual network with traffic type as DATA(can't be empty if voiceIpAddressPoolName is empty) .
- **deviceManagementIpAddress** (*string*) – SDA's Management Ip Address of the edge device .
- **interfaceDescription** (*string*) – SDA's Details or note of interface assignment .
- **interfaceName** (*string*) – SDA's Interface Name of the edge device .

- **scalableGroupName** (*string*) – SDA’s valid name of a scalable group associated with virtual network(Scalable groups are only supported on No Auth profile because the other profiles assign SGTs from ISE) .
- **siteNameHierarchy** (*string*) – SDA’s Site Name Hierarchy should be a valid fabric site name hierarchy. e.g Global/USA/San Jose .
- **voiceIpAddressPoolName** (*string*) – SDA’s Ip Pool Name, that is assigned to virtual network with traffic type as VOICE(can’t be empty if dataIpAddressPoolName is empty) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_port_assignment_for_user_device(*device_management_ip_address, interface_name, headers=None, **request_parameters*)

Get Port assignment for user device in SDA Fabric. .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **interface_name** (*basestring*) – interfaceName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
add_multicast_in_sda_fabric(multicastMethod=None, multicastVnInfo=None, muticastType=None,  
siteNameHierarchy=None, headers=None, payload=None,  
active_validation=True, **request_parameters)
```

Add multicast in SDA fabric .

Parameters

- **multicastMethod** (*string*) – SDA’s Multicast Methods . Available values are ‘native_multicast’ and ‘’.
- **multicastVnInfo** (*object*) – SDA’s multicastVnInfo.
- **muticastType** (*string*) – SDA’s Muticast Type . Available values are ‘ssm’, ‘asm_with_external_rp’ and ‘’.
- **siteNameHierarchy** (*string*) – SDA’s Full path of sda fabric siteNameHierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_multicast_details_from_sda_fabric(site_name_hierarchy, headers=None,  
**request_parameters)
```

Get multicast details from SDA fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. fabric site name hierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_multicast_from_sda_fabric(*site_name_hierarchy*, *headers=None*, ***request_parameters*)

Delete multicast from SDA fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – *siteNameHierarchy* query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_provisioned_wired_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Delete provisioned Wired Device .

Parameters

- **device_management_ip_address** (*basestring*) – *deviceManagementIpAddress* query parameter. Valid IP address of the device currently provisioned in a fabric site .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

re_provision_wired_device(*deviceManagementIpAddress=None*, *siteNameHierarchy=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Re-Provision Wired Device .

Parameters

- **deviceManagementIpAddress** (*string*) – SDA’s Management Ip Address of the device to be re-provisioned .
- **siteNameHierarchy** (*string*) – SDA’s Site Name Hierarchy for device location(only building / floor level) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

provision_wired_device(*deviceManagementIpAddress=None, siteNameHierarchy=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Provision Wired Device .

Parameters

- **deviceManagementIpAddress** (*string*) – SDA’s Management Ip Address of the device to be provisioned .
- **siteNameHierarchy** (*string*) – SDA’s Site Name Hierarchy for device location(only building / floor level) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_provisioned_wired_device(device_management_ip_address, headers=None,  
                             **request_parameters)
```

Get Provisioned Wired Device .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
delete_vn(site_name_hierarchy, virtual_network_name, headers=None, **request_parameters)
```

Delete virtual network (VN) from SDA Fabric .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_vn(site_name_hierarchy, virtual_network_name, headers=None, **request_parameters)
```

Get virtual network (VN) from SDA Fabric .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_vn(*siteNameHierarchy=None, virtualNetworkName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Add virtual network (VN) in SDA Fabric .

Parameters

- **siteNameHierarchy** (*string*) – SDA's Site Name Hierarchy should be a valid fabric site name hierarchy.(e.g. Global/USA/San Jose) .
- **virtualNetworkName** (*string*) – SDA's Virtual Network Name, that is created in Global level .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_ip_pool_from_sda_virtual_network(*ip_pool_name, site_name_hierarchy, virtual_network_name, headers=None, **request_parameters*)

Get IP Pool from SDA Virtual Network .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **ip_pool_name** (*basestring*) – ipPoolName query parameter.

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
delete_ip_pool_from_sda_virtual_network(ip_pool_name, site_name_hierarchy,  
                                         virtual_network_name, headers=None,  
                                         **request_parameters)
```

Delete IP Pool from SDA Virtual Network .

Parameters

- **ip_pool_name** (*basestring*) – ipPoolName query parameter.
- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
add_ip_pool_in_sda_virtual_network(authenticationPolicyName=None, ipPoolName=None,  
                                    isL2FloodingEnabled=None, isThisCriticalPool=None,  
                                    isWirelessPool=None, poolType=None,  
                                    scalableGroupName=None, siteNameHierarchy=None,  
                                    trafficType=None, virtualNetworkName=None, vlanName=None,  
                                    headers=None, payload=None, active_validation=True,  
                                    **request_parameters)
```

Add IP Pool in SDA Virtual Network .

Parameters

- **authenticationPolicyName** (*string*) – SDA's Deprecated, same as vlanName, please use vlanName .
- **ipPoolName** (*string*) – SDA's Ip Pool Name, that is reserved to fabric siteNameHierarchy .
- **isL2FloodingEnabled** (*boolean*) – SDA's Layer2 flooding enablement flag .
- **isThisCriticalPool** (*boolean*) – SDA's Critical pool enablement flag where depending on the pool type (data or voice), a corresponding Critical Vlan gets assigned to the Critical Pool .
- **isWirelessPool** (*string*) – SDA's Wireless Pool enablement flag .
- **poolType** (*string*) – SDA's Pool Type (needed when assigning segment to INFRA_VN) (Example: AP.) .
- **scalableGroupName** (*string*) – SDA's Scalable Group, that is associated to Virtual Network .
- **siteNameHierarchy** (*string*) – SDA's Full path of sda fabric siteNameHierarchy .
- **trafficType** (*string*) – SDA's Traffic type . Available values are 'data' and 'voice'.
- **virtualNetworkName** (*string*) – SDA's Virtual Network Name, that is associated to fabric siteNameHierarchy .
- **vlanName** (*string*) – SDA's Vlan name for this segment, represent the segment name, if empty, vlanName would be auto generated by API .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
add_virtual_network_with_scalable_groups(isGuestVirtualNetwork=None,
                                       scalableGroupNames=None,
                                       virtualNetworkName=None, virtualNetworkType=None,
                                       headers=None, payload=None, active_validation=True,
                                       **request_parameters)
```

Add virtual network with scalable groups at global level .

Parameters

- **isGuestVirtualNetwork** (*boolean*) – SDA's To create guest virtual network .

- **scalableGroupNames** (*list*) – SDA’s Scalable Group to be associated to virtual network (list of strings).
- **virtualNetworkName** (*string*) – SDA’s Virtual Network Name to be assigned global level .
- **virtualNetworkType** (*string*) – SDA’s Virtual Network Type.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_virtual_network_with_scalable_groups(*virtual_network_name*, *headers=None*,
 ***request_parameters*)

Delete virtual network with scalable groups .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_virtual_network_with_scalable_groups(*virtual_network_name*, *headers=None*,
 ***request_parameters*)

Get virtual network with scalable groups .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_virtual_network_with_scalable_groups(isGuestVirtualNetwork=None,
                                           scalableGroupNames=None,
                                           virtualNetworkName=None,
                                           virtualNetworkType=None, headers=None,
                                           payload=None, active_validation=True,
                                           **request_parameters)
```

Update virtual network with scalable groups .

Parameters

- **isGuestVirtualNetwork** (*boolean*) – SDA's To create guest virtual network .
- **scalableGroupNames** (*list*) – SDA's Scalable Group to be associated to virtual network (list of strings).
- **virtualNetworkName** (*string*) – SDA's Virtual Network Name to be assigned global level .
- **virtualNetworkType** (*string*) – SDA's Virtual Network Type.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

security_advisories

class SecurityAdvisories

Cisco DNA Center Security Advisories API (version: 2.2.3.3).

Wraps the DNA Center Security Advisories API and exposes the API as native Python methods that return native Python objects.

get_advisories_list(*headers=None, **request_parameters*)

Retrieves list of advisories on the network .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_advisories_summary(*headers=None, **request_parameters*)

Retrieves summary of advisories on the network. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_devices_per_advisory(*advisory_id, headers=None, **request_parameters*)

Retrieves list of devices for an advisory .

Parameters

- **advisory_id** (*basestring*) – advisoryId path parameter. Advisory ID .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_advisory_ids_per_device(*device_id*, *headers=None*, ***request_parameters*)

Retrieves list of advisory IDs for a device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device instance UUID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_advisories_per_device(*device_id*, *headers=None*, ***request_parameters*)

Retrieves list of advisories for a device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device instance UUID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sensors**class Sensors**

Cisco DNA Center Sensors API (version: 2.2.3.3).

Wraps the DNA Center Sensors API and exposes the API as native Python methods that return native Python objects.

```
edit_sensor_test_template(locationInfoList=None, schedule=None, templateName=None,  
                           headers=None, payload=None, active_validation=True,  
                           **request_parameters)
```

Intent API to deploy, schedule, or edit and existing SENSOR test template .

Parameters

- **locationInfoList** (*list*) – Sensors's locationInfoList (list of objects).
- **schedule** (*object*) – Sensors's schedule.
- **templateName** (*string*) – Sensors's Template Name.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_sensor_test_template(apCoverage=None, connection=None, modelVersion=None, name=None,  
                           ssids=None, headers=None, payload=None, active_validation=True,  
                           **request_parameters)
```

Intent API to create a SENSOR test template with a new SSID, existing SSID, or both new and existing SSID .

Parameters

- **apCoverage** (*list*) – Sensors's apCoverage (list of objects).
- **connection** (*string*) – Sensors's Connection.

- **modelVersion** (*integer*) – Sensors’s Model Version.
- **name** (*string*) – Sensors’s Name.
- **ssids** (*list*) – Sensors’s ssids (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_sensor_test(*template_name=None, headers=None, **request_parameters*)

Intent API to delete an existing SENSOR test template .

Parameters

- **template_name** (*basestring*) – templateName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sensors(*site_id=None, headers=None, **request_parameters*)

Intent API to get a list of SENSOR devices .

Parameters

- **site_id** (*basestring*) – siteId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

run_now_sensor_test(*templateName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Intent API to run a deployed SENSOR test .

Parameters

- **templateName** (*string*) – Sensors's Template Name.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

duplicate_sensor_test_template(*newTemplateName=None, templateName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Intent API to duplicate an existing SENSOR test template .

Parameters

- **newTemplateName** (*string*) – Sensors's New Template Name.
- **templateName** (*string*) – Sensors's Template Name.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

site_design**class SiteDesign**

Cisco DNA Center Site Design API (version: 2.2.3.3).

Wraps the DNA Center Site Design API and exposes the API as native Python methods that return native Python objects.

provision_nfv(*provisioning=None, siteProfile=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Design and Provision single/multi NFV device with given site/area/building/floor . .

Parameters

- **provisioning** (*list*) – Site Design's provisioning (list of objects).
- **siteProfile** (*list*) – Site Design's siteProfile (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_details_by_ip(*device_ip, headers=None, **request_parameters*)

Returns provisioning device information for the specified IP address. .

Parameters

- **device_ip** (*basestring*) – deviceIp query parameter. Device to which the provisioning detail has to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

associate(*network_profile_id*, *site_id*, *headers=None*, ***request_parameters*)

Associate Site to a Network Profile .

Parameters

- **network_profile_id** (*basestring*) – networkProfileId path parameter. Network-Profile Id to be associated .
- **site_id** (*basestring*) – siteId path parameter. Site Id to be associated .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

disassociate(*network_profile_id*, *site_id*, *headers=None*, ***request_parameters*)

Disassociate a Site from a Network Profile .

Parameters

- **network_profile_id** (*basestring*) – networkProfileId path parameter. Network-Profile Id to be associated .
- **site_id** (*basestring*) – siteId path parameter. Site Id to be associated .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

nfv_provisioning_detail(*device_ip=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Checks the provisioning detail of an ENCS device including log information. .

Parameters

- **device_ip** (*string*) – Site Design's Device Ip.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_nfv_profile(*device=None, profileName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to create network profile for different NFV topologies .

Parameters

- **device** (*list*) – Site Design's device (list of objects).
- **profileName** (*string*) – Site Design's Name of the profile to create NFV profile .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_nfv_profile(*id*, *device=None*, *name=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

API to update a NFV Network profile .

Parameters

- **device** (*list*) – Site Design's device (list of objects).
- **id** (*basestring*) – id path parameter. Id of the NFV profile to be updated .
- **name** (*basestring*) – name query parameter. Name of the profile to be updated .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_nfv_profile(*id*, *limit=None*, *name=None*, *offset=None*, *headers=None*, ***request_parameters*)

API to get NFV network profile. .

Parameters

- **id** (*basestring*) – id path parameter. ID of network profile to retrieve. .
- **offset** (*basestring*) – offset query parameter. offset/starting row .
- **limit** (*basestring*) – limit query parameter. Number of profile to be retrieved .
- **name** (*basestring*) – name query parameter. Name of network profile to be retrieved .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_nfv_profile(*id*, *name=None*, *headers=None*, ***request_parameters*)

API to delete nfv network profile. .

Parameters

- **id** (*basestring*) – id path parameter. Id of nfv network profile to delete. .
- **name** (*basestring*) – name query parameter. Name of nfv network profile to delete. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_floormap(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Service to create a floor map with callback .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_floormaps(*headers=None, **request_parameters*)

List all floor maps .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_floormap(*floor_id, headers=None, **request_parameters*)

Service to delete an (empty) floor map with callback .

Parameters

- **floor_id** (*basestring*) – floorId path parameter. Group ID of floor to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_floormap(*floor_id, headers=None, payload=None, active_validation=True, **request_parameters*)

Service to create a floor map with callback .

Parameters

- **floor_id** (*basestring*) – floorId path parameter. Group ID of the floor to be modified .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_floormap(*floor_id*, *headers=None*, ***request_parameters*)

List specified floor map(s) .

Parameters

- **floor_id** (*basestring*) – floorId path parameter. Group Id of the specified floormap .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sites**class Sites**

Cisco DNA Center Sites API (version: 2.2.3.3).

Wraps the DNA Center Sites API and exposes the API as native Python methods that return native Python objects.

```
get_membership(site_id, device_family=None, limit=None, offset=None, serial_number=None,  
                headers=None, **request_parameters)
```

Getting the site children details and device details. .

Parameters

- **site_id** (*basestring*) – siteId path parameter. Site id to retrieve device associated with the site. .
- **offset** (*basestring*) – offset query parameter. offset/starting row .
- **limit** (*basestring*) – limit query parameter. Number of sites to be retrieved .
- **device_family** (*basestring*) – deviceFamily query parameter. Device family name .
- **serial_number** (*basestring*) – serialNumber query parameter. Device serial number .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_site(site=None, type=None, headers=None, payload=None, active_validation=True,  
            **request_parameters)
```

Creates site with area/building/floor with specified hierarchy. .

Parameters

- **site** (*object*) – Sites's site.
- **type** (*string*) – Sites's Type of site to create (eg: area, building, floor) . Available values are 'area', 'building' and 'floor'.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site(*limit=None, name=None, offset=None, site_id=None, type=None, headers=None, **request_parameters*)

Get site using siteNameHierarchy/siteId/type ,return all sites if these parameters are not given as input. .

Parameters

- **name** (*basestring*) – name query parameter. siteNameHierarchy (ex: global/groupName) .
- **site_id** (*basestring*) – siteId query parameter. Site id to which site details to retrieve. .
- **type** (*basestring*) – type query parameter. type (ex: area, building, floor) .
- **offset** (*basestring*) – offset query parameter. offset/starting row .
- **limit** (*basestring*) – limit query parameter. Number of sites to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site_health(*limit=None, offset=None, site_type=None, timestamp=None, headers=None, **request_parameters*)

Returns Overall Health information for all sites .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the Site Hierarchy data is required .
- **site_type** (*basestring*) – siteType query parameter. Type of the site to return. AREA or BUILDING. Default to AREA .
- **offset** (*int*) – offset query parameter. The offset value, starting from 1, of the first returned site entry. Default is 1. .
- **limit** (*int*) – limit query parameter. The max number of sites in the returned data set. Default is 25, and max at 50 .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site_count(*site_id=None, headers=None, **request_parameters*)

API to get site count .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Site id to retrieve site count. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_site(*site_id, site=None, type=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Update site area/building/floor with specified hierarchy and new values .

Parameters

- **site** (*object*) – Sites's site.
- **type** (*string*) – Sites's Type. Available values are 'area', 'building' and 'floor'.
- **site_id** (*basestring*) – siteId path parameter. Site id to which site details to be updated. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_site(*site_id*, *headers=None*, ***request_parameters*)

Delete site with area/building/floor by siteId. .

Parameters

- **site_id** (*basestring*) – siteId path parameter. Site id to which site details to be deleted. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

assign_device_to_site(*site_id*, *device=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Assigns list of devices to a site .

Parameters

- **device** (*list*) – Sites's device (list of objects).
- **site_id** (*basestring*) – siteId path parameter. Site id to which site the device to assign .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

software_image_management_swim**class SoftwareImageManagementSwim**

Cisco DNA Center Software Image Management (SWIM) API (version: 2.2.3.3).

Wraps the DNA Center Software Image Management (SWIM) API and exposes the API as native Python methods that return native Python objects.

trigger_software_image_activation(*schedule_validate=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Activates a software image on a given device. Software image must be present in the device flash .

Parameters

- **schedule_validate** (*bool*) – scheduleValidate query parameter. scheduleValidate, validates data before schedule (Optional) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

trigger_software_image_distribution(*headers=None, payload=None, active_validation=True, **request_parameters*)

Distributes a software image on a given device. Software image must be imported successfully into DNA Center before it can be distributed .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_software_image_details(application_type=None, created_time=None, family=None,
                           image_integrity_status=None, image_name=None, image_series=None,
                           image_size_greater_than=None, image_size_lesser_than=None,
                           image_uuid=None, is_cco_latest=None, is_cco_recommended=None,
                           is_tagged_golden=None, limit=None, name=None, offset=None,
                           sort_by=None, sort_order=None, version=None, headers=None,
                           **request_parameters)
```

Returns software image list based on a filter criteria. For example: “filterbyName = cat3k%” .

Parameters

- **image_uuid** (*basestring*) – imageUuid query parameter.
- **name** (*basestring*) – name query parameter.
- **family** (*basestring*) – family query parameter.
- **application_type** (*basestring*) – applicationType query parameter.
- **image_integrity_status** (*basestring*) – imageIntegrityStatus query parameter. imageIntegrityStatus FAILURE, UNKNOWN, VERIFIED .
- **version** (*basestring*) – version query parameter. software Image Version .
- **image_series** (*basestring*) – imageSeries query parameter. image Series .
- **image_name** (*basestring*) – imageName query parameter. image Name .
- **is_tagged_golden** (*bool*) – isTaggedGolden query parameter. is Tagged Golden .
- **is_cco_recommended** (*bool*) – isCCORecommended query parameter. is recommended from cisco.com .
- **is_cco_latest** (*bool*) – isCCOLatest query parameter. is latest from cisco.com .
- **created_time** (*int*) – createdTime query parameter. time in milliseconds (epoch format) .
- **image_size_greater_than** (*int*) – imageSizeGreaterThan query parameter. size in bytes .
- **image_size_lesser_than** (*int*) – imageSizeLesserThan query parameter. size in bytes .
- **sort_by** (*basestring*) – sortBy query parameter. sort results by this field .
- **sort_order** (*basestring*) – sortOrder query parameter. sort order ‘asc’ or ‘des’. Default is asc .

- **limit** (*int*) – limit query parameter.
- **offset** (*int*) – offset query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_family_identifiers(*headers=None, **request_parameters*)

API to get Device Family Identifiers for all Device Families that can be used for tagging an image golden. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

tag_as_golden_image(*deviceFamilyIdentifier=None, deviceRole=None, imageId=None, siteId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Golden Tag image. Set siteId as -1 for Global site. .

Parameters

- **deviceFamilyIdentifier** (*string*) – Software Image Management (SWIM)'s Device Family Identifier e.g. : 277696480-283933147, 277696480 .
- **deviceRole** (*string*) – Software Image Management (SWIM)'s Device Role. Permissible Values : ALL, UNKNOWN, ACCESS, BORDER ROUTER, DISTRIBUTION and CORE. .
- **imageId** (*string*) – Software Image Management (SWIM)'s imageId in uuid format. .
- **siteId** (*string*) – Software Image Management (SWIM)'s SiteId in uuid format. For Global Site “-1” to be used. .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

remove_golden_tag_for_image(*device_family_identifier, device_role, image_id, site_id, headers=None, **request_parameters*)

Remove golden tag. Set siteId as -1 for Global site. .

Parameters

- **site_id** (*basestring*) – siteId path parameter. Site Id in uuid format. Set siteId as -1 for Global site. .
- **device_family_identifier** (*basestring*) – deviceFamilyIdentifier path parameter. Device family identifier e.g. : 277696480-283933147, e.g. : 277696480 .
- **device_role** (*basestring*) – deviceRole path parameter. Device Role. Permissible Values : ALL, UNKNOWN, ACCESS, BORDER ROUTER, DISTRIBUTION and CORE. .
- **image_id** (*basestring*) – imageId path parameter. Image Id in uuid format. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_golden_tag_status_of_an_image(*device_family_identifier, device_role, image_id, site_id, headers=None, **request_parameters*)

Get golden tag status of an image. Set siteId as -1 for Global site. .

Parameters

- **site_id** (*basestring*) – siteId path parameter. Site Id in uuid format. Set siteId as -1 for Global site. .
- **device_family_identifier** (*basestring*) – deviceFamilyIdentifier path parameter. Device family identifier e.g. : 277696480-283933147, e.g. : 277696480 .
- **device_role** (*basestring*) – deviceRole path parameter. Device Role. Permissible Values : ALL, UNKNOWN, ACCESS, BORDER ROUTER, DISTRIBUTION and CORE. .
- **image_id** (*basestring*) – imageId path parameter. Image Id in uuid format. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
import_local_software_image(multipart_fields, multipart_monitor_callback, is_third_party=None,
                             third_party_application_type=None, third_party_image_family=None,
                             third_party_vendor=None, headers=None, **request_parameters)
```

Fetches a software image from local file system and uploads to DNA Center. Supported software image files extensions are bin, img, tar, smu, pie, aes, iso, ova, tar_gz and qcow2. Upload the file to the **file** form data field .

The following code gives an example of the multipart_fields.

```
multipart_fields={'file': ('file.zip', open('file.zip', 'rb'))}
multipart_fields={'file': ('file.txt', open('file.txt', 'rb'),
                           'text/plain',
                           {'X-My-Header': 'my-value'})}
multipart_fields=[('images', ('foo.png', open('foo.png', 'rb'),
                              'image/png')),
                  ('images', ('bar.png', open('bar.png', 'rb'), 'image/png'))]
```

The following example demonstrates how to use *multipart_monitor_callback=create_callback* to create a progress bar using clint.

```
from clint.textui.progress import Bar
def create_callback(encoder):
    encoder_len = encoder.len
    bar = Bar(expected_size=encoder_len,
              filled_char="=")
    def callback(monitor):
        bar.show(monitor.bytes_read)
    return callback
```

Parameters

- **is_third_party** (*bool*) – isThirdParty query parameter. Third party Image check .
- **third_party_vendor** (*basestring*) – thirdPartyVendor query parameter. Third Party Vendor .
- **third_party_image_family** (*basestring*) – thirdPartyImageFamily query parameter. Third Party image family .
- **third_party_application_type** (*basestring*) – thirdPartyApplicationType query parameter. Third Party Application Type .
- **multipart_fields** (*dict*) – Fields from which to create a multipart/form-data body.
- **multipart_monitor_callback** (*function*) – function used to monitor the progress of the upload.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
import_software_image_via_url(schedule_at=None, schedule_desc=None, schedule_origin=None,
                             headers=None, payload=None, active_validation=True,
                             **request_parameters)
```

Fetches a software image from remote file system (using URL for HTTP/FTP) and uploads to DNA Center. Supported image files extensions are bin, img, tar, smu, pie, aes, iso, ova, tar_gz and qcow2 .

Parameters

- **schedule_at** (*basestring*) – scheduleAt query parameter. Epoch Time (The number of milli-seconds since January 1 1970 UTC) at which the distribution should be scheduled (Optional) .
- **schedule_desc** (*basestring*) – scheduleDesc query parameter. Custom Description (Optional) .
- **schedule_origin** (*basestring*) – scheduleOrigin query parameter. Originator of this call (Optional) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

tag**class Tag**

Cisco DNA Center Tag API (version: 2.2.3.3).

Wraps the DNA Center Tag API and exposes the API as native Python methods that return native Python objects.

```
update_tag(description=None, dynamicRules=None, id=None, instanceTenantId=None, name=None,  
            systemTag=None, headers=None, payload=None, active_validation=True,  
            **request_parameters)
```

Updates a tag specified by id .

Parameters

- **description** (*string*) – Tag's description.
- **dynamicRules** (*list*) – Tag's dynamicRules (list of objects).
- **id** (*string*) – Tag's id.
- **instanceTenantId** (*string*) – Tag's instanceTenantId.
- **name** (*string*) – Tag's name.
- **systemTag** (*boolean*) – Tag's systemTag.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_tag(*additional_info_attributes=None, additional_info_name_space=None, field=None, level=None, limit=None, name=None, offset=None, order=None, size=None, sort_by=None, system_tag=None, headers=None, **request_parameters*)

Returns the tags for given filter criteria .

Parameters

- **name** (*basestring*) – name query parameter. Tag name is mandatory when filter operation is used. .
- **additional_info_name_space** (*basestring*) – additionalInfo.nameSpace query parameter.
- **additional_info_attributes** (*basestring*) – additionalInfo.attributes query parameter.
- **level** (*basestring*) – level query parameter.
- **offset** (*basestring*) – offset query parameter.
- **limit** (*basestring*) – limit query parameter.
- **size** (*basestring*) – size query parameter. size in kilobytes(KB) .
- **field** (*basestring*) – field query parameter. Available field names are : 'name,id,parentId,type,additionalInfo.nameSpace,additionalInfo.attributes' .
- **sort_by** (*basestring*) – sortBy query parameter. Only supported attribute is name. SortyBy is mandatory when order is used. .
- **order** (*basestring*) – order query parameter. Available values are asc and des .
- **system_tag** (*basestring*) – systemTag query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_tag(*description=None, dynamicRules=None, id=None, instanceTenantId=None, name=None, systemTag=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Creates tag with specified tag attributes .

Parameters

- **description** (*string*) – Tag's description.
- **dynamicRules** (*list*) – Tag's dynamicRules (list of objects).

- **id** (*string*) – Tag’s id.
- **instanceTenantId** (*string*) – Tag’s instanceTenantId.
- **name** (*string*) – Tag’s name.
- **systemTag** (*boolean*) – Tag’s systemTag.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_count(*attribute_name=None, level=None, name=None, name_space=None, size=None, system_tag=None, headers=None, **request_parameters*)

Returns tag count .

Parameters

- **name** (*basestring*) – name query parameter.
- **name_space** (*basestring*) – nameSpace query parameter.
- **attribute_name** (*basestring*) – attributeName query parameter.
- **level** (*basestring*) – level query parameter.
- **size** (*basestring*) – size query parameter. size in kilobytes(KB) .
- **system_tag** (*basestring*) – systemTag query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

updates_tag_membership(*memberToTags=None, memberType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates tag membership. As part of the request payload through this API, only the specified members are added / retained to the given input tags. Possible values of memberType attribute in the request payload can be queried by using the /tag/member/type API .

Parameters

- **memberToTags** (*list*) – Tag's memberToTags (list of objects).
- **memberType** (*string*) – Tag's memberType.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_resource_types(*headers=None, **request_parameters*)

Returns list of supported resource types .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_tag(*id*, *headers=None*, ***request_parameters*)

Deletes a tag specified by id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_by_id(*id*, *headers=None*, ***request_parameters*)

Returns tag specified by Id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_members_by_id(*id*, *member_type*, *level=None*, *limit=None*, *member_association_type=None*, *offset=None*, *headers=None*, ***request_parameters*)

Returns tag members specified by id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **member_type** (*basestring*) – memberType query parameter. Entity type of the member. Possible values can be retrieved by using /tag/member/type API .

- **offset** (*basestring*) – offset query parameter. Used for pagination. It indicates the starting row number out of available member records .
- **limit** (*basestring*) – limit query parameter. Used to Number of maximum members to return in the result .
- **member_association_type** (*basestring*) – memberAssociationType query parameter. Indicates how the member is associated with the tag. Possible values and description. 1) DYNAMIC : The member is associated to the tag through rules. 2) STATIC – The member is associated to the tag manually. 3) MIXED – The member is associated manually and also satisfies the rule defined for the tag .
- **level** (*basestring*) – level query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_members_to_the_tag(*id*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Adds members to the tag specified by id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_member_count(*id*, *member_type*, *level=None*, *member_association_type=None*, *headers=None*,
***request_parameters*)

Returns the number of members in a given tag .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **member_type** (*basestring*) – memberType query parameter.
- **member_association_type** (*basestring*) – memberAssociationType query parameter.
- **level** (*basestring*) – level query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

remove_tag_member(*id*, *member_id*, *headers=None*, ***request_parameters*)

Removes Tag member from the tag specified by id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **member_id** (*basestring*) – memberId path parameter. TagMember id to be removed from tag .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

task

class Task

Cisco DNA Center Task API (version: 2.2.3.3).

Wraps the DNA Center Task API and exposes the API as native Python methods that return native Python objects.

get_business_api_execution_details(*execution_id*, *headers=None*, ***request_parameters*)

Retrieves the execution details of a Business API .

Parameters

- **execution_id** (*basestring*) – executionId path parameter. Execution Id of API .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tasks(*data=None*, *end_time=None*, *error_code=None*, *failure_reason=None*, *is_error=None*, *limit=None*, *offset=None*, *order=None*, *parent_id=None*, *progress=None*, *service_type=None*, *sort_by=None*, *start_time=None*, *username=None*, *headers=None*, ***request_parameters*)

Returns task(s) based on filter criteria .

Parameters

- **start_time** (*basestring*) – startTime query parameter. This is the epoch start time from which tasks need to be fetched .
- **end_time** (*basestring*) – endTime query parameter. This is the epoch end time upto which audit records need to be fetched .
- **data** (*basestring*) – data query parameter. Fetch tasks that contains this data .
- **error_code** (*basestring*) – errorCode query parameter. Fetch tasks that have this error code .
- **service_type** (*basestring*) – serviceType query parameter. Fetch tasks with this service type .
- **username** (*basestring*) – username query parameter. Fetch tasks with this username .
- **progress** (*basestring*) – progress query parameter. Fetch tasks that contains this progress .
- **is_error** (*basestring*) – isError query parameter. Fetch tasks ended as success or failure. Valid values: true, false .

- **failure_reason** (*basestring*) – failureReason query parameter. Fetch tasks that contains this failure reason .
- **parent_id** (*basestring*) – parentId query parameter. Fetch tasks that have this parent Id .
- **offset** (*basestring*) – offset query parameter.
- **limit** (*basestring*) – limit query parameter.
- **sort_by** (*basestring*) – sortBy query parameter. Sort results by this field .
- **order** (*basestring*) – order query parameter. Sort order asc or dsc .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_task_count(*data=None, end_time=None, error_code=None, failure_reason=None, is_error=None, parent_id=None, progress=None, service_type=None, start_time=None, username=None, headers=None, **request_parameters*)

Returns Task count .

Parameters

- **start_time** (*basestring*) – startTime query parameter. This is the epoch start time from which tasks need to be fetched .
- **end_time** (*basestring*) – endTime query parameter. This is the epoch end time upto which audit records need to be fetched .
- **data** (*basestring*) – data query parameter. Fetch tasks that contains this data .
- **error_code** (*basestring*) – errorCode query parameter. Fetch tasks that have this error code .
- **service_type** (*basestring*) – serviceType query parameter. Fetch tasks with this service type .
- **username** (*basestring*) – username query parameter. Fetch tasks with this username .
- **progress** (*basestring*) – progress query parameter. Fetch tasks that contains this progress .
- **is_error** (*basestring*) – isError query parameter. Fetch tasks ended as success or failure. Valid values: true, false .
- **failure_reason** (*basestring*) – failureReason query parameter. Fetch tasks that contains this failure reason .

- **parent_id** (*basestring*) – parentId query parameter. Fetch tasks that have this parent Id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_task_by_operationid(*limit, offset, operation_id, headers=None, **request_parameters*)

Returns root tasks associated with an Operationid .

Parameters

- **operation_id** (*basestring*) – operationId path parameter.
- **offset** (*int*) – offset path parameter. Index, minimum value is 0 .
- **limit** (*int*) – limit path parameter. The maximum value of {limit} supported is 500. Base 1 indexing for {limit}, minimum value is 1 .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_task_by_id(*task_id, headers=None, **request_parameters*)

Returns a task by specified id .

Parameters

- **task_id** (*basestring*) – taskId path parameter. UUID of the Task .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_task_tree(*task_id*, *headers=None*, ***request_parameters*)

Returns a task with its children tasks by based on their id .

Parameters

- **task_id** (*basestring*) – taskId path parameter. UUID of the Task .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

topology

class Topology

Cisco DNA Center Topology API (version: 2.2.3.3).

Wraps the DNA Center Topology API and exposes the API as native Python methods that return native Python objects.

get_overall_network_health(*timestamp=None*, *headers=None*, ***request_parameters*)

Returns Overall Network Health information by Device category (Access, Distribution, Core, Router, Wireless) for any given point of time .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the Network health data is required .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_topology_details(*vlan_id*, *headers=None*, ***request_parameters*)

Returns Layer 2 network topology by specified VLAN ID .

Parameters

- **vlan_id** (*basestring*) – vlanID path parameter. Vlan Name for e.g Vlan1, Vlan23 etc .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_l3_topology_details(*topology_type*, *headers=None*, ***request_parameters*)

Returns the Layer 3 network topology by routing protocol .

Parameters

- **topology_type** (*basestring*) – topologyType path parameter. Type of topology(OSPF,ISIS,etc) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_physical_topology(*node_type=None, headers=None, **request_parameters*)

Returns the raw physical topology by specified criteria of nodeType .

Parameters

- **node_type** (*basestring*) – nodeType query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site_topology(*headers=None, **request_parameters*)

Returns site topology .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_vlan_details(*headers=None, **request_parameters*)

Returns the list of VLAN names .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

users

class Users

Cisco DNA Center Users API (version: 2.2.3.3).

Wraps the DNA Center Users API and exposes the API as native Python methods that return native Python objects.

get_user_enrichment_details(*headers=None, **request_parameters*)

Enriches a given network End User context (a network user-id or end user's device Mac Address) with details about the user and devices that the user is connected to .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

wireless

class Wireless

Cisco DNA Center Wireless API (version: 2.2.3.3).

Wraps the DNA Center Wireless API and exposes the API as native Python methods that return native Python objects.

```
sensor_test_results(end_time=None, site_id=None, start_time=None, test_failure_by=None,  
                    headers=None, **request_parameters)
```

Intent API to get SENSOR test result summary .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Assurance site UUID .
- **start_time** (*int*) – startTime query parameter. The epoch time in milliseconds .
- **end_time** (*int*) – endTime query parameter. The epoch time in milliseconds .
- **test_failure_by** (*basestring*) – testFailureBy query parameter. Obtain failure statistics group by “area”, “building”, or “floor” .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_and_provision_ssid(enableFabric=None, flexConnect=None, managedAPLocations=None,  
                          ssidDetails=None, ssidType=None, headers=None, payload=None,  
                          active_validation=True, **request_parameters)
```

Creates SSID, updates the SSID to the corresponding site profiles and provision it to the devices matching the given sites .

Parameters

- **enableFabric** (*boolean*) – Wireless’s Enable SSID for Fabric .
- **flexConnect** (*object*) – Wireless’s flexConnect.
- **managedAPLocations** (*list*) – Wireless’s Managed AP Locations (Enter entire Site(s) hierarchy) (list of strings).
- **ssidDetails** (*object*) – Wireless’s ssidDetails.
- **ssidType** (*string*) – Wireless’s SSID Type . Available values are ‘Guest’ and ‘Enterprise’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_ssid_and_provision_it_to_devices(*managed_aplocations*, *ssid_name*, *headers=None*,
***request_parameters*)

Removes SSID or WLAN from the network profile, reprovision the device(s) and deletes the SSID or WLAN from DNA Center .

Parameters

- **ssid_name** (*basestring*) – ssidName path parameter.
- **managed_aplocations** (*basestring*) – managedAPLocations path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_enterprise_ssid(*ssid_name=None*, *headers=None*, ***request_parameters*)

Gets either one or all the enterprise SSID .

Parameters

- **ssid_name** (*basestring*) – ssidName query parameter. Enter the enterprise SSID name that needs to be retrieved. If not entered, all the enterprise SSIDs will be retrieved. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_enterprise_ssid(basicServiceSetClientIdleTimeout=None, clientExclusionTimeout=None,  
    enableBasicServiceSetMaxIdle=None, enableBroadcastSSID=None,  
    enableClientExclusion=None, enableDirectedMulticastService=None,  
    enableFastLane=None, enableMACFiltering=None, enableNeighborList=None,  
    enableSessionTimeOut=None, fastTransition=None, mfpClientProtection=None,  
    name=None, passphrase=None, radioPolicy=None, securityLevel=None,  
    sessionTimeOut=None, trafficType=None, headers=None, payload=None,  
    active_validation=True, **request_parameters)
```

Creates enterprise SSID .

Parameters

- **basicServiceSetClientIdleTimeout** (*integer*) – Wireless’s Basic Service Set Client Idle Timeout .
- **clientExclusionTimeout** (*integer*) – Wireless’s Client Exclusion Timeout .
- **enableBasicServiceSetMaxIdle** (*boolean*) – Wireless’s Enable Basic Service Set Max Idle .
- **enableBroadcastSSID** (*boolean*) – Wireless’s Enable Broadcast SSID .
- **enableClientExclusion** (*boolean*) – Wireless’s Enable Client Exclusion .
- **enableDirectedMulticastService** (*boolean*) – Wireless’s Enable Directed Multicast Service .
- **enableFastLane** (*boolean*) – Wireless’s Enable Fast Lane .
- **enableMACFiltering** (*boolean*) – Wireless’s Enable MAC Filtering .
- **enableNeighborList** (*boolean*) – Wireless’s Enable Neighbor List .
- **enableSessionTimeOut** (*boolean*) – Wireless’s Enable Session Timeout .
- **fastTransition** (*string*) – Wireless’s Fast Transition . Available values are ‘Adaptive’, ‘Enable’ and ‘Disable’.
- **mfpClientProtection** (*string*) – Wireless’s Management Frame Protection Client . Available values are ‘Optional’, ‘Disabled’ and ‘Required’.
- **name** (*string*) – Wireless’s Enter SSID Name .
- **passphrase** (*string*) – Wireless’s Pass Phrase (Only applicable for SSID with PERSONAL security level) .
- **radioPolicy** (*string*) – Wireless’s Radio Policy. Allowed values are ‘Dual band operation (2.4GHz and 5GHz)’, ‘Dual band operation with band select’, ‘5GHz only’, ‘2.4GHz only’ .
- **securityLevel** (*string*) – Wireless’s Security Level . Available values are ‘WPA2_ENTERPRISE’, ‘WPA2_PERSONAL’ and ‘OPEN’.
- **sessionTimeOut** (*integer*) – Wireless’s Session Time Out .
- **trafficType** (*string*) – Wireless’s Traffic Type . Available values are ‘voicedata’ and ‘data’.

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_enterprise_ssid(*basicServiceSetClientIdleTimeout=None, clientExclusionTimeout=None, enableBasicServiceSetMaxIdle=None, enableBroadcastSSID=None, enableClientExclusion=None, enableDirectedMulticastService=None, enableFastLane=None, enableMACFiltering=None, enableNeighborList=None, enableSessionTimeOut=None, fastTransition=None, mfpClientProtection=None, name=None, passphrase=None, radioPolicy=None, securityLevel=None, sessionTimeOut=None, trafficType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Update enterprise SSID .

Parameters

- **basicServiceSetClientIdleTimeout** (*integer*) – Wireless's Basic Service Set Client Idle Timeout .
- **clientExclusionTimeout** (*integer*) – Wireless's Client Exclusion Timeout .
- **enableBasicServiceSetMaxIdle** (*boolean*) – Wireless's Enable Basic Service Set Max Idle .
- **enableBroadcastSSID** (*boolean*) – Wireless's Enable Broadcast SSID .
- **enableClientExclusion** (*boolean*) – Wireless's Enable Client Exclusion .
- **enableDirectedMulticastService** (*boolean*) – Wireless's Enable Directed Multicast Service .
- **enableFastLane** (*boolean*) – Wireless's Enable Fast Lane .
- **enableMACFiltering** (*boolean*) – Wireless's Enable MAC Filtering .
- **enableNeighborList** (*boolean*) – Wireless's Enable Neighbor List .
- **enableSessionTimeOut** (*boolean*) – Wireless's Enable Session Timeout .
- **fastTransition** (*string*) – Wireless's Fast Transition . Available values are 'Adaptive', 'Enable' and 'Disable'.
- **mfpClientProtection** (*string*) – Wireless's Management Frame Protection Client . Available values are 'Optional', 'Disabled' and 'Required'.
- **name** (*string*) – Wireless's Enter SSID Name .

- **passphrase** (*string*) – Wireless’s Pass Phrase (Only applicable for SSID with PERSONAL security level) .
- **radioPolicy** (*string*) – Wireless’s Radio Policy. Allowed values are ‘Dual band operation (2.4GHz and 5GHz)’, ‘Dual band operation with band select’, ‘5GHz only’, ‘2.4GHz only’ .
- **securityLevel** (*string*) – Wireless’s Security Level . Available values are ‘WPA2_ENTERPRISE’, ‘WPA2_PERSONAL’ and ‘OPEN’.
- **sessionTimeOut** (*integer*) – Wireless’s Session Time Out .
- **trafficType** (*string*) – Wireless’s Traffic Type . Available values are ‘voicedata’ and ‘data’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_enterprise_ssid(*ssid_name*, *headers=None*, ***request_parameters*)

Deletes given enterprise SSID .

Parameters

- **ssid_name** (*basestring*) – ssidName path parameter. Enter the SSID name to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_wireless_profile(*wireless_profile_name*, *headers=None*, ***request_parameters*)

Delete the Wireless Profile from DNAC whose name is provided. .

Parameters

- **wireless_profile_name** (*basestring*) – wirelessProfileName path parameter. Wireless Profile Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

ap_provision(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Access Point Provision and ReProvision .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_update_dynamic_interface(*interfaceName=None*, *vlanId=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

API to create or update an dynamic interface .

Parameters

- **interfaceName** (*string*) – Wireless's dynamic-interface name .
- **vlanId** (*number*) – Wireless's Vlan Id .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_dynamic_interface(*interface_name=None, headers=None, **request_parameters*)

Get one or all dynamic interface(s) .

Parameters

- **interface_name** (*basestring*) – interface-name query parameter. dynamic-interface name, if not specified all the existing dynamic interfaces will be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_dynamic_interface(*interface_name, headers=None, **request_parameters*)

Delete a dynamic interface .

Parameters

- **interface_name** (*basestring*) – interfaceName path parameter. valid interface-name to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_wireless_profile(*profileDetails=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates the wireless Network Profile with updated details provided. All sites to be present in the network profile should be provided. .

Parameters

- **profileDetails** (*object*) – Wireless's profileDetails.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_wireless_profile(*profileDetails=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Creates Wireless Network Profile on DNAC and associates sites and SSIDs to it. .

Parameters

- **profileDetails** (*object*) – Wireless's profileDetails.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_wireless_profile(*profile_name=None, headers=None, **request_parameters*)

Gets either one or all the wireless network profiles if no name is provided for network-profile. .

Parameters

- **profile_name** (*basestring*) – profileName query parameter. Wireless Network Profile Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

provision_update(*headers=None, payload=None, active_validation=True, **request_parameters*)

Updates wireless provisioning .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

provision(*headers=None, payload=None, active_validation=True, **request_parameters*)

Provision wireless devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

psk_override(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update/override pass phrase of enterprise SSID .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

retrieve_rf_profiles(*rf_profile_name=None, headers=None, **request_parameters*)

Retrieve all RF profiles .

Parameters

- **rf_profile_name** (*basestring*) – rf-profile-name query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_or_update_rf_profile(*channelWidth=None, defaultRfProfile=None, enableBrownField=None, enableCustom=None, enableRadioTypeA=None, enableRadioTypeB=None, name=None, radioTypeAProperties=None, radioTypeBProperties=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Create or Update RF profile .

Parameters

- **channelWidth** (*string*) – Wireless's rf-profile channel width .
- **defaultRfProfile** (*boolean*) – Wireless's isDefault rf-profile .
- **enableBrownField** (*boolean*) – Wireless's true if enable brown field for rf-profile else false .
- **enableCustom** (*boolean*) – Wireless's true if enable custom rf-profile else false .
- **enableRadioTypeA** (*boolean*) – Wireless's tru if Enable Radio Type A else false .
- **enableRadioTypeB** (*boolean*) – Wireless's true if Enable Radio Type B else false .
- **name** (*string*) – Wireless's custom RF profile name .
- **radioTypeAProperties** (*object*) – Wireless's radioTypeAProperties.
- **radioTypeBProperties** (*object*) – Wireless's radioTypeBProperties.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_rf_profiles(*rf_profile_name*, *headers=None*, ***request_parameters*)

Delete RF profile(s) .

Parameters

- **rf_profile_name** (*basestring*) – rfProfileName path parameter. RF profile name to be deleted(required) non- custom RF profile cannot be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

DNACenterAPI v2.3.3.0**application_policy****class ApplicationPolicy**

Cisco DNA Center Application Policy API (version: 2.3.3.0).

Wraps the DNA Center Application Policy API and exposes the API as native Python methods that return native Python objects.

get_application_policy(*policy_scope=None*, *headers=None*, ***request_parameters*)

Get all existing application policies .

Parameters

- **policy_scope** (*basestring*) – policyScope query parameter. policy scope name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_application_policy_default(*headers=None, **request_parameters*)

Get default application policy .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

application_policy_intent(*createList=None, deleteList=None, updateList=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Create/Update/Delete application policy .

Parameters

- **createList** (*list*) – Application Policy's createList (list of objects).
- **deleteList** (*list*) – Application Policy's Delete list of Group Based Policy ids (list of strings).
- **updateList** (*list*) – Application Policy's updateList (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_application_policy_queuing_profile(*name=None, headers=None, **request_parameters*)

Get all or by name, existing application policy queuing profiles .

Parameters

- **name** (*basestring*) – name query parameter. queuing profile name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_application_policy_queuing_profile(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update existing custom application queuing profile .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_application_policy_queuing_profile(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create new custom application queuing profile .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_application_policy_queuing_profile_count(*headers=None, **request_parameters*)

Get the number of all existing application policy queuing profile .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_application_policy_queuing_profile(*id, headers=None, **request_parameters*)

Delete existing custom application policy queuing profile by id .

Parameters

- **id** (*basestring*) – id path parameter. Id of custom queuing profile to delete .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_application_sets(*limit=None, name=None, offset=None, headers=None, **request_parameters*)

Get application-sets by offset/limit or by name .

Parameters

- **offset** (*basestring*, *int*) – offset query parameter.
- **limit** (*basestring*, *int*) – limit query parameter.
- **name** (*basestring*) – name query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_application_set(*id, headers=None, **request_parameters*)

Delete existing application-set by it's id .

Parameters

- **id** (*basestring*) – id query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_application_set(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create new custom application-set/s .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_application_sets_count(*headers=None, **request_parameters*)

Get the number of existing application-sets .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_application(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create new Custom application .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

edit_application(*headers=None, payload=None, active_validation=True, **request_parameters*)

Edit the attributes of an existing application .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_application(*id, headers=None, **request_parameters*)

Delete existing application by its id .

Parameters

- **id** (*basestring*) – id query parameter. Application's Id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_applications(*limit=None, name=None, offset=None, headers=None, **request_parameters*)

Get applications by offset/limit or by name .

Parameters

- **offset** (*basestring, int*) – offset query parameter. The offset of the first application to be returned .
- **limit** (*basestring, int*) – limit query parameter. The maximum number of applications to be returned .
- **name** (*basestring*) – name query parameter. Application's name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_applications_count(*headers=None, **request_parameters*)

Get the number of all existing applications .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_qos_device_interface_info(*network_device_id=None, headers=None, **request_parameters*)

Get all or by network device id, existing qos device interface infos .

Parameters

- **network_device_id** (*basestring*) – networkDeviceId query parameter. network device id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_qos_device_interface_info(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update existing qos device interface infos associate with network device id .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

create_qos_device_interface_info(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create qos device interface infos associate with network device id to allow the user to mark specific interfaces as WAN, to associate WAN interfaces with specific SP Profile and to be able to define a shaper on WAN interfaces .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_qos_device_interface_info_count(*headers=None, **request_parameters*)

Get the number of all existing qos device interface infos group by network device id .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_qos_device_interface_info(*id, headers=None, **request_parameters*)

Delete all qos device interface infos associate with network device id .

Parameters

- **id** (*basestring*) – id path parameter. Id of the qos device info, this object holds all qos device interface infos associate with network device id .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

applications

class Applications

Cisco DNA Center Applications API (version: 2.3.3.0).

Wraps the DNA Center Applications API and exposes the API as native Python methods that return native Python objects.

applications(*application_health=None, application_name=None, device_id=None, end_time=None, limit=None, mac_address=None, offset=None, site_id=None, start_time=None, headers=None, **request_parameters*)

Intent API to get a list of applications for a specific site, a device, or a client device's MAC address. For a combination of a specific application with site and/or device the API gets list of issues/devices/endpoints. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Assurance site UUID value (Cannot be submitted together with deviceId and clientMac) .
- **device_id** (*basestring*) – deviceId query parameter. Assurance device UUID value (Cannot be submitted together with siteId and clientMac) .
- **mac_address** (*basestring*) – macAddress query parameter. Client device's MAC address (Cannot be submitted together with siteId and deviceId) .
- **start_time** (*int*) – startTime query parameter. Starting epoch time in milliseconds of time window .
- **end_time** (*int*) – endTime query parameter. Ending epoch time in milliseconds of time window .
- **application_health** (*basestring*) – applicationHealth query parameter. Application health category (POOR, FAIR, or GOOD. Optionally use with siteId only) .
- **offset** (*basestring, int*) – offset query parameter. The offset of the first application in the returned data (optionally used with siteId only) .
- **limit** (*basestring, int*) – limit query parameter. The max number of application entries in returned data [1, 1000] (optionally used with siteId only) .
- **application_name** (*basestring*) – applicationName query parameter. The name of the application to get information on .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

cisco_dna_center_system**class CiscoDnaCenterSystem**

Cisco DNA Center Cisco DNA Center System API (version: 2.3.3.0).

Wraps the DNA Center Cisco DNA Center System API and exposes the API as native Python methods that return native Python objects.

authorize_device(*deviceIdList=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Authorizes one or more devices. A device can only be authorized if Authorization is set in Device Settings.

.

Parameters

- **deviceIdList** (*list*) – Cisco DNA Center System's Device Id List (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

clients

class Clients

Cisco DNA Center Clients API (version: 2.3.3.0).

Wraps the DNA Center Clients API and exposes the API as native Python methods that return native Python objects.

get_client_detail(*mac_address*, *timestamp=None*, *headers=None*, ***request_parameters*)

Returns detailed Client information retrieved by Mac Address for any given point of time. .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the Client health data is required .
- **mac_address** (*basestring*) – macAddress query parameter. MAC Address of the client .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_client_enrichment_details(*headers=None*, ***request_parameters*)

Enriches a given network End User context (a network user-id or end user's device Mac Address) with details about the user, the devices that the user is connected to and the assurance issues that the user is impacted by .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_overall_client_health(*timestamp=None, headers=None, **request_parameters*)

Returns Overall Client Health information by Client type (Wired and Wireless) for any given point of time .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the Client health data is required .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

client_proximity(*username, number_days=None, time_resolution=None, headers=None, **request_parameters*)

This intent API will provide client proximity information for a specific wireless user. Proximity is defined as presence on the same floor at the same time as the specified wireless user. The Proximity workflow requires the subscription to the following event (via the Event Notification workflow) prior to making this API call: NETWORK-CLIENTS-3-506 Client Proximity Report. .

Parameters

- **username** (*basestring*) – username query parameter. Wireless client username for which proximity information is required .
- **number_days** (*int*) – number_days query parameter. Number of days to track proximity until current date. Defaults and maximum up to 14 days. .
- **time_resolution** (*int*) – time_resolution query parameter. Time interval (in minutes) to measure proximity. Defaults to 15 minutes with a minimum 5 minutes. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- *MalformedRequest* – If the request body created is invalid.
- *ApiError* – If the DNA Center cloud returns an error.

command_runner

class CommandRunner

Cisco DNA Center Command Runner API (version: 2.3.3.0).

Wraps the DNA Center Command Runner API and exposes the API as native Python methods that return native Python objects.

get_all_keywords_of_clis_accepted(*headers=None, **request_parameters*)

Get valid keywords .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- *TypeError* – If the parameter types are incorrect.
- *MalformedRequest* – If the request body created is invalid.
- *ApiError* – If the DNA Center cloud returns an error.

run_read_only_commands_on_devices(*commands=None, description=None, deviceUuids=None, name=None, timeout=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Submit request for read-only CLIs .

Parameters

- **commands** (*list*) – Command Runner's commands (list of strings).
- **description** (*string*) – Command Runner's description.
- **deviceUuids** (*list*) – Command Runner's deviceUuids (list of strings).
- **name** (*string*) – Command Runner's name.
- **timeout** (*integer*) – Command Runner's timeout.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

compliance

class Compliance

Cisco DNA Center Compliance API (version: 2.3.3.0).

Wraps the DNA Center Compliance API and exposes the API as native Python methods that return native Python objects.

get_compliance_status(*compliance_status=None, device_uuid=None, limit=None, offset=None, headers=None, **request_parameters*)

Return compliance status of device(s). .

Parameters

- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can be have value among 'COMPLIANT', 'NON_COMPLIANT', 'IN_PROGRESS', 'ERROR' .
- **device_uuid** (*basestring*) – deviceUuid query parameter. Comma separated deviceU-uids .
- **offset** (*basestring, int*) – offset query parameter. offset/starting row .
- **limit** (*basestring, int*) – limit query parameter. Number of records to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_compliance_status(*compliance_status=None, device_uuid=None, limit=None, offset=None, headers=None, **request_parameters*)

Return compliance status of device(s). .

Parameters

- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can be have value among ‘COMPLIANT’, ‘NON_COMPLIANT’, ‘IN_PROGRESS’, ‘ERROR’ .
- **device_uuid** (*basestring*) – deviceUuid query parameter. Comma separated deviceU-uids .
- **offset** (*basestring, int*) – offset query parameter. offset/starting row .
- **limit** (*basestring, int*) – limit query parameter. Number of records to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

run_compliance(*categories=None, deviceUuids=None, triggerFull=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Run compliance check for device(s). .

Parameters

- **categories** (*list*) – Compliance’s categories (list of strings).
- **deviceUuids** (*list*) – Compliance’s deviceUuids (list of strings).
- **triggerFull** (*boolean*) – Compliance’s triggerFull.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_compliance_status_count(*compliance_status=None, headers=None, **request_parameters*)

Return Compliance Status Count .

Parameters

- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can have value among 'COMPLIANT', 'NON_COMPLIANT', 'IN_PROGRESS', 'NOT_AVAILABLE', 'NOT_APPLICABLE', 'ERROR' .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_compliance_detail(*compliance_status=None, compliance_type=None, device_uuid=None, limit=None, offset=None, headers=None, **request_parameters*)

Return Compliance Detail .

Parameters

- **compliance_type** (*basestring*) – complianceType query parameter. complianceType can have any value among 'NETWORK_PROFILE', 'IMAGE', 'APPLICATION_VISIBILITY', 'FABRIC', 'PSIRT', 'RUNNING_CONFIG', 'WORKFLOW' .
- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can have value among 'COMPLIANT', 'NON_COMPLIANT', 'IN_PROGRESS', 'NOT_AVAILABLE', 'NOT_APPLICABLE', 'ERROR' .
- **device_uuid** (*basestring*) – deviceUuid query parameter. Comma separated deviceUuids .
- **offset** (*basestring, int*) – offset query parameter. offset/starting row .
- **limit** (*basestring, int*) – limit query parameter. Number of records to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_compliance_detail_count(*compliance_status=None, compliance_type=None, headers=None, **request_parameters*)

Return Compliance Count Detail .

Parameters

- **compliance_type** (*basestring*) – complianceType query parameter. complianceType can have any value among 'NETWORK_PROFILE', 'IMAGE', 'APPLICATION_VISIBILITY', 'FABRIC', 'PSIRT', 'RUNNING_CONFIG', 'WORKFLOW'..
- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can have value among 'COMPLIANT', 'NON_COMPLIANT', 'IN_PROGRESS', 'NOT_AVAILABLE', 'NOT_APPLICABLE', 'ERROR' .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_compliance_status(*device_uuid, headers=None, **request_parameters*)

Return compliance status of a device. .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

compliance_details_of_device(*device_uuid*, *category=None*, *compliance_type=None*, *diff_list=None*,
key=None, *value=None*, *headers=None*, ***request_parameters*)

Return compliance detailed report for a device. .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter.
- **category** (*basestring*) – category query parameter. complianceCategory can have any value among 'INTENT', 'RUNNING_CONFIG' .
- **compliance_type** (*basestring*) – complianceType query parameter. complianceType can have any value among 'NETWORK_DESIGN', 'NETWORK_PROFILE', 'FABRIC', 'POLICY', 'RUNNING_CONFIG' .
- **diff_list** (*bool*) – diffList query parameter. diff list [pass true to fetch the diff list] .
- **key** (*basestring*) – key query parameter. extended attribute key .
- **value** (*basestring*) – value query parameter. extended attribute value .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

configuration_archive

class ConfigurationArchive

Cisco DNA Center Configuration Archive API (version: 2.3.3.0).

Wraps the DNA Center Configuration Archive API and exposes the API as native Python methods that return native Python objects.

export_device_configurations(*deviceId=None*, *password=None*, *headers=None*, *payload=None*,
active_validation=True, ***request_parameters*)

Export Device configurations to an encrypted zip file. .

Parameters

- **deviceId** (*list*) – Configuration Archive's Device Id (list of strings).
- **password** (*string*) – Configuration Archive's Password.

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

configuration_templates

class ConfigurationTemplates

Cisco DNA Center Configuration Templates API (version: 2.3.3.0).

Wraps the DNA Center Configuration Templates API and exposes the API as native Python methods that return native Python objects.

clone_given_template(*name, project_id, template_id, headers=None, **request_parameters*)

API to clone template .

Parameters

- **name** (*basestring*) – name path parameter. Template name to clone template(Name should be different than existing template name within same project) .
- **template_id** (*basestring*) – templateId path parameter. UUID of the template to clone it .
- **project_id** (*basestring*) – projectId path parameter.
- **project_id** – projectId query parameter. UUID of the project in which the template needs to be created .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_project(*createTime=None, description=None, id=None, lastUpdateTime=None, name=None, tags=None, templates=None, headers=None, payload=None, active_validation=True, **request_parameters*)

This API is used to create a new project. .

Parameters

- **createTime** (*integer*) – Configuration Templates's Create time of project .
- **description** (*string*) – Configuration Templates's Description of project .
- **id** (*string*) – Configuration Templates's UUID of project .
- **lastUpdateTime** (*integer*) – Configuration Templates's Update time of project .
- **name** (*string*) – Configuration Templates's Name of project .
- **tags** (*list*) – Configuration Templates's tags (list of objects).
- **templates** (*list*) – Configuration Templates's List of templates within the project (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_project(*createTime=None, description=None, id=None, lastUpdateTime=None, name=None, tags=None, templates=None, headers=None, payload=None, active_validation=True, **request_parameters*)

This API is used to update an existing project. .

Parameters

- **createTime** (*integer*) – Configuration Templates's Create time of project .
- **description** (*string*) – Configuration Templates's Description of project .
- **id** (*string*) – Configuration Templates's UUID of project .
- **lastUpdateTime** (*integer*) – Configuration Templates's Update time of project .
- **name** (*string*) – Configuration Templates's Name of project .

- **tags** (*list*) – Configuration Templates’s tags (list of objects).
- **templates** (*list*) – Configuration Templates’s List of templates within the project (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_projects(*name=None, sort_order=None, headers=None, **request_parameters*)

List the projects .

Parameters

- **name** (*basestring*) – name query parameter. Name of project to be searched .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

imports_the_projects_provided(*do_version=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Imports the Projects provided in the DTO .

Parameters

- **do_version** (*bool*) – doVersion query parameter. If this flag is true then it creates a new version of the template with the imported contents in case if the templates already exists. ” If this flag is false and if template already exists, then operation fails with ‘Template already exists’ error .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** ((*list*, *dict*)) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

export_projects(*headers=None, payload=None, active_validation=True, **request_parameters*)

Exports the projects for given projectNames. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

imports_the_templates_provided(*project_name, do_version=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Imports the templates provided in the DTO by project Name .

Parameters

- **project_name** (*basestring*) – projectName path parameter. Project name to create template under the project .
- **do_version** (*bool*) – doVersion query parameter. If this flag is true then it creates a new version of the template with the imported contents in case if the templates already exists. ” If this flag is false and if template already exists, then operation fails with ‘Template already exists’ error .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_project_details(*project_id*, *headers=None*, ***request_parameters*)

Get the details of the given project by its id. .

Parameters

- **project_id** (*basestring*) – projectId path parameter. projectId(UUID) of project to get project details .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deletes_the_project(*project_id*, *headers=None*, ***request_parameters*)

Deletes the project by its id .

Parameters

- **project_id** (*basestring*) – projectId path parameter. projectId(UUID) of project to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_template(*project_id*, *author=None*, *composite=None*, *containingTemplates=None*, *createTime=None*, *customParamsOrder=None*, *description=None*, *deviceTypes=None*, *failurePolicy=None*, *id=None*, *language=None*, *lastUpdateTime=None*, *latestVersionTime=None*, *name=None*, *parentTemplateId=None*, *projectId=None*, *projectName=None*, *rollbackTemplateContent=None*, *rollbackTemplateParams=None*, *softwareType=None*, *softwareVariant=None*, *softwareVersion=None*, *tags=None*, *templateContent=None*, *templateParams=None*, *validationErrors=None*, *version=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

API to create a template by project id. .

Parameters

- **author** (*string*) – Configuration Templates's Author of template .
- **composite** (*boolean*) – Configuration Templates's Is it composite template .
- **containingTemplates** (*list*) – Configuration Templates's containingTemplates (list of objects).
- **createTime** (*integer*) – Configuration Templates's Create time of template .
- **customParamsOrder** (*boolean*) – Configuration Templates's Custom Params Order .
- **description** (*string*) – Configuration Templates's Description of template .
- **deviceTypes** (*list*) – Configuration Templates's deviceTypes (list of objects).
- **failurePolicy** (*string*) – Configuration Templates's Define failure policy if template provisioning fails . Available values are 'ABORT_ON_ERROR', 'CONTINUE_ON_ERROR', 'ROLLBACK_ON_ERROR', 'ROLLBACK_TARGET_ON_ERROR' and 'ABORT_TARGET_ON_ERROR'.
- **id** (*string*) – Configuration Templates's UUID of template .
- **language** (*string*) – Configuration Templates's Template language (JINJA or VELOCITY) .
- **lastUpdateTime** (*integer*) – Configuration Templates's Update time of template .
- **latestVersionTime** (*integer*) – Configuration Templates's Latest versioned template time .

- **name** (*string*) – Configuration Templates’s Name of template .
- **parentTemplateId** (*string*) – Configuration Templates’s Parent templateID .
- **projectId** (*string*) – Configuration Templates’s Project UUID .
- **projectName** (*string*) – Configuration Templates’s Project name .
- **rollbackTemplateContent** (*string*) – Configuration Templates’s Rollback template content .
- **rollbackTemplateParams** (*list*) – Configuration Templates’s rollbackTemplateParams (list of objects).
- **softwareType** (*string*) – Configuration Templates’s Applicable device software type .
- **softwareVariant** (*string*) – Configuration Templates’s Applicable device software variant .
- **softwareVersion** (*string*) – Configuration Templates’s Applicable device software version .
- **tags** (*list*) – Configuration Templates’s tags (list of objects).
- **templateContent** (*string*) – Configuration Templates’s Template content .
- **templateParams** (*list*) – Configuration Templates’s templateParams (list of objects).
- **validationErrors** (*object*) – Configuration Templates’s validationErrors.
- **version** (*string*) – Configuration Templates’s Current version of template .
- **project_id** (*basestring*) – projectId path parameter. UUID of the project in which the template needs to be created .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
gets_the_templates_available(filter_conflicting_templates=None, product_family=None,
                             product_series=None, product_type=None, project_id=None,
                             project_names=None, software_type=None, software_version=None,
                             sort_order=None, tags=None, un_committed=None, headers=None,
                             **request_parameters)
```

List the templates available .

Parameters

- **project_id** (*basestring*) – projectId query parameter. Filter template(s) based on project UUID .
- **software_type** (*basestring*) – softwareType query parameter. Filter template(s) based on software type .
- **software_version** (*basestring*) – softwareVersion query parameter. Filter template(s) based on softwareVersion .
- **product_family** (*basestring*) – productFamily query parameter. Filter template(s) based on device family .
- **product_series** (*basestring*) – productSeries query parameter. Filter template(s) based on device series .
- **product_type** (*basestring*) – productType query parameter. Filter template(s) based on device type .
- **filter_conflicting_templates** (*bool*) – filterConflictingTemplates query parameter. Filter template(s) based on conflicting templates .
- **tags** (*basestring*, *list*, *set*, *tuple*) – tags query parameter. Filter template(s) based on tags .
- **project_names** (*basestring*, *list*, *set*, *tuple*) – projectNames query parameter. Filter template(s) based on project names .
- **un_committed** (*bool*) – unCommitted query parameter. Filter template(s) based on template committed or not .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_template(*author=None, composite=None, containingTemplates=None, createTime=None, customParamsOrder=None, description=None, deviceTypes=None, failurePolicy=None, id=None, language=None, lastUpdateTime=None, latestVersionTime=None, name=None, parentTemplateId=None, projectId=None, projectName=None, rollbackTemplateContent=None, rollbackTemplateParams=None, softwareType=None, softwareVariant=None, softwareVersion=None, tags=None, templateContent=None, templateParams=None, validationErrors=None, version=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to update a template. .

Parameters

- **author** (*string*) – Configuration Templates’s Author of template .
- **composite** (*boolean*) – Configuration Templates’s Is it composite template .
- **containingTemplates** (*list*) – Configuration Templates’s containingTemplates (list of objects).
- **createTime** (*integer*) – Configuration Templates’s Create time of template .
- **customParamsOrder** (*boolean*) – Configuration Templates’s Custom Params Order .
- **description** (*string*) – Configuration Templates’s Description of template .
- **deviceTypes** (*list*) – Configuration Templates’s deviceTypes (list of objects).
- **failurePolicy** (*string*) – Configuration Templates’s Define failure policy if template provisioning fails . Available values are ‘ABORT_ON_ERROR’, ‘CONTINUE_ON_ERROR’, ‘ROLLBACK_ON_ERROR’, ‘ROLLBACK_TARGET_ON_ERROR’ and ‘ABORT_TARGET_ON_ERROR’.
- **id** (*string*) – Configuration Templates’s UUID of template .
- **language** (*string*) – Configuration Templates’s Template language (JINJA or VELOCITY) .
- **lastUpdateTime** (*integer*) – Configuration Templates’s Update time of template .
- **latestVersionTime** (*integer*) – Configuration Templates’s Latest versioned template time .
- **name** (*string*) – Configuration Templates’s Name of template .
- **parentTemplateId** (*string*) – Configuration Templates’s Parent templateID .
- **projectId** (*string*) – Configuration Templates’s Project UUID .
- **projectName** (*string*) – Configuration Templates’s Project name .
- **rollbackTemplateContent** (*string*) – Configuration Templates’s Rollback template content .
- **rollbackTemplateParams** (*list*) – Configuration Templates’s rollbackTemplateParams (list of objects).
- **softwareType** (*string*) – Configuration Templates’s Applicable device software type .
- **softwareVariant** (*string*) – Configuration Templates’s Applicable device software variant .
- **softwareVersion** (*string*) – Configuration Templates’s Applicable device software version .
- **tags** (*list*) – Configuration Templates’s tags (list of objects).
- **templateContent** (*string*) – Configuration Templates’s Template content .
- **templateParams** (*list*) – Configuration Templates’s templateParams (list of objects).
- **validationErrors** (*object*) – Configuration Templates’s validationErrors.
- **version** (*string*) – Configuration Templates’s Current version of template .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deploy_template(*forcePushTemplate=None, isComposite=None, mainTemplateId=None, memberTemplateDeploymentInfo=None, targetInfo=None, templateId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to deploy a template. .

Parameters

- **forcePushTemplate** (*boolean*) – Configuration Templates's forcePushTemplate.
- **isComposite** (*boolean*) – Configuration Templates's Composite template flag .
- **mainTemplateId** (*string*) – Configuration Templates's Main template UUID of versioned template .
- **memberTemplateDeploymentInfo** (*list*) – Configuration Templates's memberTemplateDeploymentInfo (list of objects).
- **targetInfo** (*list*) – Configuration Templates's targetInfo (list of objects).
- **templateId** (*string*) – Configuration Templates's UUID of template to be provisioned .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_template_deployment_status(*deployment_id*, *headers=None*, ***request_parameters*)

API to retrieve the status of template deployment. .

Parameters

- **deployment_id** (*basestring*) – deploymentId path parameter. UUID of deployment to retrieve template deployment status .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

export_templates(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Exports the templates for given templateIds. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

preview_template(*deviceId=None*, *params=None*, *resourceParams=None*, *templateId=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

API to preview a template. .

Parameters

- **deviceId** (*string*) – Configuration Templates's UUID of device to get template preview .

- **params** (*object*) – Configuration Templates’s Params to render preview .
- **resourceParams** (*list*) – Configuration Templates’s Resource params to render preview (list of objects).
- **templateId** (*string*) – Configuration Templates’s UUID of template to get template preview .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

version_template(*comments=None, templateId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to version the current contents of the template. .

Parameters

- **comments** (*string*) – Configuration Templates’s Template version comments .
- **templateId** (*string*) – Configuration Templates’s UUID of template .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_template_versions(*template_id*, *headers=None*, ***request_parameters*)

Get all the versions of template by its id .

Parameters

- **template_id** (*basestring*) – templateId path parameter. templateId(UUID) to get list of versioned templates .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deletes_the_template(*template_id*, *headers=None*, ***request_parameters*)

Deletes the template by its id .

Parameters

- **template_id** (*basestring*) – templateId path parameter. templateId(UUID) of template to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_template_details(*template_id*, *latest_version=None*, *headers=None*, ***request_parameters*)

Details of the template by its id .

Parameters

- **template_id** (*basestring*) – templateId path parameter. TemplateId(UUID) to get details of the template .
- **latest_version** (*bool*) – latestVersion query parameter. latestVersion flag to get the latest versioned template .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_projects_details(*id=None, limit=None, name=None, offset=None, sort_order=None, headers=None, **request_parameters*)

Get project(s) details .

Parameters

- **id** (*basestring*) – id query parameter. Id of project to be searched .
- **name** (*basestring*) – name query parameter. Name of project to be searched .
- **offset** (*basestring, int*) – offset query parameter. Index of first result .
- **limit** (*basestring, int*) – limit query parameter. Limits number of results .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (dsc) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_templates_details(*all_template_attributes=None, filter_conflicting_templates=None, id=None, include_version_details=None, limit=None, name=None, offset=None, product_family=None, product_series=None, product_type=None, project_id=None, project_name=None, software_type=None, software_version=None, sort_order=None, tags=None, un_committed=None, headers=None, **request_parameters*)

Get template(s) details .

Parameters

- **id** (*basestring*) – id query parameter. Id of template to be searched .
- **name** (*basestring*) – name query parameter. Name of template to be searched .
- **project_id** (*basestring*) – projectId query parameter. Filter template(s) based on project id .
- **project_name** (*basestring*) – projectName query parameter. Filter template(s) based on project name .
- **software_type** (*basestring*) – softwareType query parameter. Filter template(s) based software type .
- **software_version** (*basestring*) – softwareVersion query parameter. Filter template(s) based softwareVersion .
- **product_family** (*basestring*) – productFamily query parameter. Filter template(s) based on device family .
- **product_series** (*basestring*) – productSeries query parameter. Filter template(s) based on device series .
- **product_type** (*basestring*) – productType query parameter. Filter template(s) based on device type .
- **filter_conflicting_templates** (*bool*) – filterConflictingTemplates query parameter. Filter template(s) based on confliting templates .
- **tags** (*basestring*, *list*, *set*, *tuple*) – tags query parameter. Filter template(s) based on tags .
- **un_committed** (*bool*) – unCommitted query parameter. Return uncommitted template .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (dsc) .
- **all_template_attributes** (*bool*) – allTemplateAttributes query parameter. Return all template attributes .
- **include_version_details** (*bool*) – includeVersionDetails query parameter. Include template version details .
- **offset** (*basestring*, *int*) – offset query parameter. Index of first result .
- **limit** (*basestring*, *int*) – limit query parameter. Limits number of results .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

deploy_template_v2(*forcePushTemplate=None, isComposite=None, mainTemplateId=None, memberTemplateDeploymentInfo=None, targetInfo=None, templateId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

V2 API to deploy a template. .

Parameters

- **forcePushTemplate** (*boolean*) – Configuration Templates's forcePushTemplate.
- **isComposite** (*boolean*) – Configuration Templates's Composite template flag .
- **mainTemplateId** (*string*) – Configuration Templates's Main template UUID of versioned template .
- **memberTemplateDeploymentInfo** (*list*) – Configuration Templates's memberTemplateDeploymentInfo (list of objects).
- **targetInfo** (*list*) – Configuration Templates's targetInfo (list of objects).
- **templateId** (*string*) – Configuration Templates's UUID of template to be provisioned .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_onboarding_pnp

class DeviceOnboardingPnp

Cisco DNA Center Device Onboarding (PnP) API (version: 2.3.3.0).

Wraps the DNA Center Device Onboarding (PnP) API and exposes the API as native Python methods that return native Python objects.

add_device(*_id=None, deviceInfo=None, runSummaryList=None, systemResetWorkflow=None, systemWorkflow=None, tenantId=None, version=None, workflow=None, workflowParameters=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Adds a device to the PnP database. .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)’s _id.
- **deviceInfo** (*object*) – Device Onboarding (PnP)’s deviceInfo.
- **runSummaryList** (*list*) – Device Onboarding (PnP)’s runSummaryList (list of objects).
- **systemResetWorkflow** (*object*) – Device Onboarding (PnP)’s systemResetWorkflow.
- **systemWorkflow** (*object*) – Device Onboarding (PnP)’s systemWorkflow.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **version** (*integer*) – Device Onboarding (PnP)’s version.
- **workflow** (*object*) – Device Onboarding (PnP)’s workflow.
- **workflowParameters** (*object*) – Device Onboarding (PnP)’s workflowParameters.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_list(*cm_state=None, hostname=None, last_contact=None, limit=None, mac_address=None, name=None, offset=None, onb_state=None, pid=None, project_id=None, project_name=None, serial_number=None, site_name=None, smart_account_id=None, sort=None, sort_order=None, source=None, state=None, virtual_account_id=None, workflow_id=None, workflow_name=None, headers=None, **request_parameters*)

Returns list of devices based on filter criteria. If a limit is not specified, it will default to return 50 devices. Pagination and sorting are also supported by this endpoint .

Parameters

- **limit** (*basestring, int*) – limit query parameter. Limits number of results .
- **offset** (*basestring, int*) – offset query parameter. Index of first result .
- **sort** (*basestring, list, set, tuple*) – sort query parameter. Comma seperated list of fields to sort on .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **serial_number** (*basestring, list, set, tuple*) – serialNumber query parameter. Device Serial Number .
- **state** (*basestring, list, set, tuple*) – state query parameter. Device State .

- **onb_state** (*basestring*, *list*, *set*, *tuple*) – onbState query parameter. Device Onboarding State .
- **cm_state** (*basestring*, *list*, *set*, *tuple*) – cmState query parameter. Device Connection Manager State .
- **name** (*basestring*, *list*, *set*, *tuple*) – name query parameter. Device Name .
- **pid** (*basestring*, *list*, *set*, *tuple*) – pid query parameter. Device ProductId .
- **source** (*basestring*, *list*, *set*, *tuple*) – source query parameter. Device Source .
- **project_id** (*basestring*, *list*, *set*, *tuple*) – projectId query parameter. Device Project Id .
- **workflow_id** (*basestring*, *list*, *set*, *tuple*) – workflowId query parameter. Device Workflow Id .
- **project_name** (*basestring*, *list*, *set*, *tuple*) – projectName query parameter. Device Project Name .
- **workflow_name** (*basestring*, *list*, *set*, *tuple*) – workflowName query parameter. Device Workflow Name .
- **smart_account_id** (*basestring*, *list*, *set*, *tuple*) – smartAccountId query parameter. Device Smart Account .
- **virtual_account_id** (*basestring*, *list*, *set*, *tuple*) – virtualAccountId query parameter. Device Virtual Account .
- **last_contact** (*bool*) – lastContact query parameter. Device Has Contacted lastContact > 0 .
- **mac_address** (*basestring*) – macAddress query parameter. Device Mac Address .
- **hostname** (*basestring*) – hostname query parameter. Device Hostname .
- **site_name** (*basestring*) – siteName query parameter. Device Site Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

claim_device(*configFileUrl=None*, *configId=None*, *deviceClaimList=None*, *fileServiceId=None*, *imageId=None*, *imageUrl=None*, *populateInventory=None*, *projectId=None*, *workflowId=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Claims one of more devices with specified workflow .

Parameters

- **configFileUrl** (*string*) – Device Onboarding (PnP)’s configFileUrl.
- **configId** (*string*) – Device Onboarding (PnP)’s configId.
- **deviceClaimList** (*list*) – Device Onboarding (PnP)’s deviceClaimList (list of objects).
- **fileServiceId** (*string*) – Device Onboarding (PnP)’s fileServiceId.
- **imageId** (*string*) – Device Onboarding (PnP)’s imageId.
- **imageUrl** (*string*) – Device Onboarding (PnP)’s imageUrl.
- **populateInventory** (*boolean*) – Device Onboarding (PnP)’s populateInventory.
- **projectId** (*string*) – Device Onboarding (PnP)’s projectId.
- **workflowId** (*string*) – Device Onboarding (PnP)’s workflowId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_count (*cm_state=None, last_contact=None, name=None, onb_state=None, pid=None, project_id=None, project_name=None, serial_number=None, smart_account_id=None, source=None, state=None, virtual_account_id=None, workflow_id=None, workflow_name=None, headers=None, **request_parameters*)

Returns the device count based on filter criteria. This is useful for pagination .

Parameters

- **serial_number** (*basestring, list, set, tuple*) – serialNumber query parameter. Device Serial Number .
- **state** (*basestring, list, set, tuple*) – state query parameter. Device State .
- **onb_state** (*basestring, list, set, tuple*) – onbState query parameter. Device Onboarding State .
- **cm_state** (*basestring, list, set, tuple*) – cmState query parameter. Device Connection Manager State .
- **name** (*basestring, list, set, tuple*) – name query parameter. Device Name .
- **pid** (*basestring, list, set, tuple*) – pid query parameter. Device ProductId .

- **source** (*basestring*, *list*, *set*, *tuple*) – source query parameter. Device Source .
- **project_id** (*basestring*, *list*, *set*, *tuple*) – projectId query parameter. Device Project Id .
- **workflow_id** (*basestring*, *list*, *set*, *tuple*) – workflowId query parameter. Device Workflow Id .
- **project_name** (*basestring*, *list*, *set*, *tuple*) – projectName query parameter. Device Project Name .
- **workflow_name** (*basestring*, *list*, *set*, *tuple*) – workflowName query parameter. Device Workflow Name .
- **smart_account_id** (*basestring*, *list*, *set*, *tuple*) – smartAccountId query parameter. Device Smart Account .
- **virtual_account_id** (*basestring*, *list*, *set*, *tuple*) – virtualAccountId query parameter. Device Virtual Account .
- **last_contact** (*bool*) – lastContact query parameter. Device Has Contacted lastContact > 0 .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_history(*serial_number*, *sort=None*, *sort_order=None*, *headers=None*, ***request_parameters*)

Returns history for a specific device. Serial number is a required parameter .

Parameters

- **serial_number** (*basestring*) – serialNumber query parameter. Device Serial Number .
- **sort** (*basestring*, *list*, *set*, *tuple*) – sort query parameter. Comma seperated list of fields to sort on .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

import_devices_in_bulk(*headers=None, payload=None, active_validation=True, **request_parameters*)

Add devices to PnP in bulk .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

reset_device(*deviceResetList=None, projectId=None, workflowId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Recovers a device from a Workflow Execution Error state .

Parameters

- **deviceResetList** (*list*) – Device Onboarding (PnP)'s deviceResetList (list of objects).
- **projectId** (*string*) – Device Onboarding (PnP)'s projectId.
- **workflowId** (*string*) – Device Onboarding (PnP)'s workflowId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_sync_result_for_virtual_account(*domain, name, headers=None, **request_parameters*)

Returns the summary of devices synced from the given smart account & virtual account with PnP .

Parameters

- **domain** (*basestring*) – domain path parameter. Smart Account Domain .
- **name** (*basestring*) – name path parameter. Virtual Account Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

claim_a_device_to_a_site(*configInfo=None, deviceId=None, gateway=None, imageInfo=None, ipInterfaceName=None, rfProfile=None, siteId=None, staticIP=None, subnetMask=None, type=None, vlanID=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Claim a device based on DNA-C Site based design process. Different parameters are required for different device platforms. .

Parameters

- **configInfo** (*object*) – Device Onboarding (PnP)'s configInfo.
- **deviceId** (*string*) – Device Onboarding (PnP)'s deviceId.
- **gateway** (*string*) – Device Onboarding (PnP)'s gateway.
- **imageInfo** (*object*) – Device Onboarding (PnP)'s imageInfo.
- **ipInterfaceName** (*string*) – Device Onboarding (PnP)'s ipInterfaceName.
- **rfProfile** (*string*) – Device Onboarding (PnP)'s rfProfile.
- **siteId** (*string*) – Device Onboarding (PnP)'s siteId.

- **staticIP** (*string*) – Device Onboarding (PnP)’s staticIP.
- **subnetMask** (*string*) – Device Onboarding (PnP)’s subnetMask.
- **type** (*string*) – Device Onboarding (PnP)’s type.
- **vlanID** (*string*) – Device Onboarding (PnP)’s vlanID.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

preview_config(*deviceId=None, siteId=None, type=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Triggers a preview for site-based Day 0 Configuration .

Parameters

- **deviceId** (*string*) – Device Onboarding (PnP)’s deviceId.
- **siteId** (*string*) – Device Onboarding (PnP)’s siteId.
- **type** (*string*) – Device Onboarding (PnP)’s type. Available values are ‘Default’, ‘AccessPoint’, ‘StackSwitch’, ‘Sensor’ and ‘MobilityExpress’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

un_claim_device(*deviceIdList=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Un-Claims one or more devices with specified workflow .

Parameters

- **deviceIdList** (*list*) – Device Onboarding (PnP)’s deviceIdList (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sync_virtual_account_devices(*autoSyncPeriod=None, ccoUser=None, expiry=None, lastSync=None, profile=None, smartAccountId=None, syncResult=None, syncResultStr=None, syncStartTime=None, syncStatus=None, tenantId=None, token=None, virtualAccountId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Synchronizes the device info from the given smart account & virtual account with the PnP database. The response payload returns a list of synced devices .

Parameters

- **autoSyncPeriod** (*integer*) – Device Onboarding (PnP)’s autoSyncPeriod.
- **ccoUser** (*string*) – Device Onboarding (PnP)’s ccoUser.
- **expiry** (*integer*) – Device Onboarding (PnP)’s expiry.
- **lastSync** (*integer*) – Device Onboarding (PnP)’s lastSync.
- **profile** (*object*) – Device Onboarding (PnP)’s profile.
- **smartAccountId** (*string*) – Device Onboarding (PnP)’s smartAccountId.
- **syncResult** (*object*) – Device Onboarding (PnP)’s syncResult.
- **syncResultStr** (*string*) – Device Onboarding (PnP)’s syncResultStr.
- **syncStartTime** (*integer*) – Device Onboarding (PnP)’s syncStartTime.
- **syncStatus** (*string*) – Device Onboarding (PnP)’s syncStatus. Available values are ‘NOT_SYNCED’, ‘SYNCING’, ‘SUCCESS’ and ‘FAILURE’.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **token** (*string*) – Device Onboarding (PnP)’s token.

- **virtualAccountId** (*string*) – Device Onboarding (PnP)’s virtualAccountId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_device(id, _id=None, deviceInfo=None, runSummaryList=None, systemResetWorkflow=None,
              systemWorkflow=None, tenantId=None, version=None, workflow=None,
              workflowParameters=None, headers=None, payload=None, active_validation=True,
              **request_parameters)
```

Updates device details specified by device id in PnP database .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)’s _id.
- **deviceInfo** (*object*) – Device Onboarding (PnP)’s deviceInfo.
- **runSummaryList** (*list*) – Device Onboarding (PnP)’s runSummaryList (list of objects).
- **systemResetWorkflow** (*object*) – Device Onboarding (PnP)’s systemResetWorkflow.
- **systemWorkflow** (*object*) – Device Onboarding (PnP)’s systemWorkflow.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **version** (*integer*) – Device Onboarding (PnP)’s version.
- **workflow** (*object*) – Device Onboarding (PnP)’s workflow.
- **workflowParameters** (*object*) – Device Onboarding (PnP)’s workflowParameters.
- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_device_by_id_from_pnp(*id*, *headers=None*, ***request_parameters*)

Deletes specified device from PnP database .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_by_id(*id*, *headers=None*, ***request_parameters*)

Returns device details specified by device id .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_pnp_global_settings(_id=None, aaaCredentials=None, acceptEula=None, defaultProfile=None,
                           savaMappingList=None, taskTimeOuts=None, tenantId=None,
                           version=None, headers=None, payload=None, active_validation=True,
                           **request_parameters)
```

Updates the user's list of global PnP settings .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)'s _id.
- **aaaCredentials** (*object*) – Device Onboarding (PnP)'s aaaCredentials.
- **acceptEula** (*boolean*) – Device Onboarding (PnP)'s acceptEula.
- **defaultProfile** (*object*) – Device Onboarding (PnP)'s defaultProfile.
- **savaMappingList** (*list*) – Device Onboarding (PnP)'s savaMappingList (list of objects).
- **taskTimeOuts** (*object*) – Device Onboarding (PnP)'s taskTimeOuts.
- **tenantId** (*string*) – Device Onboarding (PnP)'s tenantId.
- **version** (*integer*) – Device Onboarding (PnP)'s version.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_pnp_global_settings(headers=None, **request_parameters)
```

Returns global PnP settings of the user .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_smart_account_list(*headers=None, **request_parameters*)

Returns the list of Smart Account domains .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_virtual_account_list(*domain, headers=None, **request_parameters*)

Returns list of virtual accounts associated with the specified smart account .

Parameters

- **domain** (*basestring*) – domain path parameter. Smart Account Domain .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_virtual_account(*autoSyncPeriod=None, ccoUser=None, expiry=None, lastSync=None, profile=None, smartAccountId=None, syncResult=None, syncResultStr=None, syncStartTime=None, syncStatus=None, tenantId=None, token=None, virtualAccountId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Registers a Smart Account, Virtual Account and the relevant server profile info with the PnP System & database. The devices present in the registered virtual account are synced with the PnP database as well. The response payload returns the new profile .

Parameters

- **autoSyncPeriod** (*integer*) – Device Onboarding (PnP)’s autoSyncPeriod.
- **ccoUser** (*string*) – Device Onboarding (PnP)’s ccoUser.
- **expiry** (*integer*) – Device Onboarding (PnP)’s expiry.
- **lastSync** (*integer*) – Device Onboarding (PnP)’s lastSync.
- **profile** (*object*) – Device Onboarding (PnP)’s profile.
- **smartAccountId** (*string*) – Device Onboarding (PnP)’s smartAccountId.
- **syncResult** (*object*) – Device Onboarding (PnP)’s syncResult.
- **syncResultStr** (*string*) – Device Onboarding (PnP)’s syncResultStr.
- **syncStartTime** (*integer*) – Device Onboarding (PnP)’s syncStartTime.
- **syncStatus** (*string*) – Device Onboarding (PnP)’s syncStatus. Available values are ‘NOT_SYNCED’, ‘SYNCING’, ‘SUCCESS’ and ‘FAILURE’.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **token** (*string*) – Device Onboarding (PnP)’s token.
- **virtualAccountId** (*string*) – Device Onboarding (PnP)’s virtualAccountId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_pnp_server_profile(autoSyncPeriod=None, ccoUser=None, expiry=None, lastSync=None,
                           profile=None, smartAccountId=None, syncResult=None,
                           syncResultStr=None, syncStartTime=None, syncStatus=None,
                           tenantId=None, token=None, virtualAccountId=None, headers=None,
                           payload=None, active_validation=True, **request_parameters)
```

Updates the PnP Server profile in a registered Virtual Account in the PnP database. The response payload returns the updated smart & virtual account info .

Parameters

- **autoSyncPeriod** (*integer*) – Device Onboarding (PnP)’s autoSyncPeriod.
- **ccoUser** (*string*) – Device Onboarding (PnP)’s ccoUser.
- **expiry** (*integer*) – Device Onboarding (PnP)’s expiry.
- **lastSync** (*integer*) – Device Onboarding (PnP)’s lastSync.
- **profile** (*object*) – Device Onboarding (PnP)’s profile.
- **smartAccountId** (*string*) – Device Onboarding (PnP)’s smartAccountId.
- **syncResult** (*object*) – Device Onboarding (PnP)’s syncResult.
- **syncResultStr** (*string*) – Device Onboarding (PnP)’s syncResultStr.
- **syncStartTime** (*integer*) – Device Onboarding (PnP)’s syncStartTime.
- **syncStatus** (*string*) – Device Onboarding (PnP)’s syncStatus. Available values are ‘NOT_SYNCED’, ‘SYNCING’, ‘SUCCESS’ and ‘FAILURE’.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **token** (*string*) – Device Onboarding (PnP)’s token.
- **virtualAccountId** (*string*) – Device Onboarding (PnP)’s virtualAccountId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deregister_virtual_account (*domain*, *name*, *headers=None*, ***request_parameters*)

Deregisters the specified smart account & virtual account info and the associated device information from the PnP System & database. The devices associated with the deregistered virtual account are removed from the PnP database as well. The response payload contains the deregistered smart & virtual account information .

Parameters

- **domain** (*basestring*) – domain query parameter. Smart Account Domain .
- **name** (*basestring*) – name query parameter. Virtual Account Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_workflows(*limit=None, name=None, offset=None, sort=None, sort_order=None, type=None, headers=None, **request_parameters*)

Returns the list of workflows based on filter criteria. If a limit is not specified, it will default to return 50 workflows. Pagination and sorting are also supported by this endpoint .

Parameters

- **limit** (*basestring, int*) – limit query parameter. Limits number of results .
- **offset** (*basestring, int*) – offset query parameter. Index of first result .
- **sort** (*basestring, list, set, tuple*) – sort query parameter. Comma seperated list of fields to sort on .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **type** (*basestring, list, set, tuple*) – type query parameter. Workflow Type .
- **name** (*basestring, list, set, tuple*) – name query parameter. Workflow Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_a_workflow(*_id=None, addToInventory=None, addedOn=None, configId=None, currTaskIdx=None, description=None, endTime=None, execTime=None, imageId=None, instanceType=None, lastupdateOn=None, name=None, startTime=None, state=None, tasks=None, tenantId=None, type=None, useState=None, version=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Adds a PnP Workflow along with the relevant tasks in the workflow into the PnP database .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)’s _id.
- **addToInventory** (*boolean*) – Device Onboarding (PnP)’s addToInventory.
- **addedOn** (*integer*) – Device Onboarding (PnP)’s addedOn.
- **configId** (*string*) – Device Onboarding (PnP)’s configId.
- **currTaskIdx** (*integer*) – Device Onboarding (PnP)’s currTaskIdx.
- **description** (*string*) – Device Onboarding (PnP)’s description.
- **endTime** (*integer*) – Device Onboarding (PnP)’s endTime.
- **execTime** (*integer*) – Device Onboarding (PnP)’s execTime.
- **imageId** (*string*) – Device Onboarding (PnP)’s imageId.
- **instanceType** (*string*) – Device Onboarding (PnP)’s instanceType. Available values are ‘SystemWorkflow’, ‘UserWorkflow’ and ‘SystemResetWorkflow’.
- **lastupdateOn** (*integer*) – Device Onboarding (PnP)’s lastupdateOn.
- **name** (*string*) – Device Onboarding (PnP)’s name.
- **startTime** (*integer*) – Device Onboarding (PnP)’s startTime.
- **state** (*string*) – Device Onboarding (PnP)’s state.
- **tasks** (*list*) – Device Onboarding (PnP)’s tasks (list of objects).
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **type** (*string*) – Device Onboarding (PnP)’s type.
- **useState** (*string*) – Device Onboarding (PnP)’s useState.
- **version** (*integer*) – Device Onboarding (PnP)’s version.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_workflow_count (*name=None, headers=None, **request_parameters*)

Returns the workflow count .

Parameters

- **name** (*basestring, list, set, tuple*) – name query parameter. Workflow Name .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_workflow_by_id(*id*, *headers=None*, ***request_parameters*)

Returns a workflow specified by id .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_workflow_by_id(*id*, *headers=None*, ***request_parameters*)

Deletes a workflow specified by id .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_workflow(*id*, *_id=None*, *addToInventory=None*, *addedOn=None*, *configId=None*, *currTaskIdx=None*, *description=None*, *endTime=None*, *execTime=None*, *imageId=None*, *instanceType=None*, *lastupdateOn=None*, *name=None*, *startTime=None*, *state=None*, *tasks=None*, *tenantId=None*, *type=None*, *useState=None*, *version=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Updates an existing workflow .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)’s *_id*.
- **addToInventory** (*boolean*) – Device Onboarding (PnP)’s *addToInventory*.
- **addedOn** (*integer*) – Device Onboarding (PnP)’s *addedOn*.
- **configId** (*string*) – Device Onboarding (PnP)’s *configId*.
- **currTaskIdx** (*integer*) – Device Onboarding (PnP)’s *currTaskIdx*.
- **description** (*string*) – Device Onboarding (PnP)’s *description*.
- **endTime** (*integer*) – Device Onboarding (PnP)’s *endTime*.
- **execTime** (*integer*) – Device Onboarding (PnP)’s *execTime*.
- **imageId** (*string*) – Device Onboarding (PnP)’s *imageId*.
- **instanceType** (*string*) – Device Onboarding (PnP)’s *instanceType*. Available values are ‘SystemWorkflow’, ‘UserWorkflow’ and ‘SystemResetWorkflow’.
- **lastupdateOn** (*integer*) – Device Onboarding (PnP)’s *lastupdateOn*.
- **name** (*string*) – Device Onboarding (PnP)’s *name*.
- **startTime** (*integer*) – Device Onboarding (PnP)’s *startTime*.
- **state** (*string*) – Device Onboarding (PnP)’s *state*.
- **tasks** (*list*) – Device Onboarding (PnP)’s *tasks* (list of objects).
- **tenantId** (*string*) – Device Onboarding (PnP)’s *tenantId*.
- **type** (*string*) – Device Onboarding (PnP)’s *type*.
- **useState** (*string*) – Device Onboarding (PnP)’s *useState*.
- **version** (*integer*) – Device Onboarding (PnP)’s *version*.
- **id** (*basestring*) – *id* path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_replacement**class DeviceReplacement**

Cisco DNA Center Device Replacement API (version: 2.3.3.0).

Wraps the DNA Center Device Replacement API and exposes the API as native Python methods that return native Python objects.

```
return_replacement_devices_with_details(family=None, faulty_device_name=None,
                                          faulty_device_platform=None,
                                          faulty_device_serial_number=None, limit=None,
                                          offset=None, replacement_device_platform=None,
                                          replacement_device_serial_number=None,
                                          replacement_status=None, sort_by=None,
                                          sort_order=None, headers=None, **request_parameters)
```

Get list of replacement devices with replacement details and it can filter replacement devices based on Faulty Device Name, Faulty Device Platform, Replacement Device Platform, Faulty Device Serial Number, Replacement Device Serial Number, Device Replacement status, Product Family. .

Parameters

- **faulty_device_name** (*basestring*) – faultyDeviceName query parameter. Faulty Device Name .
- **faulty_device_platform** (*basestring*) – faultyDevicePlatform query parameter. Faulty Device Platform .
- **replacement_device_platform** (*basestring*) – replacementDevicePlatform query parameter. Replacement Device Platform .
- **faulty_device_serial_number** (*basestring*) – faultyDeviceSerialNumber query parameter. Faulty Device Serial Number .
- **replacement_device_serial_number** (*basestring*) – replacementDeviceSerialNumber query parameter. Replacement Device Serial Number .
- **replacement_status** (*basestring, list, set, tuple*) – replacementStatus query parameter. Device Replacement status [READY-FOR-REPLACEMENT, REPLACEMENT-IN-PROGRESS, REPLACEMENT-SCHEDULED, REPLACED, ERROR, NETWORK_READINESS_REQUESTED, NETWORK_READINESS_FAILED] .
- **family** (*basestring, list, set, tuple*) – family query parameter. List of families [Routers, Switches and Hubs, AP] .

- **sort_by** (*basestring*) – sortBy query parameter. SortBy this field. SortBy is mandatory when order is used. .
- **sort_order** (*basestring*) – sortOrder query parameter. Order on display-Name[ASC,DESC] .
- **offset** (*basestring*, *int*) – offset query parameter.
- **limit** (*basestring*, *int*) – limit query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

unmark_device_for_replacement(*headers=None, payload=None, active_validation=True, **request_parameters*)

UnMarks device for replacement .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

mark_device_for_replacement(*headers=None, payload=None, active_validation=True, **request_parameters*)

Marks device for replacement .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

return_replacement_devices_count(*replacement_status=None, headers=None, **request_parameters*)

Get replacement devices count .

Parameters

- **replacement_status** (*basestring, list, set, tuple*) – replacementStatus query parameter. Device Replacement status list[READY-FOR-REPLACEMENT, REPLACEMENT-IN-PROGRESS, REPLACEMENT-SCHEDULED, REPLACED, ERROR] .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deploy_device_replacement_workflow(*faultyDeviceSerialNumber=None, replacementDeviceSerialNumber=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to trigger RMA workflow that will replace faulty device with replacement device with same configuration and images .

Parameters

- **faultyDeviceSerialNumber** (*string*) – Device Replacement's faultyDeviceSerialNumber.

- **replacementDeviceSerialNumber** (*string*) – Device Replacement’s replacementDeviceSerialNumber.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

devices

class Devices

Cisco DNA Center Devices API (version: 2.3.3.0).

Wraps the DNA Center Devices API and exposes the API as native Python methods that return native Python objects.

get_planned_access_points_for_building(*building_id*, *limit=None*, *offset=None*, *radios=None*, *headers=None*, ***request_parameters*)

Provides a list of Planned Access Points for the Building it is requested for .

Parameters

- **building_id** (*basestring*) – buildingId path parameter. Building Id .
- **limit** (*basestring*, *int*) – limit query parameter.
- **offset** (*basestring*, *int*) – offset query parameter.
- **radios** (*bool*) – radios query parameter. include planned radio details .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_detail(*identifier, search_by, timestamp=None, headers=None, **request_parameters*)

Returns detailed Network Device information retrieved by Mac Address, Device Name or UUID for any given point of time. .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the device data is required .
- **search_by** (*basestring*) – searchBy query parameter. MAC Address or Device Name value or UUID of the network device .
- **identifier** (*basestring*) – identifier query parameter. One of keywords : macAddress or uuid or nwDeviceName .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_enrichment_details(*headers=None, **request_parameters*)

Enriches a given network device context (device id or device Mac Address or device management IP address) with details about the device and neighbor topology .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

devices(*device_role=None, end_time=None, health=None, limit=None, offset=None, site_id=None, start_time=None, headers=None, **request_parameters*)

Intent API for accessing DNA Assurance Device object for generating reports, creating dashboards or creating additional value added services. .

Parameters

- **device_role** (*basestring*) – deviceRole query parameter. The device role (One of CORE, ACCESS, DISTRIBUTION, ROUTER, WLC, AP) .
- **site_id** (*basestring*) – siteId query parameter. Assurance site UUID value .
- **health** (*basestring*) – health query parameter. The device overall health (One of POOR, FAIR, GOOD) .
- **start_time** (*int*) – startTime query parameter. UTC epoch time in milliseconds .
- **end_time** (*int*) – endTime query parameter. UTC epoch time in milliseconds .
- **limit** (*basestring, int*) – limit query parameter. Max number of device entries in the response (default to 50. Max at 1000) .
- **offset** (*basestring, int*) – offset query parameter. The offset of the first device in the returned data .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_planned_access_points_for_floor(*floor_id, limit=None, offset=None, radios=None, headers=None, **request_parameters*)

Provides a list of Planned Access Points for the Floor it is requested for .

Parameters

- **floor_id** (*basestring*) – floorId path parameter. Floor Id .
- **limit** (*basestring, int*) – limit query parameter.
- **offset** (*basestring, int*) – offset query parameter.
- **radios** (*bool*) – radios query parameter. include planned radio details .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_all_interfaces(*limit=None, offset=None, headers=None, **request_parameters*)

Returns all available interfaces. This endpoint can return a maximum of 500 interfaces .

Parameters

- **offset** (*basestring, int*) – offset query parameter.
- **limit** (*basestring, int*) – limit query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_interface_count(*headers=None, **request_parameters*)

Returns the count of interfaces for all devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_interface_by_ip(*ip_address*, *headers=None*, ***request_parameters*)

Returns list of interfaces for specified device management IP address .

Parameters

- **ip_address** (*basestring*) – ipAddress path parameter. IP address of the interface .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_isis_interfaces(*headers=None*, ***request_parameters*)

Returns the interfaces that has ISIS enabled .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_interface_info_by_id(*device_id*, *headers=None*, ***request_parameters*)

Returns list of interfaces by specified device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_interface_count_by_id(*device_id*, *headers=None*, ***request_parameters*)

Returns the interface count for the given device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_interface_details(*device_id*, *name*, *headers=None*, ***request_parameters*)

Returns interface by specified device Id and interface name .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **name** (*basestring*) – name query parameter. Interface name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_interfaces_by_specified_range(*device_id*, *records_to_return*, *start_index*,
headers=None, ***request_parameters*)

Returns the list of interfaces for the device for the specified range .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_ospf_interfaces(*headers=None*, ***request_parameters*)

Returns the interfaces that has OSPF enabled .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_interface_by_id(*id*, *headers=None*, ***request_parameters*)

Returns the interface for the given interface ID .

Parameters

- **id** (*basestring*) – id path parameter. Interface ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_interface_details(*interface_uuid*, *adminStatus=None*, *deployment_mode=None*, *description=None*, *vlanId=None*, *voiceVlanId=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add/Update Interface description, VLAN membership, Voice VLAN and change Interface admin status ('UP'/'DOWN') from Request body. .

Parameters

- **adminStatus** (*string*) – Devices's Admin Status.
- **description** (*string*) – Devices's Description.
- **vlanId** (*integer*) – Devices's Vlan Id.
- **voiceVlanId** (*integer*) – Devices's Voice Vlan Id.
- **interface_uuid** (*basestring*) – interfaceUuid path parameter. Interface ID .
- **deployment_mode** (*basestring*) – deploymentMode query parameter. Preview/Deploy ['Preview' means the configuration is not pushed to the device. 'Deploy' makes the configuration pushed to the device] .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

legit_operations_for_interface(*interface_uuid*, *headers=None*, ***request_parameters*)

Get list of all properties & operations valid for an interface. .

Parameters

- **interface_uuid** (*basestring*) – interfaceUuid path parameter. Interface ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

clear_mac_address_table(*interface_uuid*, *deployment_mode=None*, *operation=None*, *payload=None*, *headers=None*, *active_validation=True*, ***request_parameters*)

Clear mac-address on an individual port. In request body, operation needs to be specified as 'ClearMacAddress'. In the future more possible operations will be added to this API .

Parameters

- **operation** (*string*) – Devices's Operation.
- **payload** (*dict*) – Devices's Payload.
- **interface_uuid** (*basestring*) – interfaceUuid path parameter. Interface Id .
- **deployment_mode** (*basestring*) – deploymentMode query parameter. Preview/Deploy ['Preview' means the configuration is not pushed to the device. 'Deploy' makes the configuration pushed to the device] .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

get_device_list(*associated_wlc_ip=None, collection_interval=None, collection_status=None, device_support_level=None, error_code=None, error_description=None, family=None, hostname=None, id=None, license_name=None, license_status=None, license_type=None, limit=None, location=None, location_name=None, mac_address=None, management_ip_address=None, module_equipmenttype=None, module_name=None, module_operationstatecode=None, module_partnumber=None, module_servicestate=None, module_vendorequipmenttype=None, not_synced_for_minutes=None, offset=None, platform_id=None, reachability_status=None, role=None, serial_number=None, series=None, software_type=None, software_version=None, type=None, up_time=None, headers=None, **request_parameters*)

Returns list of network devices based on filter criteria such as management IP address, mac address, hostname, etc. You can use the `*` in any value to conduct a wildcard search. For example, to find all hostnames beginning with myhost in the IP address range 192.25.18.n, issue the following request: GET /dna/intent/api/v1/network-device?hostname=myhost.*&managementIpAddress=192.25.18.* If id parameter is provided with comma separated ids, it will return the list of network-devices for the given ids and ignores the other request parameters. You can also specify offset & limit to get the required list. .

Parameters

- **hostname** (*basestring, list, set, tuple*) – hostname query parameter.
- **management_ip_address** (*basestring, list, set, tuple*) – managementIpAddress query parameter.
- **mac_address** (*basestring, list, set, tuple*) – macAddress query parameter.
- **location_name** (*basestring, list, set, tuple*) – locationName query parameter.
- **serial_number** (*basestring, list, set, tuple*) – serialNumber query parameter.
- **location** (*basestring, list, set, tuple*) – location query parameter.
- **family** (*basestring, list, set, tuple*) – family query parameter.
- **type** (*basestring, list, set, tuple*) – type query parameter.
- **series** (*basestring, list, set, tuple*) – series query parameter.
- **collection_status** (*basestring, list, set, tuple*) – collectionStatus query parameter.
- **collection_interval** (*basestring, list, set, tuple*) – collectionInterval query parameter.
- **not_synced_for_minutes** (*basestring, list, set, tuple*) – notSyncedForMinutes query parameter.
- **error_code** (*basestring, list, set, tuple*) – errorCode query parameter.
- **error_description** (*basestring, list, set, tuple*) – errorDescription query parameter.
- **software_version** (*basestring, list, set, tuple*) – softwareVersion query parameter.
- **software_type** (*basestring, list, set, tuple*) – softwareType query parameter.
- **platform_id** (*basestring, list, set, tuple*) – platformId query parameter.
- **role** (*basestring, list, set, tuple*) – role query parameter.

- **reachability_status** (*basestring*, *list*, *set*, *tuple*) – reachabilityStatus query parameter.
- **up_time** (*basestring*, *list*, *set*, *tuple*) – upTime query parameter.
- **associated_wlc_ip** (*basestring*, *list*, *set*, *tuple*) – associatedWlcIp query parameter.
- **license_name** (*basestring*, *list*, *set*, *tuple*) – license.name query parameter.
- **license_type** (*basestring*, *list*, *set*, *tuple*) – license.type query parameter.
- **license_status** (*basestring*, *list*, *set*, *tuple*) – license.status query parameter.
- **module_name** (*basestring*, *list*, *set*, *tuple*) – module+name query parameter.
- **module_equipmenttype** (*basestring*, *list*, *set*, *tuple*) – module+equipmenttype query parameter.
- **module_servicestate** (*basestring*, *list*, *set*, *tuple*) – module+servicestate query parameter.
- **module_vendorequipmenttype** (*basestring*, *list*, *set*, *tuple*) – module+vendorequipmenttype query parameter.
- **module_partnumber** (*basestring*, *list*, *set*, *tuple*) – module+partnumber query parameter.
- **module_operationstatecode** (*basestring*, *list*, *set*, *tuple*) – module+operationstatecode query parameter.
- **id** (*basestring*) – id query parameter. Accepts comma separated ids and return list of network-devices for the given ids. If invalid or not-found ids are provided, null entry will be returned in the list. .
- **device_support_level** (*basestring*) – deviceSupportLevel query parameter.
- **offset** (*basestring*, *int*) – offset query parameter. offset >= 1 [X gives results from Xth device onwards] .
- **limit** (*basestring*, *int*) – limit query parameter. 1 <= limit <= 500 [max. no. of devices to be returned in the result] .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
add_device(cliTransport=None, computeDevice=None, enablePassword=None,
           extendedDiscoveryInfo=None, httpPassword=None, httpPort=None, httpSecure=None,
           httpUserName=None, ipAddress=None, merakiOrgId=None, netconfPort=None,
           password=None, serialNumber=None, snmpAuthPassphrase=None, snmpAuthProtocol=None,
           snmpMode=None, snmpPrivPassphrase=None, snmpPrivProtocol=None,
           snmpROCommunity=None, snmpRWCommunity=None, snmpRetry=None, snmpTimeout=None,
           snmpUserName=None, snmpVersion=None, type=None, updateMgmtIPaddressList=None,
           userName=None, headers=None, payload=None, active_validation=True,
           **request_parameters)
```

Adds the device with given credential .

Parameters

- **cliTransport** (*string*) – Devices’s cliTransport.
- **computeDevice** (*boolean*) – Devices’s computeDevice.
- **enablePassword** (*string*) – Devices’s enablePassword.
- **extendedDiscoveryInfo** (*string*) – Devices’s extendedDiscoveryInfo.
- **httpPassword** (*string*) – Devices’s httpPassword.
- **httpPort** (*string*) – Devices’s httpPort.
- **httpSecure** (*boolean*) – Devices’s httpSecure.
- **httpUserName** (*string*) – Devices’s httpUserName.
- **ipAddress** (*list*) – Devices’s ipAddress (list of strings).
- **merakiOrgId** (*list*) – Devices’s merakiOrgId (list of strings).
- **netconfPort** (*string*) – Devices’s netconfPort.
- **password** (*string*) – Devices’s password.
- **serialNumber** (*string*) – Devices’s serialNumber.
- **snmpAuthPassphrase** (*string*) – Devices’s snmpAuthPassphrase.
- **snmpAuthProtocol** (*string*) – Devices’s snmpAuthProtocol.
- **snmpMode** (*string*) – Devices’s snmpMode.
- **snmpPrivPassphrase** (*string*) – Devices’s snmpPrivPassphrase.
- **snmpPrivProtocol** (*string*) – Devices’s snmpPrivProtocol.
- **snmpROCommunity** (*string*) – Devices’s snmpROCommunity.
- **snmpRWCommunity** (*string*) – Devices’s snmpRWCommunity.
- **snmpRetry** (*integer*) – Devices’s snmpRetry.
- **snmpTimeout** (*integer*) – Devices’s snmpTimeout.
- **snmpUserName** (*string*) – Devices’s snmpUserName.
- **snmpVersion** (*string*) – Devices’s snmpVersion.
- **type** (*string*) – Devices’s type. Available values are ‘COMPUTE_DEVICE’, ‘MERAKI_DASHBOARD’, ‘NETWORK_DEVICE’ and ‘NODATACHANGE’.
- **updateMgmtIPaddressList** (*list*) – Devices’s updateMgmtIPaddressList (list of objects).
- **userName** (*string*) – Devices’s userName.

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sync_devices(*cliTransport=None, computeDevice=None, enablePassword=None, extendedDiscoveryInfo=None, httpPassword=None, httpPort=None, httpSecure=None, httpUserName=None, ipAddress=None, merakiOrgId=None, netconfPort=None, password=None, serialNumber=None, snmpAuthPassphrase=None, snmpAuthProtocol=None, snmpMode=None, snmpPrivPassphrase=None, snmpPrivProtocol=None, snmpROCommunity=None, snmpRWCommunity=None, snmpRetry=None, snmpTimeout=None, snmpUserName=None, snmpVersion=None, type=None, updateMgmtIpAddressList=None, userName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Sync the devices provided as input .

Parameters

- **cliTransport** (*string*) – Devices's cliTransport.
- **computeDevice** (*boolean*) – Devices's computeDevice.
- **enablePassword** (*string*) – Devices's enablePassword.
- **extendedDiscoveryInfo** (*string*) – Devices's extendedDiscoveryInfo.
- **httpPassword** (*string*) – Devices's httpPassword.
- **httpPort** (*string*) – Devices's httpPort.
- **httpSecure** (*boolean*) – Devices's httpSecure.
- **httpUserName** (*string*) – Devices's httpUserName.
- **ipAddress** (*list*) – Devices's ipAddress (list of strings).
- **merakiOrgId** (*list*) – Devices's merakiOrgId (list of strings).
- **netconfPort** (*string*) – Devices's netconfPort.
- **password** (*string*) – Devices's password.
- **serialNumber** (*string*) – Devices's serialNumber.
- **snmpAuthPassphrase** (*string*) – Devices's snmpAuthPassphrase.
- **snmpAuthProtocol** (*string*) – Devices's snmpAuthProtocol.

- **snmpMode** (*string*) – Devices’s snmpMode.
- **snmpPrivPassphrase** (*string*) – Devices’s snmpPrivPassphrase.
- **snmpPrivProtocol** (*string*) – Devices’s snmpPrivProtocol.
- **snmpROCommunity** (*string*) – Devices’s snmpROCommunity.
- **snmpRWCommunity** (*string*) – Devices’s snmpRWCommunity.
- **snmpRetry** (*integer*) – Devices’s snmpRetry.
- **snmpTimeout** (*integer*) – Devices’s snmpTimeout.
- **snmpUserName** (*string*) – Devices’s snmpUserName.
- **snmpVersion** (*string*) – Devices’s snmpVersion.
- **type** (*string*) – Devices’s type. Available values are ‘COMPUTE_DEVICE’, ‘MERAKI_DASHBOARD’, ‘NETWORK_DEVICE’ and ‘NODATACHANGE’.
- **updateMgmtIPAddressList** (*list*) – Devices’s updateMgmtIPAddressList (list of objects).
- **userName** (*string*) – Devices’s userName.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_device_values_that_match_fully_or_partially_an_attribute(associated_wlc_ip=None,  
collection_interval=None,  
collection_status=None,  
error_code=None,  
family=None,  
hostname=None, limit=None,  
mac_address=None, management_ip_address=None,  
offset=None,  
platform_id=None, reachability_failure_reason=None,  
reachability_status=None,  
role=None,  
role_source=None,  
serial_number=None,  
series=None,  
software_type=None,  
software_version=None,  
type=None, up_time=None,  
vrf_name=None,  
headers=None,  
**request_parameters)
```

Returns the list of values of the first given required parameter. You can use the `.*` in any value to conduct a wildcard search. For example, to get all the devices with the management IP address starting with 10.10. , issue the following request: `GET /dna/inten/api/v1/network-device/autocomplete?managementIpAddress=10.10.*` It will return the device management IP addresses that match fully or partially the provided attribute. `{[10.10.1.1, 10.10.20.2, ...]}` .

Parameters

- **vrf_name** (*basestring*) – vrfName query parameter.
- **management_ip_address** (*basestring*) – managementIpAddress query parameter.
- **hostname** (*basestring*) – hostname query parameter.
- **mac_address** (*basestring*) – macAddress query parameter.
- **family** (*basestring*) – family query parameter.
- **collection_status** (*basestring*) – collectionStatus query parameter.
- **collection_interval** (*basestring*) – collectionInterval query parameter.
- **software_version** (*basestring*) – softwareVersion query parameter.
- **software_type** (*basestring*) – softwareType query parameter.
- **reachability_status** (*basestring*) – reachabilityStatus query parameter.
- **reachability_failure_reason** (*basestring*) – reachabilityFailureReason query parameter.
- **error_code** (*basestring*) – errorCode query parameter.
- **platform_id** (*basestring*) – platformId query parameter.
- **series** (*basestring*) – series query parameter.
- **type** (*basestring*) – type query parameter.
- **serial_number** (*basestring*) – serialNumber query parameter.

- **up_time** (*basestring*) – upTime query parameter.
- **role** (*basestring*) – role query parameter.
- **role_source** (*basestring*) – roleSource query parameter.
- **associated_wlc_ip** (*basestring*) – associatedWlcIp query parameter.
- **offset** (*basestring*, *int*) – offset query parameter.
- **limit** (*basestring*, *int*) – limit query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_device_role(*id=None, role=None, roleSource=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates the role of the device as access, core, distribution, border router .

Parameters

- **id** (*string*) – Devices's id.
- **role** (*string*) – Devices's role.
- **roleSource** (*string*) – Devices's roleSource.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_polling_interval_for_all_devices(*headers=None, **request_parameters*)

Returns polling interval of all devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_config_for_all_devices(*headers=None, **request_parameters*)

Returns the config for all devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_config_count(*headers=None, **request_parameters*)

Returns the count of device configs .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_count(*headers=None, **request_parameters*)

Returns the count of network devices based on the filter criteria by management IP address, mac address, hostname and location name .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

export_device_list(*deviceUuids=None, id=None, operationEnum=None, parameters=None, password=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Exports the selected network device to a file .

Parameters

- **deviceUuids** (*list*) – Devices's deviceUuids (list of strings).
- **id** (*string*) – Devices's id.
- **operationEnum** (*string*) – Devices's operationEnum. Available values are 'CREDENTIALDETAILS' and 'DEVICEDETAILS'.
- **parameters** (*list*) – Devices's parameters (list of strings).
- **password** (*string*) – Devices's password.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_functional_capability_for_devices(*device_id*, *function_name*=None, *headers*=None, ***request_parameters*)

Returns the functional-capability for given devices .

Parameters

- **device_id** (*basestring*) – deviceId query parameter. Accepts comma separated deviceId's and return list of functional-capabilities for the given id's. If invalid or not-found id's are provided, null entry will be returned in the list. .
- **function_name** (*basestring*, *list*, *set*, *tuple*) – functionName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_functional_capability_by_id(*id*, *headers*=None, ***request_parameters*)

Returns functional capability with given Id .

Parameters

- **id** (*basestring*) – id path parameter. Functional Capability UUID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

inventory_insight_device_link_mismatch(*category*, *site_id*, *limit=None*, *offset=None*, *order=None*, *sort_by=None*, *headers=None*, ***request_parameters*)

Find all devices with link mismatch (speed / vlan) .

Parameters

- **site_id** (*basestring*) – siteId path parameter.
- **offset** (*basestring*, *int*) – offset query parameter. Row Number. Default value is 1 .
- **limit** (*basestring*, *int*) – limit query parameter. Default value is 500 .
- **category** (*basestring*) – category query parameter. Links mismatch category. Value can be speed-duplex or vlan. .
- **sort_by** (*basestring*) – sortBy query parameter. Sort By .
- **order** (*basestring*) – order query parameter. Order. Value can be asc or desc. Default value is asc .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_devices_with_snmpv3_des(*site_id*, *limit=None*, *offset=None*, *order=None*, *sort_by=None*, *headers=None*, ***request_parameters*)

Returns devices added to Cisco DNA center with snmp v3 DES, where siteId is mandatory & accepts offset, limit, sortby, order which are optional. .

Parameters

- **site_id** (*basestring*) – siteId path parameter.
- **offset** (*basestring*, *int*) – offset query parameter. Row Number. Default value is 1 .
- **limit** (*basestring*, *int*) – limit query parameter. Default value is 500 .
- **sort_by** (*basestring*) – sortBy query parameter. Sort By .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_network_device_by_ip(*ip_address*, *headers=None*, ***request_parameters*)

Returns the network device by specified IP address .

Parameters

- **ip_address** (*basestring*) – ipAddress path parameter. Device IP address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_modules(*device_id*, *limit=None*, *name_list=None*, *offset=None*, *operational_state_code_list=None*, *part_number_list=None*, *vendor_equipment_type_list=None*, *headers=None*, ***request_parameters*)

Returns modules by specified device id .

Parameters

- **device_id** (*basestring*) – deviceId query parameter.
- **limit** (*basestring*, *int*) – limit query parameter.
- **offset** (*basestring*, *int*) – offset query parameter.
- **name_list** (*basestring*, *list*, *set*, *tuple*) – nameList query parameter.
- **vendor_equipment_type_list** (*basestring*, *list*, *set*, *tuple*) – vendorEquipmentTypeList query parameter.
- **part_number_list** (*basestring*, *list*, *set*, *tuple*) – partNumberList query parameter.
- **operational_state_code_list** (*basestring*, *list*, *set*, *tuple*) – operationalStateCodeList query parameter.

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_module_count(*device_id*, *name_list=None*, *operational_state_code_list=None*, *part_number_list=None*, *vendor_equipment_type_list=None*, *headers=None*, ***request_parameters*)

Returns Module Count .

Parameters

- **device_id** (*basestring*) – deviceId query parameter.
- **name_list** (*basestring*, *list*, *set*, *tuple*) – nameList query parameter.
- **vendor_equipment_type_list** (*basestring*, *list*, *set*, *tuple*) – vendorEquipmentTypeList query parameter.
- **part_number_list** (*basestring*, *list*, *set*, *tuple*) – partNumberList query parameter.
- **operational_state_code_list** (*basestring*, *list*, *set*, *tuple*) – operationalStateCodeList query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_module_info_by_id(*id*, *headers=None*, ***request_parameters*)

Returns Module info by 'module id' .

Parameters

- **id** (*basestring*) – id path parameter. Module id .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_by_serial_number(*serial_number*, *headers=None*, ***request_parameters*)

Returns the network device with given serial number .

Parameters

- **serial_number** (*basestring*) – serialNumber path parameter. Device serial number .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sync_devices_using_forcesync(*force_sync=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Synchronizes the devices. If forceSync param is false (default) then the sync would run in normal priority thread. If forceSync param is true then the sync would run in high priority thread if available, else the sync will fail. Result can be seen in the child task of each device .

Parameters

- **force_sync** (*bool*) – forceSync query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

register_device_for_wsa(*macaddress=None, serial_number=None, headers=None, **request_parameters*)

Registers a device for WSA notification .

Parameters

- **serial_number** (*basestring*) – serialNumber query parameter. Serial number of the device .
- **macaddress** (*basestring*) – macaddress query parameter. Mac address of the device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_chassis_details_for_device(*device_id, headers=None, **request_parameters*)

Returns chassis details for given device ID .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_stack_details_for_device(*device_id*, *headers=None*, ***request_parameters*)

Retrieves complete stack details for given device ID .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

return_power_supply_fan_details_for_the_given_device(*device_uuid*, *type*, *headers=None*, ***request_parameters*)

Return PowerSupply/ Fan details for the Given device .

Parameters

- **device_uuid** (*basestring*) – deviceId path parameter.
- **type** (*basestring*) – type query parameter. Type value should be PowerSupply or Fan .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

poe_interface_details(*device_uuid*, *interface_name_list=None*, *headers=None*, ***request_parameters*)

Returns POE interface details for the device, where deviceuuid is mandatory & accepts comma separated interface names which is optional and returns information for that particular interfaces where(operStatus = operationalStatus) .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. uuid of the device .
- **interface_name_list** (*basestring*) – interfaceNameList query parameter. comma separated interface names .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_connected_device_detail(*device_uuid*, *interface_uuid*, *headers=None*, ***request_parameters*)

Get connected device detail for given deviceUuid and interfaceUuid .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. instanceuuid of Device .
- **interface_uuid** (*basestring*) – interfaceUuid path parameter. instanceuuid of interface .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_linecard_details(*device_uuid*, *headers=None*, ***request_parameters*)

Get line card detail for a given deviceuuid. Response will contain serial no, part no, switch no and slot no.

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. instanceuuid of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

poe_details_(*device_uuid*, *headers=None*, ***request_parameters*)

Returns POE details for device. .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. uuid of the device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

poe_details(*device_uuid*, *headers=None*, ***request_parameters*)

Returns POE details for device. .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. uuid of the device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_supervisor_card_detail(*device_uuid*, *headers=None*, ***request_parameters*)

Get supervisor card detail for a given deviceuuid. Response will contain serial no, part no, switch no and slot no. .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. instanceuuid of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_by_id(*id*, *headers=None*, ***request_parameters*)

Returns the network device details for the given device ID .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_device_by_id(*id*, *clean_config=None*, *headers=None*, ***request_parameters*)

Deletes the network device for the given Id .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **clean_config** (*bool*) – cleanConfig query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_summary(*id*, *headers=None*, ***request_parameters*)

Returns brief summary of device info such as hostname, management IP address for the given device Id .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_polling_interval_by_id(*id*, *headers=None*, ***request_parameters*)

Returns polling interval by device id .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_organization_list_for_meraki(*id*, *headers=None*, ***request_parameters*)

Returns list of organizations for meraki dashboard .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_interface_vlans(*id*, *interface_type=None*, *headers=None*, ***request_parameters*)

Returns Device Interface VLANs .

Parameters

- **id** (*basestring*) – id path parameter.
- **interface_type** (*basestring*) – interfaceType query parameter. Vlan associated with sub-interface .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_wireless_lan_controller_details_by_id(*id*, *headers=None*, ***request_parameters*)

Returns the wireless lan controller info with given device ID .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_config_by_id(*network_device_id*, *headers=None*, ***request_parameters*)

Returns the device config by specified device ID .

Parameters

- **network_device_id** (*basestring*) – networkDeviceId path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_network_device_by_pagination_range(*records_to_return*, *start_index*, *headers=None*, ***request_parameters*)

Returns the list of network devices for the given pagination range .

Parameters

- **start_index** (*int*) – startIndex path parameter. Start index .

- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

discovery

class Discovery

Cisco DNA Center Discovery API (version: 2.3.3.0).

Wraps the DNA Center Discovery API and exposes the API as native Python methods that return native Python objects.

delete_all_discovery(*headers=None, **request_parameters*)

Stops all the discoveries and removes them .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
updates_discovery_by_id(attributeInfo=None, cdpLevel=None, deviceIds=None,
                        discoveryCondition=None, discoveryStatus=None, discoveryType=None,
                        enablePasswordList=None, globalCredentialIdList=None,
                        httpReadCredential=None, httpWriteCredential=None, id=None,
                        ipAddressList=None, ipFilterList=None, isAutoCdp=None, lldpLevel=None,
                        name=None, netconfPort=None, numDevices=None, parentDiscoveryId=None,
                        passwordList=None, preferredMgmtIPMethod=None, protocolOrder=None,
                        retryCount=None, snmpAuthPassphrase=None, snmpAuthProtocol=None,
                        snmpMode=None, snmpPrivPassphrase=None, snmpPrivProtocol=None,
                        snmpRoCommunity=None, snmpRoCommunityDesc=None,
                        snmpRwCommunity=None, snmpRwCommunityDesc=None,
                        snmpUserName=None, timeOut=None, updateMgmtIp=None,
                        userNameList=None, headers=None, payload=None, active_validation=True,
                        **request_parameters)
```

Stops or starts an existing discovery .

Parameters

- **attributeInfo** (*object*) – Discovery’s attributeInfo.
- **cdpLevel** (*integer*) – Discovery’s cdpLevel.
- **deviceIds** (*string*) – Discovery’s deviceIds.
- **discoveryCondition** (*string*) – Discovery’s discoveryCondition.
- **discoveryStatus** (*string*) – Discovery’s discoveryStatus.
- **discoveryType** (*string*) – Discovery’s discoveryType.
- **enablePasswordList** (*string*) – Discovery’s enablePasswordList.
- **globalCredentialIdList** (*list*) – Discovery’s globalCredentialIdList (list of strings).
- **httpReadCredential** (*object*) – Discovery’s httpReadCredential.
- **httpWriteCredential** (*object*) – Discovery’s httpWriteCredential.
- **id** (*string*) – Discovery’s id.
- **ipAddressList** (*string*) – Discovery’s ipAddressList.
- **ipFilterList** (*string*) – Discovery’s ipFilterList.
- **isAutoCdp** (*boolean*) – Discovery’s isAutoCdp.
- **lldpLevel** (*integer*) – Discovery’s lldpLevel.
- **name** (*string*) – Discovery’s name.
- **netconfPort** (*string*) – Discovery’s netconfPort.
- **numDevices** (*integer*) – Discovery’s numDevices.
- **parentDiscoveryId** (*string*) – Discovery’s parentDiscoveryId.
- **passwordList** (*string*) – Discovery’s passwordList.
- **preferredMgmtIPMethod** (*string*) – Discovery’s preferredMgmtIPMethod.
- **protocolOrder** (*string*) – Discovery’s protocolOrder.
- **retryCount** (*integer*) – Discovery’s retryCount.
- **snmpAuthPassphrase** (*string*) – Discovery’s snmpAuthPassphrase.
- **snmpAuthProtocol** (*string*) – Discovery’s snmpAuthProtocol.

- **snmpMode** (*string*) – Discovery’s snmpMode.
- **snmpPrivPassphrase** (*string*) – Discovery’s snmpPrivPassphrase.
- **snmpPrivProtocol** (*string*) – Discovery’s snmpPrivProtocol.
- **snmpRoCommunity** (*string*) – Discovery’s snmpRoCommunity.
- **snmpRoCommunityDesc** (*string*) – Discovery’s snmpRoCommunityDesc.
- **snmpRwCommunity** (*string*) – Discovery’s snmpRwCommunity.
- **snmpRwCommunityDesc** (*string*) – Discovery’s snmpRwCommunityDesc.
- **snmpUserName** (*string*) – Discovery’s snmpUserName.
- **timeOut** (*integer*) – Discovery’s timeOut.
- **updateMgmtIp** (*boolean*) – Discovery’s updateMgmtIp.
- **userNameList** (*string*) – Discovery’s userNameList.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

start_discovery(*cdpLevel=None, discoveryType=None, enablePasswordList=None, globalCredentialIdList=None, httpReadCredential=None, httpWriteCredential=None, ipAddressList=None, ipFilterList=None, lldpLevel=None, name=None, netconfPort=None, passwordList=None, preferredMgmtIPMethod=None, protocolOrder=None, retry=None, snmpAuthPassphrase=None, snmpAuthProtocol=None, snmpMode=None, snmpPrivPassphrase=None, snmpPrivProtocol=None, snmpROCommunity=None, snmpROCommunityDesc=None, snmpRWCommunity=None, snmpRWCommunityDesc=None, snmpUserName=None, snmpVersion=None, timeout=None, userNameList=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Initiates discovery with the given parameters .

Parameters

- **cdpLevel** (*integer*) – Discovery’s CDP level to which neighbor devices to be discovered .
- **discoveryType** (*string*) – Discovery’s Type of Discovery. ‘SINGLE’, ‘RANGE’, ‘MULTI RANGE’, ‘CDP’, ‘LLDP’ .

- **enablePasswordList** (*list*) – Discovery’s Enable Password of the devices to be discovered (list of strings).
- **globalCredentialIdList** (*list*) – Discovery’s Global Credential Ids to be used for discovery (list of strings).
- **httpReadCredential** (*object*) – Discovery’s httpReadCredential.
- **httpWriteCredential** (*object*) – Discovery’s httpWriteCredential.
- **ipAddressList** (*string*) – Discovery’s IP Address of devices to be discovered. Ex: ‘172.30.0.1’ for SINGLE, CDP and LLDP; ‘72.30.0.1-172.30.0.4’ for RANGE; ‘72.30.0.1-172.30.0.4,172.31.0.1-172.31.0.4’ for MULTI RANGE .
- **ipFilterList** (*list*) – Discovery’s IP Addresses of the devices to be filtered out during discovery (list of strings).
- **lldpLevel** (*integer*) – Discovery’s LLDP level to which neighbor devices to be discovered .
- **name** (*string*) – Discovery’s Name of the discovery .
- **netconfPort** (*string*) – Discovery’s Netconf Port. It will need valid SSH credentials to work .
- **passwordList** (*list*) – Discovery’s Password of the devices to be discovered (list of strings).
- **preferredMgmtIPMethod** (*string*) – Discovery’s Preferred Management IP Method. ‘None’ or ‘UseLoopBack’. Default is ‘None’ .
- **protocolOrder** (*string*) – Discovery’s Order of protocol (ssh/telnet) in which device connection will be tried. Ex: ‘telnet’: only telnet; ‘ssh,telnet’: ssh with higher order than telnet .
- **retry** (*integer*) – Discovery’s Number of times to try establishing connection to device .
- **snmpAuthPassphrase** (*string*) – Discovery’s Auth Pass phrase for SNMP .
- **snmpAuthProtocol** (*string*) – Discovery’s SNMP auth protocol. SHA’ or ‘MD5’ .
- **snmpMode** (*string*) – Discovery’s Mode of SNMP. ‘AUTHPRIV’ or ‘AUTHNOPRIV’ or ‘NOAUTHNOPRIV’ .
- **snmpPrivPassphrase** (*string*) – Discovery’s Pass phrase for SNMP privacy .
- **snmpPrivProtocol** (*string*) – Discovery’s SNMP privacy protocol. ‘DES’ or ‘AES128’ .
- **snmpROCommunity** (*string*) – Discovery’s Snmp RO community of the devices to be discovered .
- **snmpROCommunityDesc** (*string*) – Discovery’s Description for Snmp RO community .
- **snmpRWCommunity** (*string*) – Discovery’s Snmp RW community of the devices to be discovered .
- **snmpRWCommunityDesc** (*string*) – Discovery’s Description for Snmp RW community .
- **snmpUserName** (*string*) – Discovery’s SNMP username of the device .
- **snmpVersion** (*string*) – Discovery’s Version of SNMP. v2 or v3 .
- **timeout** (*integer*) – Discovery’s Time to wait for device response in seconds .

- **userNameList** (*list*) – Discovery’s Username of the devices to be discovered (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_count_of_all_discovery_jobs(*headers=None, **request_parameters*)

Returns the count of all available discovery jobs .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_discovery_jobs_by_ip(*ip_address, limit=None, name=None, offset=None, headers=None, **request_parameters*)

Returns the list of discovery jobs for the given IP .

Parameters

- **offset** (*basestring, int*) – offset query parameter.
- **limit** (*basestring, int*) – limit query parameter.
- **ip_address** (*basestring*) – ipAddress query parameter.
- **name** (*basestring*) – name query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_discovery_by_id(*id*, *headers=None*, ***request_parameters*)

Stops the discovery for the given Discovery ID and removes it. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_discovery_by_id(*id*, *headers=None*, ***request_parameters*)

Returns discovery by Discovery ID. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_list_of_discoveries_by_discovery_id(*id*, *ip_address=None*, *limit=None*, *offset=None*,
headers=None, ***request_parameters*)

Returns the list of discovery jobs for the given Discovery ID. The results can be optionally filtered based on IP. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **offset** (*basestring*, *int*) – offset query parameter.
- **limit** (*basestring*, *int*) – limit query parameter.
- **ip_address** (*basestring*) – ipAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_discovered_network_devices_by_discovery_id(*id*, *task_id=None*, *headers=None*,
***request_parameters*)

Returns the network devices discovered for the given Discovery ID. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **task_id** (*basestring*) – taskId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_devices_discovered_by_id(*id*, *task_id=None*, *headers=None*, ***request_parameters*)

Returns the count of network devices discovered in the given discovery. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **task_id** (*basestring*) – taskId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_discovered_devices_by_range(*id*, *records_to_return*, *start_index*, *task_id=None*, *headers=None*, ***request_parameters*)

Returns the network devices discovered for the given discovery and for the given range. The maximum number of records that can be retrieved is 500. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **task_id** (*basestring*) – taskId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_network_devices_from_discovery(*id*, *cli_status=None*, *http_status=None*, *ip_address=None*, *netconf_status=None*, *ping_status=None*, *snmp_status=None*, *sort_by=None*, *sort_order=None*, *task_id=None*, *headers=None*, ***request_parameters*)

Returns the network devices from a discovery job based on given filters. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **task_id** (*basestring*) – taskId query parameter.
- **sort_by** (*basestring*) – sortBy query parameter.
- **sort_order** (*basestring*) – sortOrder query parameter.
- **ip_address** (*basestring*, *list*, *set*, *tuple*) – ipAddress query parameter.
- **ping_status** (*basestring*, *list*, *set*, *tuple*) – pingStatus query parameter.
- **snmp_status** (*basestring*, *list*, *set*, *tuple*) – snmpStatus query parameter.
- **cli_status** (*basestring*, *list*, *set*, *tuple*) – cliStatus query parameter.
- **netconf_status** (*basestring*, *list*, *set*, *tuple*) – netconfStatus query parameter.
- **http_status** (*basestring*, *list*, *set*, *tuple*) – httpStatus query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_discovery_by_specified_range(*records_to_delete*, *start_index*, *headers=None*, ***request_parameters*)

Stops discovery for the given range and removes them .

Parameters

- **start_index** (*int*) – startIndex path parameter. Start index .

- **records_to_delete** (*int*) – recordsToDelete path parameter. Number of records to delete .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_discoveries_by_range(*records_to_return*, *start_index*, *headers=None*, ***request_parameters*)

Returns the discovery by specified range .

Parameters

- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_global_credentials(*credential_sub_type*, *order=None*, *sort_by=None*, *headers=None*, ***request_parameters*)

Returns global credential for the given credential sub type .

Parameters

- **credential_sub_type** (*basestring*) – credentialSubType query parameter. Credential type as CLI / SNMPV2_READ_COMMUNITY / SNMPV2_WRITE_COMMUNITY / SNMPV3 / HTTP_WRITE / HTTP_READ / NETCONF .
- **sort_by** (*basestring*) – sortBy query parameter.
- **order** (*basestring*) – order query parameter.

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_cli_credentials(*comments=None, credentialType=None, description=None, enablePassword=None, id=None, instanceTenantId=None, instanceUuid=None, password=None, username=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates global CLI credentials .

Parameters

- **comments** (*string*) – Discovery's comments.
- **credentialType** (*string*) – Discovery's credentialType. Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's description.
- **enablePassword** (*string*) – Discovery's enablePassword.
- **id** (*string*) – Discovery's id.
- **instanceTenantId** (*string*) – Discovery's instanceTenantId.
- **instanceUuid** (*string*) – Discovery's instanceUuid.
- **password** (*string*) – Discovery's password.
- **username** (*string*) – Discovery's username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_cli_credentials(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global CLI credential .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_http_read_credentials(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds HTTP read credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_http_read_credential(*comments=None, credentialType=None, description=None, id=None, instanceTenantId=None, instanceUuid=None, password=None, port=None, secure=None, username=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates global HTTP Read credential .

Parameters

- **comments** (*string*) – Discovery’s comments.
- **credentialType** (*string*) – Discovery’s credentialType. Available values are ‘GLOBAL’ and ‘APP’.
- **description** (*string*) – Discovery’s description.
- **id** (*string*) – Discovery’s id.
- **instanceTenantId** (*string*) – Discovery’s instanceTenantId.
- **instanceUuid** (*string*) – Discovery’s instanceUuid.
- **password** (*string*) – Discovery’s password.
- **port** (*integer*) – Discovery’s port.
- **secure** (*boolean*) – Discovery’s secure.
- **username** (*string*) – Discovery’s username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_http_write_credentials(*comments=None, credentialType=None, description=None, id=None, instanceTenantId=None, instanceUuid=None, password=None, port=None, secure=None, username=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates global HTTP write credentials .

Parameters

- **comments** (*string*) – Discovery’s comments.
- **credentialType** (*string*) – Discovery’s credentialType. Available values are ‘GLOBAL’ and ‘APP’.
- **description** (*string*) – Discovery’s description.
- **id** (*string*) – Discovery’s id.
- **instanceTenantId** (*string*) – Discovery’s instanceTenantId.

- **instanceUuid** (*string*) – Discovery’s instanceUuid.
- **password** (*string*) – Discovery’s password.
- **port** (*integer*) – Discovery’s port.
- **secure** (*boolean*) – Discovery’s secure.
- **username** (*string*) – Discovery’s username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_http_write_credentials(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global HTTP write credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_netconf_credentials(comments=None, credentialType=None, description=None, id=None,  
                           instanceTenantId=None, instanceUuid=None, netconfPort=None,  
                           headers=None, payload=None, active_validation=True,  
                           **request_parameters)
```

Updates global netconf credentials .

Parameters

- **comments** (*string*) – Discovery’s comments.
- **credentialType** (*string*) – Discovery’s credentialType. Available values are ‘GLOBAL’ and ‘APP’.
- **description** (*string*) – Discovery’s description.
- **id** (*string*) – Discovery’s id.
- **instanceTenantId** (*string*) – Discovery’s instanceTenantId.
- **instanceUuid** (*string*) – Discovery’s instanceUuid.
- **netconfPort** (*string*) – Discovery’s netconfPort.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_netconf_credentials(headers=None, payload=None, active_validation=True,  
                           **request_parameters)
```

Adds global netconf credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_snmp_read_community(*comments=None, credentialType=None, description=None, instanceUuid=None, readCommunity=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates global SNMP read community .

Parameters

- **comments** (*string*) – Discovery's Comments to identify the credential .
- **credentialType** (*string*) – Discovery's Credential type to identify the application that uses the credential . Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's Name/Description of the credential .
- **instanceUuid** (*string*) – Discovery's instanceUuid.
- **readCommunity** (*string*) – Discovery's SNMP read community. NO!\$DATA!\$ for no value change .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_snmp_read_community(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global SNMP read community .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_snmp_write_community(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global SNMP write community .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_snmp_write_community(*comments=None, credentialType=None, description=None, instanceUuid=None, writeCommunity=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates global SNMP write community .

Parameters

- **comments** (*string*) – Discovery's Comments to identify the credential .
- **credentialType** (*string*) – Discovery's Credential type to identify the application that uses the credential . Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's Name/Description of the credential .
- **instanceUuid** (*string*) – Discovery's instanceUuid.
- **writeCommunity** (*string*) – Discovery's SNMP write community. NO!\$DATA!\$ for no value change .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_snmpv3_credentials(authPassword=None, authType=None, comments=None,
                           credentialType=None, description=None, id=None, instanceTenantId=None,
                           instanceUuid=None, privacyPassword=None, privacyType=None,
                           snmpMode=None, username=None, headers=None, payload=None,
                           active_validation=True, **request_parameters)
```

Updates global SNMPv3 credential .

Parameters

- **authPassword** (*string*) – Discovery's authPassword.
- **authType** (*string*) – Discovery's authType. Available values are 'SHA' and 'MD5'.
- **comments** (*string*) – Discovery's comments.
- **credentialType** (*string*) – Discovery's credentialType. Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's description.
- **id** (*string*) – Discovery's id.
- **instanceTenantId** (*string*) – Discovery's instanceTenantId.
- **instanceUuid** (*string*) – Discovery's instanceUuid.
- **privacyPassword** (*string*) – Discovery's privacyPassword.
- **privacyType** (*string*) – Discovery's privacyType. Available values are 'DES' and 'AES128'.
- **snmpMode** (*string*) – Discovery's snmpMode. Available values are 'AUTHPRIV', 'AUTHNOPRIV' and 'NOAUTHNOPRIV'.
- **username** (*string*) – Discovery's username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_snmpv3_credentials(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global SNMPv3 credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_global_credentials_by_id(*global_credential_id, headers=None, **request_parameters*)

Deletes global credential for the given ID .

Parameters

- **global_credential_id** (*basestring*) – globalCredentialId path parameter. ID of global-credential .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_global_credentials(*global_credential_id*, *siteUuids=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Update global credential for network devices in site(s) .

Parameters

- **siteUuids** (*list*) – Discovery's siteUuids (list of strings).
- **global_credential_id** (*basestring*) – globalCredentialId path parameter. Global credential Uuid .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_credential_sub_type_by_credential_id(*id*, *headers=None*, ***request_parameters*)

Returns the credential sub type for the given Id .

Parameters

- **id** (*basestring*) – id path parameter. Global Credential ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_snmp_properties(*headers=None, **request_parameters*)

Returns SNMP properties .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_update_snmp_properties(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds SNMP properties .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

event_management

class EventManagement

Cisco DNA Center Event Management API (version: 2.3.3.0).

Wraps the DNA Center Event Management API and exposes the API as native Python methods that return native Python objects.

get_auditlog_parent_records(*category=None, context=None, description=None, device_id=None, domain=None, end_time=None, event_hierarchy=None, event_id=None, instance_id=None, is_system_events=None, limit=None, name=None, offset=None, order=None, severity=None, site_id=None, sort_by=None, source=None, start_time=None, sub_domain=None, user_id=None, headers=None, **request_parameters*)

Get Parent Audit Log Event instances from the Event-Hub .

Parameters

- **instance_id** (*basestring*) – instanceId query parameter. InstanceID of the Audit Log. .
- **name** (*basestring*) – name query parameter. Audit Log notification event name. .
- **event_id** (*basestring*) – eventId query parameter. Audit Log notification’s event ID. .
- **category** (*basestring*) – category query parameter. Audit Log notification’s event category. Supported values: INFO, WARN, ERROR, ALERT, TASK_PROGRESS, TASK_FAILURE, TASK_COMPLETE, COMMAND, QUERY, CONVERSATION .
- **severity** (*basestring*) – severity query parameter. Audit Log notification’s event severity. Supported values: 1, 2, 3, 4, 5. .
- **domain** (*basestring*) – domain query parameter. Audit Log notification’s event domain. .
- **sub_domain** (*basestring*) – subDomain query parameter. Audit Log notification’s event sub-domain. .
- **source** (*basestring*) – source query parameter. Audit Log notification’s event source. .
- **user_id** (*basestring*) – userId query parameter. Audit Log notification’s event userId. .
- **context** (*basestring*) – context query parameter. Audit Log notification’s event correlationId. .
- **event_hierarchy** (*basestring*) – eventHierarchy query parameter. Audit Log notification’s event eventHierarchy. Example: “US.CA.San Jose” OR “US.CA” OR “CA.San Jose” Delimiter for hierarchy separation is “.”. .
- **site_id** (*basestring*) – siteId query parameter. Audit Log notification’s siteId. .
- **device_id** (*basestring*) – deviceId query parameter. Audit Log notification’s deviceId. .
- **is_system_events** (*bool*) – isSystemEvents query parameter. Parameter to filter system generated audit-logs. .
- **description** (*basestring*) – description query parameter. String full/partial search (Provided input string is case insensitively matched for records). .
- **offset** (*basestring, int*) – offset query parameter. Position of a particular Audit Log record in the data. .

- **limit** (*basestring*, *int*) – limit query parameter. Number of Audit Log records to be returned per page. .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds since Epoch Eg. 1597950637211 (when provided endTime is mandatory) .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds since Epoch Eg. 1597961437211 (when provided startTime is mandatory) .
- **sort_by** (*basestring*) – sortBy query parameter. Sort the Audit Logs by certain fields. Supported values are event notification header attributes. .
- **order** (*basestring*) – order query parameter. Order of the sorted Audit Log records. Default value is desc by timestamp. Supported values: asc, desc. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_auditlog_summary(*category=None, context=None, description=None, device_id=None, domain=None, end_time=None, event_hierarchy=None, event_id=None, instance_id=None, is_parent_only=None, is_system_events=None, name=None, parent_instance_id=None, severity=None, site_id=None, source=None, start_time=None, sub_domain=None, user_id=None, headers=None, **request_parameters*)

Get Audit Log Summary from the Event-Hub .

Parameters

- **parent_instance_id** (*basestring*) – parentInstanceId query parameter. Parent Audit Log record's instanceID. .
- **is_parent_only** (*bool*) – isParentOnly query parameter. Parameter to filter parent only audit-logs. .
- **instance_id** (*basestring*) – instanceId query parameter. InstanceID of the Audit Log. .
- **name** (*basestring*) – name query parameter. Audit Log notification event name. .
- **event_id** (*basestring*) – eventId query parameter. Audit Log notification's event ID. .
- **category** (*basestring*) – category query parameter. Audit Log notification's event category. Supported values: INFO, WARN, ERROR, ALERT, TASK_PROGRESS, TASK_FAILURE, TASK_COMPLETE, COMMAND, QUERY, CONVERSATION .
- **severity** (*basestring*) – severity query parameter. Audit Log notification's event severity. Supported values: 1, 2, 3, 4, 5. .

- **domain** (*basestring*) – domain query parameter. Audit Log notification’s event domain. .
- **sub_domain** (*basestring*) – subDomain query parameter. Audit Log notification’s event sub-domain. .
- **source** (*basestring*) – source query parameter. Audit Log notification’s event source. .
- **user_id** (*basestring*) – userId query parameter. Audit Log notification’s event userId. .
- **context** (*basestring*) – context query parameter. Audit Log notification’s event correlationId. .
- **event_hierarchy** (*basestring*) – eventHierarchy query parameter. Audit Log notification’s event eventHierarchy. Example: “US.CA.San Jose” OR “US.CA” OR “CA.San Jose” Delimiter for hierarchy separation is “.”. .
- **site_id** (*basestring*) – siteId query parameter. Audit Log notification’s siteId. .
- **device_id** (*basestring*) – deviceId query parameter. Audit Log notification’s deviceId. .
- **is_system_events** (*bool*) – isSystemEvents query parameter. Parameter to filter system generated audit-logs. .
- **description** (*basestring*) – description query parameter. String full/partial search (Provided input string is case insensitively matched for records). .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds since Epoch Eg. 1597950637211 (when provided endTime is mandatory) .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds since Epoch Eg. 1597961437211 (when provided startTime is mandatory) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_auditlog_records(category=None, context=None, description=None, device_id=None,
                    domain=None, end_time=None, event_hierarchy=None, event_id=None,
                    instance_id=None, is_system_events=None, limit=None, name=None,
                    offset=None, order=None, parent_instance_id=None, severity=None,
                    site_id=None, sort_by=None, source=None, start_time=None, sub_domain=None,
                    user_id=None, headers=None, **request_parameters)
```

Get Audit Log Event instances from the Event-Hub .

Parameters

- **parent_instance_id** (*basestring*) – parentInstanceId query parameter. Parent Audit Log record’s instanceID. .
- **instance_id** (*basestring*) – instanceId query parameter. InstanceID of the Audit Log. .
- **name** (*basestring*) – name query parameter. Audit Log notification event name. .
- **event_id** (*basestring*) – eventId query parameter. Audit Log notification’s event ID. .
- **category** (*basestring*) – category query parameter. Audit Log notification’s event category. Supported values: INFO, WARN, ERROR, ALERT, TASK_PROGRESS, TASK_FAILURE, TASK_COMPLETE, COMMAND, QUERY, CONVERSATION .
- **severity** (*basestring*) – severity query parameter. Audit Log notification’s event severity. Supported values: 1, 2, 3, 4, 5. .
- **domain** (*basestring*) – domain query parameter. Audit Log notification’s event domain. .
- **sub_domain** (*basestring*) – subDomain query parameter. Audit Log notification’s event sub-domain. .
- **source** (*basestring*) – source query parameter. Audit Log notification’s event source. .
- **user_id** (*basestring*) – userId query parameter. Audit Log notification’s event userId. .
- **context** (*basestring*) – context query parameter. Audit Log notification’s event correlationId. .
- **event_hierarchy** (*basestring*) – eventHierarchy query parameter. Audit Log notification’s event eventHierarchy. Example: “US.CA.San Jose” OR “US.CA” OR “CA.San Jose” Delimiter for hierarchy separation is “.”. .
- **site_id** (*basestring*) – siteId query parameter. Audit Log notification’s siteId. .
- **device_id** (*basestring*) – deviceId query parameter. Audit Log notification’s deviceId. .
- **is_system_events** (*bool*) – isSystemEvents query parameter. Parameter to filter system generated audit-logs. .
- **description** (*basestring*) – description query parameter. String full/partial search (Provided input string is case insensitively matched for records). .
- **offset** (*basestring*, *int*) – offset query parameter. Position of a particular Audit Log record in the data. .
- **limit** (*basestring*, *int*) – limit query parameter. Number of Audit Log records to be returned per page. .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds since Epoch Eg. 1597950637211 (when provided endTime is mandatory) .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds since Epoch Eg. 1597961437211 (when provided startTime is mandatory) .
- **sort_by** (*basestring*) – sortBy query parameter. Sort the Audit Logs by certain fields. Supported values are event notification header attributes. .
- **order** (*basestring*) – order query parameter. Order of the sorted Audit Log records. Default value is desc by timestamp. Supported values: asc, desc. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_status_api_for_events(*execution_id*, *headers=None*, ***request_parameters*)

Get the Status of events API calls with provided executionId as mandatory path parameter .

Parameters

- **execution_id** (*basestring*) – executionId path parameter. Execution ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_email_destination(*emailConfigId=None*, *fromEmail=None*, *primarySMTPConfig=None*, *secondarySMTPConfig=None*, *subject=None*, *toEmail=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Update Email Destination .

Parameters

- **emailConfigId** (*string*) – Event Management's Required only for update email configuration .
- **fromEmail** (*string*) – Event Management's From Email.
- **primarySMTPConfig** (*object*) – Event Management's primarySMTPConfig.
- **secondarySMTPConfig** (*object*) – Event Management's secondarySMTPConfig.
- **subject** (*string*) – Event Management's Subject.
- **toEmail** (*string*) – Event Management's To Email.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_email_destination(*emailConfigId=None, fromEmail=None, primarySMTPConfig=None, secondarySMTPConfig=None, subject=None, toEmail=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Create Email Destination .

Parameters

- **emailConfigId** (*string*) – Event Management's Required only for update email configuration .
- **fromEmail** (*string*) – Event Management's From Email.
- **primarySMTPConfig** (*object*) – Event Management's primarySMTPConfig.
- **secondarySMTPConfig** (*object*) – Event Management's secondarySMTPConfig.
- **subject** (*string*) – Event Management's Subject.
- **toEmail** (*string*) – Event Management's To Email.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_notifications(category=None, domain=None, end_time=None, event_ids=None, limit=None,
                  namespace=None, offset=None, order=None, severity=None, site_id=None,
                  sort_by=None, source=None, start_time=None, sub_domain=None, tags=None,
                  type=None, headers=None, **request_parameters)
```

Get the list of Published Notifications .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. The registered EventId should be provided .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds .
- **category** (*basestring*) – category query parameter.
- **type** (*basestring*) – type query parameter.
- **severity** (*basestring*) – severity query parameter.
- **domain** (*basestring*) – domain query parameter.
- **sub_domain** (*basestring*) – subDomain query parameter. Sub Domain .
- **source** (*basestring*) – source query parameter.
- **offset** (*basestring*, *int*) – offset query parameter. Start Offset .
- **limit** (*basestring*, *int*) – limit query parameter. # of records .
- **sort_by** (*basestring*) – sortBy query parameter. Sort By column .
- **order** (*basestring*) – order query parameter. Ascending/Descending order [asc/desc] .
- **tags** (*basestring*) – tags query parameter.
- **namespace** (*basestring*) – namespace query parameter.
- **site_id** (*basestring*) – siteId query parameter. Site Id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
count_of_notifications(category=None, domain=None, end_time=None, event_ids=None,
                        severity=None, source=None, start_time=None, sub_domain=None, type=None,
                        headers=None, **request_parameters)
```

Get the Count of Published Notifications .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. The registered EventId should be provided .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds .
- **category** (*basestring*) – category query parameter.
- **type** (*basestring*) – type query parameter.
- **severity** (*basestring*) – severity query parameter.
- **domain** (*basestring*) – domain query parameter.
- **sub_domain** (*basestring*) – subDomain query parameter. Sub Domain .
- **source** (*basestring*) – source query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_event_subscriptions(*event_ids=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of Subscriptions's based on provided offset and limit (Deprecated) .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of subscriptions related to the respective eventId .
- **offset** (*basestring, int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*basestring, int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type*list***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_event_subscriptions(*subscriptions*, *headers=None*, ***request_parameters*)

Delete EventSubscriptions .

Parameters

- **subscriptions** (*basestring*) – subscriptions query parameter. List of EventSubscriptionId's for removal .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_event_subscriptions(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Update SubscriptionEndpoint to list of registered events(Deprecated) .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

create_event_subscriptions(*headers=None, payload=None, active_validation=True, **request_parameters*)

Subscribe SubscriptionEndpoint to list of registered events (Deprecated) .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_email_subscription_details(*instance_id=None, limit=None, name=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of subscription details for specified connectorType .

Parameters

- **name** (*basestring*) – name query parameter. Name of the specific configuration .
- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the specific configuration .
- **offset** (*basestring, int*) – offset query parameter. The number of Email Subscription detail's to offset in the resultset whose default value 0 .
- **limit** (*basestring, int*) – limit query parameter. The number of Email Subscription detail's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_rest_webhook_subscription_details(*instance_id=None, limit=None, name=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of subscription details for specified connectorType .

Parameters

- **name** (*basestring*) – name query parameter. Name of the specific configuration .
- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the specific configuration .
- **offset** (*basestring, int*) – offset query parameter. The number of Rest/Webhook Subscription detail's to offset in the resultset whose default value 0 .
- **limit** (*basestring, int*) – limit query parameter. The number of Rest/Webhook Subscription detail's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_syslog_subscription_details(*instance_id=None, limit=None, name=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of subscription details for specified connectorType .

Parameters

- **name** (*basestring*) – name query parameter. Name of the specific configuration .
- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the specific configuration .
- **offset** (*basestring, int*) – offset query parameter. The number of Syslog Subscription detail's to offset in the resultset whose default value 0 .
- **limit** (*basestring, int*) – limit query parameter. The number of Syslog Subscription detail's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .

- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

count_of_event_subscriptions(*event_ids*, *headers=None*, ***request_parameters*)

Returns the Count of EventSubscriptions .

Parameters

- **event_ids** (*basestring*) – eventIds query parameter. List of subscriptions related to the respective eventIds .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_email_event_subscription(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Create Email Subscription Endpoint for list of registered events. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_email_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update Email Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_email_event_subscriptions(*category=None, domain=None, event_ids=None, limit=None, name=None, offset=None, order=None, sort_by=None, sub_domain=None, type=None, headers=None, **request_parameters*)

Gets the list of email Subscriptions's based on provided query params .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of email subscriptions related to the respective eventIds (Comma separated event ids) .
- **offset** (*basestring, int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*basestring, int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.

- **domain** (*basestring*) – domain query parameter. List of email subscriptions related to the respective domain .
- **sub_domain** (*basestring*) – subDomain query parameter. List of email subscriptions related to the respective sub-domain .
- **category** (*basestring*) – category query parameter. List of email subscriptions related to the respective category .
- **type** (*basestring*) – type query parameter. List of email subscriptions related to the respective type .
- **name** (*basestring*) – name query parameter. List of email subscriptions related to the respective name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_rest_webhook_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create Rest/Webhook Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_rest_webhook_event_subscriptions(category=None, domain=None, event_ids=None, limit=None,  
                                     name=None, offset=None, order=None, sort_by=None,  
                                     sub_domain=None, type=None, headers=None,  
                                     **request_parameters)
```

Gets the list of Rest/Webhook Subscriptions's based on provided query params .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of subscriptions related to the respective eventId (Comma separated event ids) .
- **offset** (*basestring*, *int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*basestring*, *int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **domain** (*basestring*) – domain query parameter. List of subscriptions related to the respective domain .
- **sub_domain** (*basestring*) – subDomain query parameter. List of subscriptions related to the respective sub- domain .
- **category** (*basestring*) – category query parameter. List of subscriptions related to the respective category .
- **type** (*basestring*) – type query parameter. List of subscriptions related to the respective type .
- **name** (*basestring*) – name query parameter. List of subscriptions related to the respective name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_rest_webhook_event_subscription(headers=None, payload=None, active_validation=True,  
                                       **request_parameters)
```

Update Rest/Webhook Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.

- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_syslog_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update Syslog Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_syslog_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create Syslog Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_syslog_event_subscriptions(*category=None, domain=None, event_ids=None, limit=None, name=None, offset=None, order=None, sort_by=None, sub_domain=None, type=None, headers=None, **request_parameters*)

Gets the list of Syslog Subscriptions's based on provided offset and limit .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of subscriptions related to the respective eventId (Comma separated event ids) .
- **offset** (*basestring, int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*basestring, int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **domain** (*basestring*) – domain query parameter. List of subscriptions related to the respective domain .
- **sub_domain** (*basestring*) – subDomain query parameter. List of subscriptions related to the respective sub- domain .
- **category** (*basestring*) – category query parameter. List of subscriptions related to the respective category .
- **type** (*basestring*) – type query parameter. List of subscriptions related to the respective type .
- **name** (*basestring*) – name query parameter. List of subscriptions related to the respective name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_syslog_destination(*configId=None, description=None, host=None, name=None, port=None, protocol=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Update Syslog Destination .

Parameters

- **configId** (*string*) – Event Management’s Required only for update syslog configuration .
- **description** (*string*) – Event Management’s Description.
- **host** (*string*) – Event Management’s Host.
- **name** (*string*) – Event Management’s Name.
- **port** (*string*) – Event Management’s Port.
- **protocol** (*string*) – Event Management’s Protocol. Available values are ‘UDP’ and ‘TCP’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_syslog_destination(*configId=None, description=None, host=None, name=None, port=None, protocol=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Create Syslog Destination .

Parameters

- **configId** (*string*) – Event Management’s Required only for update syslog configuration .
- **description** (*string*) – Event Management’s Description.
- **host** (*string*) – Event Management’s Host.
- **name** (*string*) – Event Management’s Name.

- **port** (*string*) – Event Management’s Port.
- **protocol** (*string*) – Event Management’s Protocol. Available values are ‘UDP’ and ‘TCP’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_webhook_destination(*description=None, headers=None, method=None, name=None, trustCert=None, url=None, webhookId=None, payload=None, active_validation=True, **request_parameters*)

Create Webhook Destination .

Parameters

- **description** (*string*) – Event Management’s Description.
- **headers** (*dict*) – Event Management’s headers (list of objects).
- **method** (*string*) – Event Management’s Method. Available values are ‘POST’ and ‘PUT’.
- **name** (*string*) – Event Management’s Name.
- **trustCert** (*boolean*) – Event Management’s Trust Cert.
- **url** (*string*) – Event Management’s Url.
- **webhookId** (*string*) – Event Management’s Required only for update webhook configuration .
- **headers** – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_webhook_destination(*description=None, headers=None, method=None, name=None, trustCert=None, url=None, webhookId=None, payload=None, active_validation=True, **request_parameters*)

Update Webhook Destination .

Parameters

- **description** (*string*) – Event Management’s Description.
- **headers** (*dict*) – Event Management’s headers (list of objects).
- **method** (*string*) – Event Management’s Method. Available values are ‘POST’ and ‘PUT’.
- **name** (*string*) – Event Management’s Name.
- **trustCert** (*boolean*) – Event Management’s Trust Cert.
- **url** (*string*) – Event Management’s Url.
- **webhookId** (*string*) – Event Management’s Required only for update webhook configuration .
- **headers** – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_events(*tags, event_id=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of registered Events with provided eventIds or tags as mandatory .

Parameters

- **event_id** (*basestring*) – eventId query parameter. The registered EventId should be provided .
- **tags** (*basestring*) – tags query parameter. The registered Tags should be provided .
- **offset** (*basestring, int*) – offset query parameter. The number of Registries to offset in the resultset whose default value 0 .

- **limit** (*basestring*, *int*) – limit query parameter. The number of Registries to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

count_of_events(*tags*, *event_id=None*, *headers=None*, ***request_parameters*)

Get the count of registered events with provided eventIds or tags as mandatory .

Parameters

- **event_id** (*basestring*) – eventId query parameter. The registered EventId should be provided .
- **tags** (*basestring*) – tags query parameter. The registered Tags should be provided .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_eventartifacts(*event_ids=None*, *limit=None*, *offset=None*, *order=None*, *search=None*, *sort_by=None*, *tags=None*, *headers=None*, ***request_parameters*)

Gets the list of artifacts based on provided offset and limit .

Parameters

- **event_ids** (*basestring*) – eventIds query parameter. List of eventIds .
- **tags** (*basestring*) – tags query parameter. Tags defined .

- **offset** (*basestring*, *int*) – offset query parameter. Record start offset .
- **limit** (*basestring*, *int*) – limit query parameter. # of records to return in result set .
- **sort_by** (*basestring*) – sortBy query parameter. Sort by field .
- **order** (*basestring*) – order query parameter. sorting order (asc/desc) .
- **search** (*basestring*) – search query parameter. find matches in name, description, eventId, type, category .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

eventartifact_count(*headers=None*, ***request_parameters*)

Get the count of registered event artifacts with provided eventIds or tags as mandatory .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_connector_types(*headers=None*, ***request_parameters*)

Get the list of connector types .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

`list`

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

fabric_wireless**class FabricWireless**

Cisco DNA Center Fabric Wireless API (version: 2.3.3.0).

Wraps the DNA Center Fabric Wireless API and exposes the API as native Python methods that return native Python objects.

add_ssid_to_ip_pool_mapping(*scalableGroupName=None, siteNameHierarchy=None, ssidNames=None, vlanName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Add SSID to IP Pool Mapping. .

Parameters

- **scalableGroupName** (*string*) – Fabric Wireless's Scalable Group Name .
- **siteNameHierarchy** (*string*) – Fabric Wireless's Site Name Hierarchy .
- **ssidNames** (*list*) – Fabric Wireless's List of SSIDs (list of strings).
- **vlanName** (*string*) – Fabric Wireless's VLAN Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

`list`

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_ssid_to_ip_pool_mapping2(*scalableGroupName=None, siteNameHierarchy=None, ssidNames=None, vlanName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Update SSID to IP Pool Mapping. .

Parameters

- **scalableGroupName** (*string*) – Fabric Wireless’s Scalable Group Name .
- **siteNameHierarchy** (*string*) – Fabric Wireless’s Site Name Hierarchy .
- **ssidNames** (*list*) – Fabric Wireless’s List of SSIDs (list of strings).
- **vlanName** (*string*) – Fabric Wireless’s VLAN Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_ssid_to_ip_pool_mapping(*scalableGroupName=None, siteNameHierarchy=None, ssidNames=None, vlanName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

get_ssid_to_ip_pool_mapping(*site_name_hierarchy, vlan_name, headers=None, **request_parameters*)

Get SSID to IP Pool Mapping .

Parameters

- **vlan_name** (*basestring*) – vlanName query parameter. VLAN Name .
- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. Site Name Heirarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

remove_w_l_c_from_fabric_domain(*device_ipaddress*, *headers=None*, ***request_parameters*)

Remove WLC from Fabric Domain .

Parameters

- **device_ipaddress** (*basestring*) – deviceIPAddress query parameter. Device Management IP Address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_w_l_c_to_fabric_domain(*deviceName=None*, *siteNameHierarchy=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add WLC to Fabric Domain .

Parameters

- **deviceName** (*string*) – Fabric Wireless's EWLC Device Name .
- **siteNameHierarchy** (*string*) – Fabric Wireless's Site Name Hierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

file**class File**

Cisco DNA Center File API (version: 2.3.3.0).

Wraps the DNA Center File API and exposes the API as native Python methods that return native Python objects.

get_list_of_available_namespaces(*headers=None, **request_parameters*)

Returns list of available namespaces .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_list_of_files(*name_space, headers=None, **request_parameters*)

Returns list of files under a specific namespace .

Parameters

- **name_space** (*basestring*) – nameSpace path parameter. A listing of fileId's .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

download_a_file_by_fileid(*file_id, dirpath=None, save_file=None, filename=None, headers=None, **request_parameters*)

Downloads a file specified by fileId .

Parameters

- **file_id** (*basestring*) – fileId path parameter. File Identification number .
- **dirpath** (*basestring*) – Directory absolute path. Defaults to `os.getcwd()`.
- **save_file** (*bool*) – Enable or disable automatic file creation of raw response.
- **filename** (*basestring*) – The filename used to save the download file.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

The DownloadResponse wrapper. Wraps the `urllib3.response.HTTPResponse`. For more information check the [urllib3 documentation](#)

Return type

DownloadResponse

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.
- **DownloadFailure** – If was not able to download the raw
- **response to a file.** –

upload_file(*multipart_fields*, *multipart_monitor_callback*, *name_space*, *headers=None*, ***request_parameters*)

Uploads a new file within a specific nameSpace .

The following code gives an example of the *multipart_fields*.

```
multipart_fields={'file': ('file.zip', open('file.zip', 'rb'))}
multipart_fields={'file': ('file.txt', open('file.txt', 'rb'),
    'text/plain',
    {'X-My-Header': 'my-value'})}
multipart_fields=[('images', ('foo.png', open('foo.png', 'rb'),
    'image/png')),
    ('images', ('bar.png', open('bar.png', 'rb'), 'image/png'))]
```

The following example demonstrates how to use *multipart_monitor_callback=create_callback* to create a progress bar using *clint*.

```
from clint.textui.progress import Bar
def create_callback(encoder):
    encoder_len = encoder.len
    bar = Bar(expected_size=encoder_len,
        filled_char="=")
    def callback(monitor):
        bar.show(monitor.bytes_read)
    return callback
```

Parameters

- **name_space** (*basestring*) – nameSpace path parameter.

- **multipart_fields** (*dict*) – Fields from which to create a multipart/form-data body.
- **multipart_monitor_callback** (*function*) – function used to monitor the progress of the upload.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

health_and_performance

class HealthAndPerformance

Cisco DNA Center Health and Performance API (version: 2.3.3.0).

Wraps the DNA Center Health and Performance API and exposes the API as native Python methods that return native Python objects.

system_health(*domain=None, limit=None, offset=None, subdomain=None, summary=None, headers=None, **request_parameters*)

This API retrieves the latest system events .

Parameters

- **summary** (*bool*) – summary query parameter. Fetch the latest high severity event .
- **domain** (*basestring*) – domain query parameter. Fetch system events with this domain. Possible values of domain are listed here : /dna/platform/app/consumer-portal/developer-toolkit/events .
- **subdomain** (*basestring*) – subdomain query parameter. Fetch system events with this subdomain. Possible values of subdomain are listed here : /dna/platform/app/consumer-portal/developer- toolkit/events .
- **limit** (*basestring, int*) – limit query parameter.
- **offset** (*basestring, int*) – offset query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

system_health_count(*domain=None, subdomain=None, headers=None, **request_parameters*)

This API gives the count of the latest system events .

Parameters

- **domain** (*basestring*) – domain query parameter. Fetch system events with this domain. Possible values of domain are listed here : /dna/platform/app/consumer-portal/developer-toolkit/events .
- **subdomain** (*basestring*) – subdomain query parameter. Fetch system events with this subdomain. Possible values of subdomain are listed here : /dna/platform/app/consumer-portal/developer-toolkit/events .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

system_performance(*end_time=None, function=None, kpi=None, start_time=None, headers=None, **request_parameters*)

This API gives the aggregated performance indicators. The data can be retrieved for the last 3 months. .

Parameters

- **kpi** (*basestring*) – kpi query parameter. Valid values: cpu,memory,network .
- **function** (*basestring*) – function query parameter. Valid values: sum,average,max .
- **start_time** (*int*) – startTime query parameter. This is the epoch start time in milliseconds from which performance indicator need to be fetched .
- **end_time** (*int*) – endTime query parameter. This is the epoch end time in milliseconds upto which performance indicator need to be fetched .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

system_performance_historical(*end_time=None, kpi=None, start_time=None, headers=None, **request_parameters*)

This API retrieves the historical performance indicators . The data can be retrieved for the last 3 months. .

Parameters

- **kpi** (*basestring*) – kpi query parameter. Fetch historical data for this kpi. Valid values: cpu,memory,network .
- **start_time** (*int*) – startTime query parameter. This is the epoch start time in milliseconds from which performance indicator need to be fetched .
- **end_time** (*int*) – endTime query parameter. This is the epoch end time in milliseconds upto which performance indicator need to be fetched .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

itsm**class Itsm**

Cisco DNA Center ITSM API (version: 2.3.3.0).

Wraps the DNA Center ITSM API and exposes the API as native Python methods that return native Python objects.

get_cmdb_sync_status(*date=None, status=None, headers=None, **request_parameters*)

This API allows to retrieve the detail of CMDB sync status.It accepts two query parameter “status”,“date”.The supported values for status field are “Success”,“Failed”,“Unknown” and date field should

be in “YYYY-MM-DD” format. By default all the cmdb sync status will be send as response and based on the query parameter filtered detail will be send as response. .

Parameters

- **status** (*basestring*) – status query parameter. Supported values are “Success”, “Failed” and “Unknown”. Providing other values will result in all the available sync job status. .
- **date** (*basestring*) – date query parameter. Provide date in “YYYY-MM-DD” format .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_failed_itsm_events(*instance_id=None, headers=None, **request_parameters*)

Used to retrieve the list of integration events that failed to create tickets in ITSM .

Parameters

- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the failed event as in the Runtime Dashboard .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

retry_integration_events(*headers=None, payload=None, active_validation=True, **request_parameters*)

Allows retry of multiple failed ITSM event instances. The retry request payload can be given as a list of strings: [“instance1”, “instance2”, “instance3”, ...] A minimum of one instance Id is mandatory. The list of failed event instance Ids can be retrieved using the ‘Get Failed ITSM Events’ API in the ‘instanceId’ attribute. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

issues

class Issues

Cisco DNA Center Issues API (version: 2.3.3.0).

Wraps the DNA Center Issues API and exposes the API as native Python methods that return native Python objects.

get_issue_enrichment_details(*headers=None, **request_parameters*)

Enriches a given network issue context (an issue id or end user's Mac Address) with details about the issue(s), impacted hosts and suggested actions for remediation .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

issues(*ai_driven=None, device_id=None, end_time=None, issue_status=None, mac_address=None, priority=None, site_id=None, start_time=None, headers=None, **request_parameters*)

Intent API to get a list of global issues, issues for a specific device, or issue for a specific client device's MAC address. .

Parameters

- **start_time** (*int*) – startTime query parameter. Starting epoch time in milliseconds of query time window .
- **end_time** (*int*) – endTime query parameter. Ending epoch time in milliseconds of query time window .
- **site_id** (*basestring*) – siteId query parameter. Assurance UUID value of the site in the issue content .
- **device_id** (*basestring*) – deviceId query parameter. Assurance UUID value of the device in the issue content .
- **mac_address** (*basestring*) – macAddress query parameter. Client's device MAC address of the issue (format xx:xx:xx:xx:xx:xx) .
- **priority** (*basestring*) – priority query parameter. The issue's priority value (One of P1, P2, P3, or P4)(Use only when macAddress and deviceId are not provided) .
- **ai_driven** (*basestring*) – aiDriven query parameter. The issue's AI driven value (Yes or No)(Use only when macAddress and deviceId are not provided) .
- **issue_status** (*basestring*) – issueStatus query parameter. The issue's status value (One of ACTIVE, IGNORED, RESOLVED) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

lan_automation

class LanAutomation

Cisco DNA Center LAN Automation API (version: 2.3.3.0).

Wraps the DNA Center LAN Automation API and exposes the API as native Python methods that return native Python objects.

lan_automation(*headers=None, payload=None, active_validation=True, **request_parameters*)

Invoke this API to start LAN Automation for the given site. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

lan_automation_session_count(*headers=None, **request_parameters*)

Invoke this API to get the total count of LAN Automation sessions. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

lan_automation_log(*limit=None, offset=None, headers=None, **request_parameters*)

Invoke this API to get the LAN Automation session logs. .

Parameters

- **offset** (*basestring, int*) – offset query parameter. Starting index of the LAN Automation session. Minimum value is 1. .
- **limit** (*basestring, int*) – limit query parameter. Number of LAN Automation sessions to be retrieved. Limit value can range between 1 to 10. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

lan_automation_log_by_id(*id*, *headers=None*, ***request_parameters*)

Invoke this API to get the LAN Automation session logs based on the given LAN Automation session id. .

Parameters

- **id** (*basestring*) – id path parameter. LAN Automation session identifier. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

lan_automation_status(*limit=None*, *offset=None*, *headers=None*, ***request_parameters*)

Invoke this API to get the LAN Automation session status. .

Parameters

- **offset** (*basestring*, *int*) – offset query parameter. Starting index of the LAN Automation session. Minimum value is 1. .
- **limit** (*basestring*, *int*) – limit query parameter. Number of LAN Automation sessions to be retrieved. Limit value can range between 1 to 10. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

lan_automation_status_by_id(*id*, *headers=None*, ***request_parameters*)

Invoke this API to get the LAN Automation session status based on the given Lan Automation session id. .

Parameters

- **id** (*basestring*) – id path parameter. LAN Automation session identifier. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

lan_automation_stop(*id*, *headers=None*, ***request_parameters*)

Invoke this API to stop LAN Automation for the given site. .

Parameters

- **id** (*basestring*) – id path parameter. LAN Automation id can be obtained from /dna/intent/api/v1/lan-automation/status. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

licenses

class Licenses

Cisco DNA Center Licenses API (version: 2.3.3.0).

Wraps the DNA Center Licenses API and exposes the API as native Python methods that return native Python objects.

device_count_details(*device_type=None, dna_level=None, registration_status=None, smart_account_id=None, virtual_account_name=None, headers=None, **request_parameters*)

Get total number of managed device(s). .

Parameters

- **device_type** (*basestring*) – device_type query parameter. Type of device .
- **registration_status** (*basestring*) – registration_status query parameter. Smart license registration status of device .
- **dna_level** (*basestring*) – dna_level query parameter. Device Cisco DNA license level .
- **virtual_account_name** (*basestring*) – virtual_account_name query parameter. Name of virtual account .
- **smart_account_id** (*basestring*) – smart_account_id query parameter. Id of smart account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_license_summary(*limit, order, page_number, device_type=None, device_uuid=None, dna_level=None, registration_status=None, smart_account_id=None, sort_by=None, virtual_account_name=None, headers=None, **request_parameters*)

Show license summary of device(s). .

Parameters

- **page_number** (*int*) – page_number query parameter. Page number of response .
- **order** (*basestring*) – order query parameter. Sorting order .
- **sort_by** (*basestring*) – sort_by query parameter. Sort result by field .

- **dna_level** (*basestring*) – dna_level query parameter. Device Cisco DNA license level .
- **device_type** (*basestring*) – device_type query parameter. Type of device .
- **limit** (*basestring*, *int*) – limit query parameter.
- **registration_status** (*basestring*) – registration_status query parameter. Smart license registration status of device .
- **virtual_account_name** (*basestring*) – virtual_account_name query parameter. Name of virtual account .
- **smart_account_id** (*int*) – smart_account_id query parameter. Id of smart account .
- **device_uuid** (*basestring*) – device_uuid query parameter. Id of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_license_details(*device_uuid*, *headers=None*, ***request_parameters*)

Get detailed license information of a device. .

Parameters

- **device_uuid** (*basestring*) – device_uuid path parameter. Id of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_deregistration(*device_uuids=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Deregister device(s) from CSSM(Cisco Smart Software Manager). .

Parameters

- **device_uuids** (*list*) – Licenses’s Comma separated device ids (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

device_registration(*virtual_account_name, device_uuids=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Register device(s) in CSSM(Cisco Smart Software Manager). .

Parameters

- **device_uuids** (*list*) – Licenses’s Comma separated device ids (list of strings).
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of virtual account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

change_virtual_account(*smart_account_id*, *virtual_account_name*, *device_uuids=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Transfer device(s) from one virtual account to another within same smart account. .

Parameters

- **device_uuids** (*list*) – Licenses’s Comma separated device ids (list of strings).
- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of target virtual account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

virtual_account_details(*smart_account_id*, *headers=None*, ***request_parameters*)

Get virtual account details of a smart account. .

Parameters

- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

smart_account_details(*headers=None, **request_parameters*)

Get detail of all smart accounts. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

license_term_details(*device_type, smart_account_id, virtual_account_name, headers=None, **request_parameters*)

Get license term details. .

Parameters

- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of virtual account. Putting “All” will give license term detail for all virtual accounts. .
- **device_type** (*basestring*) – device_type query parameter. Type of device like router, switch, wireless or ise .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

license_usage_details(*device_type, smart_account_id, virtual_account_name, headers=None, **request_parameters*)

Get count of purchased and in use Cisco DNA and Network licenses. .

Parameters

- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of virtual account. Putting “All” will give license usage detail for all virtual accounts. .
- **device_type** (*basestring*) – device_type query parameter. Type of device like router, switch, wireless or ise .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

network_settings**class NetworkSettings**

Cisco DNA Center Network Settings API (version: 2.3.3.0).

Wraps the DNA Center Network Settings API and exposes the API as native Python methods that return native Python objects.

assign_credential_to_site(*site_id*, *cliId=None*, *httpRead=None*, *httpWrite=None*, *snmpV2ReadId=None*, *snmpV2WriteId=None*, *snmpV3Id=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Assign Device Credential To Site .

Parameters

- **cliId** (*string*) – Network Settings’s Cli Id.
- **httpRead** (*string*) – Network Settings’s Http Read.
- **httpWrite** (*string*) – Network Settings’s Http Write.
- **snmpV2ReadId** (*string*) – Network Settings’s Snmp V2 Read Id.
- **snmpV2WriteId** (*string*) – Network Settings’s Snmp V2 Write Id.
- **snmpV3Id** (*string*) – Network Settings’s Snmp V3 Id.
- **site_id** (*basestring*) – siteId path parameter. site id to assign credential. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_device_credentials(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to create device credentials. .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_device_credentials(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to update device credentials. .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_credential_details(*site_id=None, headers=None, **request_parameters*)

API to get device credential details. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Site id to retrieve the credential details associated with the site. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_device_credential(*id, headers=None, **request_parameters*)

Delete device credential. .

Parameters

- **id** (*basestring*) – id path parameter. global credential id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_global_pool(*limit=None, offset=None, headers=None, **request_parameters*)

API to get global pool. .

Parameters

- **offset** (*basestring, int*) – offset query parameter. offset/starting row .
- **limit** (*basestring, int*) – limit query parameter. No of Global Pools to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_global_pool(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to update global pool .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_global_pool(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to create global pool. .

Parameters

- **settings** (*object*) – Network Settings’s settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_global_ip_pool(*id, headers=None, **request_parameters*)

API to delete global IP pool. .

Parameters

- **id** (*basestring*) – id path parameter. global pool id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_network(*site_id=None, headers=None, **request_parameters*)

API to get DHCP and DNS center server details. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Site id to get the network settings associated with the site. .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_network(*site_id*, *settings=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

API to create a network for DHCP, Syslog, SNMP, NTP, Network AAA, Client and Endpoint AAA, and/or DNS center server settings. .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **site_id** (*basestring*) – siteId path parameter. Site id to which site details to associate with the network settings. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_network(*site_id*, *settings=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

API to update network for DHCP and DNS center server settings. .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **site_id** (*basestring*) – siteId path parameter. Site id to update the network settings which is associated with the site .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_reserve_ip_subpool(*limit=None, offset=None, site_id=None, headers=None, **request_parameters*)

API to get the ip subpool info. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. site id to get the reserve ip associated with the site .
- **offset** (*basestring, int*) – offset query parameter. offset/starting row .
- **limit** (*basestring, int*) – limit query parameter. No of Global Pools to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

release_reserve_ip_subpool(*id, headers=None, **request_parameters*)

API to delete the reserved ip subpool .

Parameters

- **id** (*basestring*) – id path parameter. Id of reserve ip subpool to be deleted. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
reserve_ip_subpool(site_id, ipv4DhcpServers=None, ipv4DnsServers=None, ipv4GateWay=None,
                    ipv4GlobalPool=None, ipv4Prefix=None, ipv4PrefixLength=None, ipv4Subnet=None,
                    ipv4TotalHost=None, ipv6AddressSpace=None, ipv6DhcpServers=None,
                    ipv6DnsServers=None, ipv6GateWay=None, ipv6GlobalPool=None,
                    ipv6Prefix=None, ipv6PrefixLength=None, ipv6Subnet=None, ipv6TotalHost=None,
                    name=None, slaacSupport=None, type=None, headers=None, payload=None,
                    active_validation=True, **request_parameters)
```

API to reserve an ip subpool from the global pool .

Parameters

- **ipv4DhcpServers** (*list*) – Network Settings's IPv4 input for dhcp server ip example: 1.1.1.1 (list of strings).
- **ipv4DnsServers** (*list*) – Network Settings's IPv4 input for dns server ip example: 4.4.4.4 (list of strings).
- **ipv4GateWay** (*string*) – Network Settings's Gateway ip address details, example: 175.175.0.1 .
- **ipv4GlobalPool** (*string*) – Network Settings's IP v4 Global pool address with cidr, example: 175.175.0.0/16 .
- **ipv4Prefix** (*boolean*) – Network Settings's IPv4 prefix value is true, the ip4 prefix length input field is enabled , if it is false ipv4 total Host input is enable .
- **ipv4PrefixLength** (*integer*) – Network Settings's The ipv4 prefix length is required when ipv4prefix value is true. .
- **ipv4Subnet** (*string*) – Network Settings's IPv4 Subnet address, example: 175.175.0.0 .
- **ipv4TotalHost** (*integer*) – Network Settings's IPv4 total host is required when ipv4prefix value is false. .
- **ipv6AddressSpace** (*boolean*) – Network Settings's If the value is false only ipv4 input are required, otherwise both ipv6 and ipv4 are required .
- **ipv6DhcpServers** (*list*) – Network Settings's IPv6 format dhcp server as input example : 2001:db8::1234 (list of strings).
- **ipv6DnsServers** (*list*) – Network Settings's IPv6 format dns server input example: 2001:db8::1234 (list of strings).
- **ipv6GateWay** (*string*) – Network Settings's Gateway ip address details, example: 2001:db8:85a3:0:100::1 .
- **ipv6GlobalPool** (*string*) – Network Settings's IPv6 Global pool address with cidr this is required when Ipv6AddressSpace value is true, example: 2001:db8:85a3::/64 .

- **ipv6Prefix** (*boolean*) – Network Settings’s Ipv6 prefix value is true, the ip6 prefix length input field is enabled , if it is false ipv6 total Host input is enable .
- **ipv6PrefixLength** (*integer*) – Network Settings’s IPv6 prefix length is required when the ipv6prefix value is true .
- **ipv6Subnet** (*string*) – Network Settings’s IPv6 Subnet address, example :2001:db8:85a3:0:100:: .
- **ipv6TotalHost** (*integer*) – Network Settings’s IPv6 total host is required when ipv6prefix value is false. .
- **name** (*string*) – Network Settings’s Name of the reserve ip sub pool .
- **slaacSupport** (*boolean*) – Network Settings’s Slaac Support.
- **type** (*string*) – Network Settings’s Type of the reserve ip sub pool . Available values are ‘Generic’, ‘LAN’, ‘WAN’, ‘management’ and ‘service’.
- **site_id** (*basestring*) – siteId path parameter. Site id to reserve the ip sub pool. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_reserve_ip_subpool(id, site_id, ipv4DhcpServers=None, ipv4DnsServers=None,
                          ipv4GateWay=None, ipv6AddressSpace=None, ipv6DhcpServers=None,
                          ipv6DnsServers=None, ipv6GateWay=None, ipv6GlobalPool=None,
                          ipv6Prefix=None, ipv6PrefixLength=None, ipv6Subnet=None,
                          ipv6TotalHost=None, name=None, slaacSupport=None, headers=None,
                          payload=None, active_validation=True, **request_parameters)
```

API to update ip subpool from the global pool .

Parameters

- **ipv4DhcpServers** (*list*) – Network Settings’s IPv4 input for dhcp server ip example: 1.1.1.1 (list of strings).
- **ipv4DnsServers** (*list*) – Network Settings’s IPv4 input for dns server ip example: 4.4.4.4 (list of strings).
- **ipv4GateWay** (*string*) – Network Settings’s Ipv4 Gate Way.
- **ipv6AddressSpace** (*boolean*) – Network Settings’s If the value is false only ipv4 input are required, otherwise both ipv6 and ipv4 are required .

- **ipv6DhcpServers** (*list*) – Network Settings’s IPv6 format dhcp server as input example : 2001:db8::1234 (list of strings).
- **ipv6DnsServers** (*list*) – Network Settings’s IPv6 format dns server input example: 2001:db8::1234 (list of strings).
- **ipv6GateWay** (*string*) – Network Settings’s Gateway ip address details, example: 2001:db8:85a3:0:100::1 .
- **ipv6GlobalPool** (*string*) – Network Settings’s IP v6 Global pool address with cidr this is required when Ipv6AddressSpace value is true, example: 2001:db8:85a3::/64 .
- **ipv6Prefix** (*boolean*) – Network Settings’s IPv6 prefix value is true, the ip6 prefix length input field is enabled , if it is false ipv6 total Host input is enable .
- **ipv6PrefixLength** (*integer*) – Network Settings’s IPv6 prefix length is required when the ipv6prefix value is true .
- **ipv6Subnet** (*string*) – Network Settings’s IPv6 Subnet address, example :2001:db8:85a3:0:100:: .
- **ipv6TotalHost** (*integer*) – Network Settings’s IPv6 total host is required when ipv6prefix value is false. .
- **name** (*string*) – Network Settings’s Name of the reserve ip sub pool .
- **slaacSupport** (*boolean*) – Network Settings’s Slaac Support.
- **site_id** (*basestring*) – siteId path parameter. Site id of site to update sub pool. .
- **id** (*basestring*) – id query parameter. Id of subpool to be associated with the site .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_service_provider_details(*headers=None, **request_parameters*)

API to get service provider details (QoS). .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_sp_profile(settings=None, headers=None, payload=None, active_validation=True,  
                 **request_parameters)
```

API to create service provider profile(QOS). .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_sp_profile(settings=None, headers=None, payload=None, active_validation=True,  
                 **request_parameters)
```

API to update SP profile .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_sp_profile(*sp_profile_name*, *headers=None*, ***request_parameters*)

API to delete Service Provider profile (QoS). .

Parameters

- **sp_profile_name** (*basestring*) – spProfileName path parameter. sp profile name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

path_trace

class PathTrace

Cisco DNA Center Path Trace API (version: 2.3.3.0).

Wraps the DNA Center Path Trace API and exposes the API as native Python methods that return native Python objects.

retrives_all_previous_pathtraces_summary(*dest_ip=None*, *dest_port=None*, *gt_create_time=None*, *last_update_time=None*, *limit=None*, *lt_create_time=None*, *offset=None*, *order=None*, *periodic_refresh=None*, *protocol=None*, *sort_by=None*, *source_ip=None*, *source_port=None*, *status=None*, *task_id=None*, *headers=None*, ***request_parameters*)

Returns a summary of all flow analyses stored. Results can be filtered by specified parameters. .

Parameters

- **periodic_refresh** (*bool*) – periodicRefresh query parameter. Is analysis periodically refreshed? .

- **source_ip** (*basestring*) – sourceIP query parameter. Source IP address .
- **dest_ip** (*basestring*) – destIP query parameter. Destination IP adress .
- **source_port** (*basestring*) – sourcePort query parameter. Source port .
- **dest_port** (*basestring*) – destPort query parameter. Destination port .
- **gt_create_time** (*basestring*) – gtCreateTime query parameter. Analyses requested after this time .
- **lt_create_time** (*basestring*) – ltCreateTime query parameter. Analyses requested before this time .
- **protocol** (*basestring*) – protocol query parameter.
- **status** (*basestring*) – status query parameter.
- **task_id** (*basestring*) – taskId query parameter. Task ID .
- **last_update_time** (*basestring*) – lastUpdateTime query parameter. Last update time .
- **limit** (*basestring*, *int*) – limit query parameter. Number of resources returned .
- **offset** (*basestring*, *int*) – offset query parameter. Start index of resources returned (1-based) .
- **order** (*basestring*) – order query parameter. Order by this field .
- **sort_by** (*basestring*) – sortBy query parameter. Sort by this field .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

initiate_a_new_pathtrace(*controlPath=None, destIP=None, destPort=None, inclusions=None, periodicRefresh=None, protocol=None, sourceIP=None, sourcePort=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Initiates a new flow analysis with periodic refresh and stat collection options. Returns a request id and a task id to get results and follow progress. .

Parameters

- **controlPath** (*boolean*) – Path Trace's controlPath.
- **destIP** (*string*) – Path Trace's destIP.
- **destPort** (*string*) – Path Trace's destPort.

- **inclusions** (*list*) – Path Trace’s inclusions (list of strings).
- **periodicRefresh** (*boolean*) – Path Trace’s periodicRefresh.
- **protocol** (*string*) – Path Trace’s protocol.
- **sourceIP** (*string*) – Path Trace’s sourceIP.
- **sourcePort** (*string*) – Path Trace’s sourcePort.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

retrieves_previous_pathtrace(*flow_analysis_id*, *headers=None*, ***request_parameters*)

Returns result of a previously requested flow analysis by its Flow Analysis id .

Parameters

- **flow_analysis_id** (*basestring*) – flowAnalysisId path parameter. Flow analysis request id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deletes_pathtrace_by_id(*flow_analysis_id*, *headers=None*, ***request_parameters*)

Deletes a flow analysis request by its id .

Parameters

- **flow_analysis_id** (*basestring*) – flowAnalysisId path parameter. Flow analysis request id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

platform_configuration**class PlatformConfiguration**

Cisco DNA Center Platform Configuration API (version: 2.3.3.0).

Wraps the DNA Center Platform Configuration API and exposes the API as native Python methods that return native Python objects.

release_summary(*headers=None, **request_parameters*)

Provides information such as API version, mandatory core packages for installation or upgrade, optional packages, Cisco DNA Center name and version, supported direct updates, and tenant ID. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

nodes_configuration_summary(*headers=None, **request_parameters*)

Provides details about the current Cisco DNA Center node configuration, such as API version, node name, NTP server, intracenter link, LACP mode, network static routes, DNS server, subnet mask, host IP, default gateway, and interface information. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

reports

class Reports

Cisco DNA Center Reports API (version: 2.3.3.0).

Wraps the DNA Center Reports API and exposes the API as native Python methods that return native Python objects.

create_or_schedule_a_report(*deliveries=None, name=None, schedule=None, tags=None, view=None, viewGroupId=None, viewGroupVersion=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Create/Schedule a report configuration. Use “Get view details for a given view group & view” API to get the metadata required to configure a report. .

Parameters

- **deliveries** (*list*) – Reports's Array of available delivery channels (list of objects).
- **name** (*string*) – Reports's report name .
- **schedule** (*object*) – Reports's schedule.
- **tags** (*list*) – Reports's array of tags for report (list of strings).
- **view** (*object*) – Reports's view.
- **viewGroupId** (*string*) – Reports's viewGroupId of the viewgroup for the report .
- **viewGroupVersion** (*string*) – Reports's version of viewgroup for the report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_list_of_scheduled_reports(*view_group_id=None, view_id=None, headers=None, **request_parameters*)

Get list of scheduled report configurations. .

Parameters

- **view_group_id** (*basestring*) – viewGroupId query parameter. viewGroupId of view-group for report .
- **view_id** (*basestring*) – viewId query parameter. viewId of view for report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type*list***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_a_scheduled_report(*report_id, headers=None, **request_parameters*)

Get scheduled report configuration by reportId .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

delete_a_scheduled_report(*report_id*, *headers=None*, ***request_parameters*)

Delete a scheduled report configuration. Deletes the report executions also. .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_all_execution_details_for_a_given_report(*report_id*, *headers=None*, ***request_parameters*)

Get details of all executions for a given report .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

download_report_content(*execution_id*, *report_id*, *dirpath=None*, *save_file=None*, *filename=None*, *headers=None*, ***request_parameters*)

Returns report content. Save the response to a file by converting the response data as a blob and setting the file format available from content-disposition response header. .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .

- **execution_id** (*basestring*) – executionId path parameter. executionId of report execution .
- **dirpath** (*basestring*) – Directory absolute path. Defaults to os.getcwd().
- **save_file** (*bool*) – Enable or disable automatic file creation of raw response.
- **filename** (*basestring*) – The filename used to save the download file.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

The DownloadResponse wrapper. Wraps the urllib3.response.HTTPResponse. For more information check the [urllib3 documentation](#)

Return type

DownloadResponse

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.
- **DownloadFailure** – If was not able to download the raw
- **response to a file.** –

get_all_view_groups(*headers=None, **request_parameters*)

Gives a list of summary of all view groups. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_views_for_a_given_view_group(*view_group_id, headers=None, **request_parameters*)

Gives a list of summary of all views in a viewgroup. Use “Get all view groups” API to get the viewGroupIds (required as a query param for this API) for available viewgroups. .

Parameters

- **view_group_id** (*basestring*) – viewGroupId path parameter. viewGroupId of viewgroup. .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_view_details_for_a_given_view_group_and_view(*view_group_id*, *view_id*, *headers=None*,
***request_parameters*)

Gives complete information of the view that is required to configure a report. Use “Get views for a given view group” API to get the viewIds (required as a query param for this API) for available views. .

Parameters

- **view_group_id** (*basestring*) – viewGroupId path parameter. viewGroupId of view-group .
- **view_id** (*basestring*) – viewId path parameter. view id of view .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sda**class Sda**

Cisco DNA Center SDA API (version: 2.3.3.0).

Wraps the DNA Center SDA API and exposes the API as native Python methods that return native Python objects.

```
get_default_authentication_profile(site_name_hierarchy, authenticate_template_name=None,
                                  headers=None, **request_parameters)
```

Get default authentication profile from SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **authenticate_template_name** (*basestring*) – authenticateTemplateName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
add_default_authentication_profile(headers=None, payload=None, active_validation=True,
                                   **request_parameters)
```

Add default authentication template in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_default_authentication_profile(headers=None, payload=None, active_validation=True,
                                      **request_parameters)
```

Update default authentication profile in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_default_authentication_profile(*site_name_hierarchy*, *headers=None*,
 ***request_parameters*)

Delete default authentication profile in SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

adds_border_device(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add border device in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

gets_border_device_detail(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Get border device detail from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deletes_border_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Delete border device from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_control_plane_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Delete control plane device in SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – *deviceManagementIpAddress* query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_control_plane_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Get control plane device from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – *deviceManagementIpAddress* query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_control_plane_device(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add control plane device in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_info(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Get device info from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – *deviceManagementIpAddress* query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_role_in_sda_fabric(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Get device role in SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – *deviceManagementIpAddress* query parameter. Device Management IP Address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_edge_device(*deviceManagementIpAddress=None, siteNameHierarchy=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Add edge device in SDA Fabric .

Parameters

- **deviceManagementIpAddress** (*string*) – SDA's Management Ip Address of the Device which is provisioned successfully .
- **siteNameHierarchy** (*string*) – SDA's siteNameHierarchy of the Provisioned Device(site should be part of Fabric Site) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_edge_device(*device_management_ip_address, headers=None, **request_parameters*)

Delete edge device from SDA Fabric. .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_edge_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Get edge device from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site(*site_name_hierarchy*, *headers=None*, ***request_parameters*)

Get Site info from SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. Site Name Hierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_site(*site_name_hierarchy*, *headers=None*, ***request_parameters*)

Delete Site from SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. Site Name Hierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_site(*fabricName=None*, *siteNameHierarchy=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add Site in SDA Fabric .

Parameters

- **fabricName** (*string*) – SDA's Warning Starting DNA Center 2.2.3.5 release, this field has been deprecated. SD-Access Fabric does not need it anymore. It will be removed in future DNA Center releases. .
- **siteNameHierarchy** (*string*) – SDA's Existing site name hierarchy available at global level. For Example "Global/Chicago/Building21/Floor1" .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

```
add_port_assignment_for_access_point(authenticateTemplateName=None,
                                     dataIpAddressPoolName=None,
                                     deviceManagementIpAddress=None,
                                     interfaceDescription=None, interfaceName=None,
                                     siteNameHierarchy=None, headers=None, payload=None,
                                     active_validation=True, **request_parameters)
```

Add Port assignment for access point in SDA Fabric .

Parameters

- **authenticateTemplateName** (*string*) – SDA's Authenticate TemplateName associated to Fabric Site . Available values are 'No Authentication', 'Open Authentication', 'Closed Authentication ' and 'Low Impact'.
- **dataIpAddressPoolName** (*string*) – SDA's Ip Pool Name, that is assigned to IN-FRA_VN .
- **deviceManagementIpAddress** (*string*) – SDA's Management Ip Address of the edge device .
- **interfaceDescription** (*string*) – SDA's Details or note of interface port assignment .
- **interfaceName** (*string*) – SDA's Interface Name of the edge device .
- **siteNameHierarchy** (*string*) – SDA's Path of sda Fabric Site .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
delete_port_assignment_for_access_point(device_management_ip_address, interface_name,
                                       headers=None, **request_parameters)
```

Delete Port assignment for access point in SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **interface_name** (*basestring*) – interfaceName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_port_assignment_for_access_point(*device_management_ip_address*, *interface_name*,
headers=None, ***request_parameters*)

Get Port assignment for access point in SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – *deviceManagementIpAddress* query parameter.
- **interface_name** (*basestring*) – *interfaceName* query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_port_assignment_for_user_device(*device_management_ip_address*, *interface_name*,
headers=None, ***request_parameters*)

Delete Port assignment for user device in SDA Fabric. .

Parameters

- **device_management_ip_address** (*basestring*) – *deviceManagementIpAddress* query parameter.
- **interface_name** (*basestring*) – *interfaceName* query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
add_port_assignment_for_user_device(authenticateTemplateName=None,
                                     dataIpAddressPoolName=None,
                                     deviceManagementIpAddress=None,
                                     interfaceDescription=None, interfaceName=None,
                                     scalableGroupName=None, siteNameHierarchy=None,
                                     voiceIpAddressPoolName=None, headers=None,
                                     payload=None, active_validation=True,
                                     **request_parameters)
```

Add Port assignment for user device in SDA Fabric. .

Parameters

- **authenticateTemplateName** (*string*) – SDA's Authenticate TemplateName associated with siteNameHierarchy . Available values are 'Open Authentication', 'Closed Authentication', 'Low Impact', 'No Authentication' and ''.
- **dataIpAddressPoolName** (*string*) – SDA's Ip Pool Name, that is assigned to virtual network with traffic type as DATA(can't be empty if voiceIpAddressPoolName is empty) .
- **deviceManagementIpAddress** (*string*) – SDA's Management Ip Address of the edge device .
- **interfaceDescription** (*string*) – SDA's User defined text message for this port .
- **interfaceName** (*string*) – SDA's Interface Name of the Edge Node .
- **scalableGroupName** (*string*) – SDA's Scalable Group name associated with VN .
- **siteNameHierarchy** (*string*) – SDA's Complete Path of SD-Access Fabric Site .
- **voiceIpAddressPoolName** (*string*) – SDA's Ip Pool Name, that is assigned to virtual network with traffic type as VOICE(can't be empty if dataIpAddressPoolName is empty) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_port_assignment_for_user_device(*device_management_ip_address*, *interface_name*,
headers=None, ***request_parameters*)

Get Port assignment for user device in SDA Fabric. .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **interface_name** (*basestring*) – interfaceName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_multicast_in_sda_fabric(*multicastMethod=None*, *multicastType=None*, *multicastVnInfo=None*,
siteNameHierarchy=None, *headers=None*, *payload=None*,
active_validation=True, ***request_parameters*)

Add multicast in SDA fabric .

Parameters

- **multicastMethod** (*string*) – SDA's Multicast Method . Available values are 'native_multicast'.
- **multicastType** (*string*) – SDA's Multicast Type . Available values are 'ssm', 'asm_with_internal_rp' and 'asm_with_external_rp'.
- **multicastVnInfo** (*list*) – SDA's multicastVnInfo (list of objects).
- **siteNameHierarchy** (*string*) – SDA's Full path of sda Fabric Site .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_multicast_details_from_sda_fabric(*site_name_hierarchy*, *headers=None*,
***request_parameters*)

Get multicast details from SDA fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. fabric site name hierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_multicast_from_sda_fabric(*site_name_hierarchy*, *headers=None*, ***request_parameters*)

Delete multicast from SDA fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_provisioned_wired_device(*device_management_ip_address*, *headers=None*,
***request_parameters*)

Delete provisioned Wired Device .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter. Valid IP address of the device currently provisioned in a fabric site .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

re_provision_wired_device(*deviceManagementIpAddress=None*, *siteNameHierarchy=None*,
headers=None, *payload=None*, *active_validation=True*,
***request_parameters*)

Re-Provision Wired Device .

Parameters

- **deviceManagementIpAddress** (*string*) – SDA's Management Ip Address of the device to be re-provisioned .
- **siteNameHierarchy** (*string*) – SDA's siteNameHierarchy of the provisioned device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

provision_wired_device(*deviceManagementIpAddress=None, siteNameHierarchy=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Provision Wired Device .

Parameters

- **deviceManagementIpAddress** (*string*) – SDA’s Management Ip Address of the device to be provisioned .
- **siteNameHierarchy** (*string*) – SDA’s Site Name Hierarchy for device location(only building / floor level) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_provisioned_wired_device(*device_management_ip_address, headers=None, **request_parameters*)

Get Provisioned Wired Device .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_transit_peer_network(*transit_peer_network_name*, *headers=None*, ***request_parameters*)

Delete Transit Peer Network from SD-Access .

Parameters

- **transit_peer_network_name** (*basestring*) – transitPeerNetworkName query parameter. Transit Peer Network Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_transit_peer_network_info(*transit_peer_network_name*, *headers=None*, ***request_parameters*)

Get Transit Peer Network Info from SD-Access .

Parameters

- **transit_peer_network_name** (*basestring*) – transitPeerNetworkName query parameter. Transit or Peer Network Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_transit_peer_network(*ipTransitSettings=None*, *sdaTransitSettings=None*,
transitPeerNetworkName=None, *transitPeerNetworkType=None*,
headers=None, *payload=None*, *active_validation=True*,
***request_parameters*)

Add Transit Peer Network in SD-Access .

Parameters

- **ipTransitSettings** (*object*) – SDA's ipTransitSettings.

- **sdaTransitSettings** (*object*) – SDA's sdaTransitSettings.
- **transitPeerNetworkName** (*string*) – SDA's Transit Peer Network Name .
- **transitPeerNetworkType** (*string*) – SDA's Transit Peer Network Type . Available values are 'ip_transit', 'sda_transit_with_lisp_bgp' and 'sda_transit_with_pub_sub'.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_vn(*site_name_hierarchy, virtual_network_name, headers=None, **request_parameters*)

Delete virtual network (VN) from SDA Fabric .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_vn(*site_name_hierarchy, virtual_network_name, headers=None, **request_parameters*)

Get virtual network (VN) from SDA Fabric .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_vn(*siteNameHierarchy=None, virtualNetworkName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Add virtual network (VN) in SDA Fabric .

Parameters

- **siteNameHierarchy** (*string*) – SDA's Path of sda Fabric Site .
- **virtualNetworkName** (*string*) – SDA's Virtual Network Name, that is created at Global level .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-vn>

get_virtual_network_summary(*site_name_hierarchy, headers=None, **request_parameters*)

Get Virtual Network Summary .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. Complete fabric siteNameHierarchy Path .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_ip_pool_from_sda_virtual_network(*ip_pool_name*, *site_name_hierarchy*, *virtual_network_name*, *headers=None*, ***request_parameters*)

Get IP Pool from SDA Virtual Network .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **ip_pool_name** (*basestring*) – ipPoolName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_ip_pool_from_sda_virtual_network(*ip_pool_name*, *site_name_hierarchy*, *virtual_network_name*, *headers=None*, ***request_parameters*)

Delete IP Pool from SDA Virtual Network .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.

- **ip_pool_name** (*basestring*) – ipPoolName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
add_ip_pool_in_sda_virtual_network(autoGenerateVlanName=None, ipPoolName=None,
                                   isCommonPool=None, isIpDirectedBroadcast=None,
                                   isL2FloodingEnabled=None, isLayer2Only=None,
                                   isThisCriticalPool=None, isWirelessPool=None,
                                   poolType=None, scalableGroupName=None,
                                   siteNameHierarchy=None, trafficType=None,
                                   virtualNetworkName=None, vlanId=None, vlanName=None,
                                   headers=None, payload=None, active_validation=True,
                                   **request_parameters)
```

Add IP Pool in SDA Virtual Network .

Parameters

- **autoGenerateVlanName** (*boolean*) – SDA's It will auto generate vlanName, if vlanName is empty(applicable for L3 and INFRA_VN) .
- **ipPoolName** (*string*) – SDA's Ip Pool Name, that is reserved to Fabric Site for (applicable for L3 and INFRA_VN) .
- **isCommonPool** (*boolean*) – SDA's Common Pool enablement flag(applicable for L3 and L2 and default value is False) .
- **isIpDirectedBroadcast** (*boolean*) – SDA's Ip Directed Broadcast enablement flag(applicable for L3 and default value is False) .
- **isL2FloodingEnabled** (*boolean*) – SDA's Layer2 flooding enablement flag(applicable for L3 , L2 and always true for L2 and default value is False) .
- **isLayer2Only** (*boolean*) – SDA's Layer2 Only enablement flag and default value is False .
- **isThisCriticalPool** (*boolean*) – SDA's Critical pool enablement(applicable for L3 and default value is False) .
- **isWirelessPool** (*boolean*) – SDA's Wireless Pool enablement flag(applicable for L3 and L2 and default value is False) .
- **poolType** (*string*) – SDA's Pool Type (applicable for INFRA_VN) . Available values are 'AP' and 'Extended'.
- **scalableGroupName** (*string*) – SDA's Scalable Group Name(applicable for L3) .

- **siteNameHierarchy** (*string*) – SDA's Path of sda Fabric Site .
- **trafficType** (*string*) – SDA's Traffic type(applicable for L3 and L2) . Available values are 'Data' and 'Voice'.
- **virtualNetworkName** (*string*) – SDA's Virtual Network Name, that is associated to Fabric Site .
- **vlanId** (*string*) – SDA's vlan Id(applicable for L3 , L2 and INFRA_VN) .
- **vlanName** (*string*) – SDA's Vlan name represent the segment name, if empty, vlanName would be auto generated by API .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
add_virtual_network_with_scalable_groups(isGuestVirtualNetwork=None,
                                         scalableGroupNames=None,
                                         virtualNetworkName=None, headers=None,
                                         payload=None, active_validation=True,
                                         **request_parameters)
```

Add virtual network with scalable groups at global level .

Parameters

- **isGuestVirtualNetwork** (*boolean*) – SDA's To create guest virtual network .
- **scalableGroupNames** (*list*) – SDA's Scalable Group to be associated to virtual network (list of strings).
- **virtualNetworkName** (*string*) – SDA's Virtual Network Name to be assigned at global level .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_virtual_network_with_scalable_groups(*virtual_network_name*, *headers=None*,
***request_parameters*)

Delete virtual network with scalable groups .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_virtual_network_with_scalable_groups(*virtual_network_name*, *headers=None*,
***request_parameters*)

Get virtual network with scalable groups .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_virtual_network_with_scalable_groups(isGuestVirtualNetwork=None,  
                                             scalableGroupNames=None,  
                                             virtualNetworkName=None, headers=None,  
                                             payload=None, active_validation=True,  
                                             **request_parameters)
```

Update virtual network with scalable groups .

Parameters

- **isGuestVirtualNetwork** (*boolean*) – SDA's To create guest virtual network .
- **scalableGroupNames** (*list*) – SDA's Scalable Group Name to be associated to virtual network (list of strings).
- **virtualNetworkName** (*string*) – SDA's Virtual Network Name to be assigned global level .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

security_advisories

class SecurityAdvisories

Cisco DNA Center Security Advisories API (version: 2.3.3.0).

Wraps the DNA Center Security Advisories API and exposes the API as native Python methods that return native Python objects.

```
get_advisories_list(headers=None, **request_parameters)
```

Retrieves list of advisories on the network .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_advisories_summary(*headers=None, **request_parameters*)

Retrieves summary of advisories on the network. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_devices_per_advisory(*advisory_id, headers=None, **request_parameters*)

Retrieves list of devices for an advisory .

Parameters

- **advisory_id** (*basestring*) – advisoryId path parameter. Advisory ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_advisory_ids_per_device(*device_id, headers=None, **request_parameters*)

Retrieves list of advisory IDs for a device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device instance UUID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_advisories_per_device(*device_id*, *headers=None*, ***request_parameters*)

Retrieves list of advisories for a device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device instance UUID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sensors

class Sensors

Cisco DNA Center Sensors API (version: 2.3.3.0).

Wraps the DNA Center Sensors API and exposes the API as native Python methods that return native Python objects.

edit_sensor_test_template(*locationInfoList=None*, *schedule=None*, *templateName=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Intent API to deploy, schedule, or edit and existing SENSOR test template .

Parameters

- **locationInfoList** (*list*) – Sensors’s locationInfoList (list of objects).
- **schedule** (*object*) – Sensors’s schedule.
- **templateName** (*string*) – Sensors’s Template Name.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_sensor_test_template(*apCoverage=None, connection=None, modelVersion=None, name=None, ssids=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Intent API to create a SENSOR test template with a new SSID, existing SSID, or both new and existing SSID .

Parameters

- **apCoverage** (*list*) – Sensors’s apCoverage (list of objects).
- **connection** (*string*) – Sensors’s Connection.
- **modelVersion** (*integer*) – Sensors’s Model Version.
- **name** (*string*) – Sensors’s Name.
- **ssids** (*list*) – Sensors’s ssids (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_sensor_test(*template_name=None, headers=None, **request_parameters*)

Intent API to delete an existing SENSOR test template .

Parameters

- **template_name** (*basestring*) – templateName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sensors(*site_id=None, headers=None, **request_parameters*)

Intent API to get a list of SENSOR devices .

Parameters

- **site_id** (*basestring*) – siteId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

run_now_sensor_test(*templateName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Intent API to run a deployed SENSOR test .

Parameters

- **templateName** (*string*) – Sensors's Template Name.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

duplicate_sensor_test_template(*newTemplateName=None, templateName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Intent API to duplicate an existing SENSOR test template .

Parameters

- **newTemplateName** (*string*) – Sensors's New Template Name.
- **templateName** (*string*) – Sensors's Template Name.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

site_design

class SiteDesign

Cisco DNA Center Site Design API (version: 2.3.3.0).

Wraps the DNA Center Site Design API and exposes the API as native Python methods that return native Python objects.

provision_nfv(*provisioning=None, siteProfile=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Design and Provision single/multi NFV device with given site/area/building/floor . .

Parameters

- **provisioning** (*list*) – Site Design’s provisioning (list of objects).
- **siteProfile** (*list*) – Site Design’s siteProfile (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_details_by_ip(*device_ip, headers=None, **request_parameters*)

Returns provisioning device information for the specified IP address. .

Parameters

- **device_ip** (*basestring*) – deviceIp query parameter. Device to which the provisioning detail has to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

associate(*network_profile_id*, *site_id*, *headers=None*, ***request_parameters*)

Associate Site to a Network Profile .

Parameters

- **network_profile_id** (*basestring*) – networkProfileId path parameter. Network-Profile Id to be associated .
- **site_id** (*basestring*) – siteId path parameter. Site Id to be associated .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

disassociate(*network_profile_id*, *site_id*, *headers=None*, ***request_parameters*)

Disassociate a Site from a Network Profile .

Parameters

- **network_profile_id** (*basestring*) – networkProfileId path parameter. Network-Profile Id to be associated .
- **site_id** (*basestring*) – siteId path parameter. Site Id to be associated .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

nfv_provisioning_detail(*device_ip=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Checks the provisioning detail of an ENCS device including log information. .

Parameters

- **device_ip** (*string*) – Site Design’s Device Ip.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_nfv_profile(*device=None, profileName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to create network profile for different NFV topologies .

Parameters

- **device** (*list*) – Site Design’s device (list of objects).
- **profileName** (*string*) – Site Design’s Name of the profile to create NFV profile .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_nfv_profile(id, device=None, name=None, headers=None, payload=None,
                  active_validation=True, **request_parameters)
```

API to update a NFV Network profile .

Parameters

- **device** (*list*) – Site Design’s device (list of objects).
- **id** (*basestring*) – id path parameter. Id of the NFV profile to be updated .
- **name** (*basestring*) – name query parameter. Name of the profile to be updated .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_nfv_profile(id, limit=None, name=None, offset=None, headers=None, **request_parameters)
```

API to get NFV network profile. .

Parameters

- **id** (*basestring*) – id path parameter. ID of network profile to retrieve. .
- **offset** (*basestring*, *int*) – offset query parameter. offset/starting row .
- **limit** (*basestring*, *int*) – limit query parameter. Number of profile to be retrieved .
- **name** (*basestring*) – name query parameter. Name of network profile to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

delete_nfv_profile(*id*, *name=None*, *headers=None*, ***request_parameters*)

API to delete nvf network profile. .

Parameters

- **id** (*basestring*) – id path parameter. Id of nvf network profile to delete. .
- **name** (*basestring*) – name query parameter. Name of nvf network profile to delete. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

sites

class Sites

Cisco DNA Center Sites API (version: 2.3.3.0).

Wraps the DNA Center Sites API and exposes the API as native Python methods that return native Python objects.

assign_devices_to_site(*site_id*, *device=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Assigns unassigned devices to a site. This API does not move assigned devices to other sites. .

Parameters

- **device** (*list*) – Sites's device (list of objects).
- **site_id** (*basestring*) – siteId path parameter. Site id to which site the device to assign .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_membership(*site_id*, *device_family=None*, *limit=None*, *offset=None*, *serial_number=None*, *headers=None*, ***request_parameters*)

Getting the site children details and device details. .

Parameters

- **site_id** (*basestring*) – siteId path parameter. Site id to retrieve device associated with the site. .
- **offset** (*basestring*, *int*) – offset query parameter. offset/starting row .
- **limit** (*basestring*, *int*) – limit query parameter. Number of sites to be retrieved .
- **device_family** (*basestring*) – deviceFamily query parameter. Device family name .
- **serial_number** (*basestring*) – serialNumber query parameter. Device serial number .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_site(*site=None*, *type=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Creates site with area/building/floor with specified hierarchy. .

Parameters

- **site** (*object*) – Sites's site.
- **type** (*string*) – Sites's Type of site to create (eg: area, building, floor) . Available values are 'area', 'building' and 'floor'.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site(*limit=None, name=None, offset=None, site_id=None, type=None, headers=None, **request_parameters*)

Get site using siteNameHierarchy/siteId/type ,return all sites if these parameters are not given as input. .

Parameters

- **name** (*basestring*) – name query parameter. siteNameHierarchy (ex: global/groupName) .
- **site_id** (*basestring*) – siteId query parameter. Site id to which site details to retrieve. .
- **type** (*basestring*) – type query parameter. type (ex: area, building, floor) .
- **offset** (*basestring, int*) – offset query parameter. offset/starting row. The default value is 1 .
- **limit** (*basestring, int*) – limit query parameter. Number of sites to be retrieved. The default value is 500 .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site_health(*limit=None, offset=None, site_type=None, timestamp=None, headers=None, **request_parameters*)

Returns Overall Health information for all sites .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the Site Hierarchy data is required .

- **site_type** (*basestring*) – siteType query parameter. Type of the site to return. AREA or BUILDING. Default to AREA .
- **offset** (*basestring*, *int*) – offset query parameter. The offset value, starting from 1, of the first returned site entry. Default is 1. .
- **limit** (*basestring*, *int*) – limit query parameter. The max number of sites in the returned data set. Default is 25, and max at 50 .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site_count(*site_id=None, headers=None, **request_parameters*)

API to get site count .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Site id to retrieve site count. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_site(*site_id, site=None, type=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Update site area/building/floor with specified hierarchy and new values .

Parameters

- **site** (*object*) – Sites's site.
- **type** (*string*) – Sites's Type. Available values are 'area', 'building' and 'floor'.

- **site_id** (*basestring*) – siteId path parameter. Site id to which site details to be updated.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_site(*site_id*, *headers=None*, ***request_parameters*)

Delete site with area/building/floor by siteId. .

Parameters

- **site_id** (*basestring*) – siteId path parameter. Site id to which site details to be deleted.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

software_image_management_swim

class SoftwareImageManagementSwim

Cisco DNA Center Software Image Management (SWIM) API (version: 2.3.3.0).

Wraps the DNA Center Software Image Management (SWIM) API and exposes the API as native Python methods that return native Python objects.

trigger_software_image_activation(*schedule_validate=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Activates a software image on a given device. Software image must be present in the device flash .

Parameters

- **schedule_validate** (*bool*) – scheduleValidate query parameter. scheduleValidate, validates data before schedule (Optional) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

trigger_software_image_distribution(*headers=None, payload=None, active_validation=True, **request_parameters*)

Distributes a software image on a given device. Software image must be imported successfully into DNA Center before it can be distributed .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_software_image_details(application_type=None, created_time=None, family=None,
                           image_integrity_status=None, image_name=None, image_series=None,
                           image_size_greater_than=None, image_size_lesser_than=None,
                           image_uuid=None, is_cco_latest=None, is_cco_recommended=None,
                           is_tagged_golden=None, limit=None, name=None, offset=None,
                           sort_by=None, sort_order=None, version=None, headers=None,
                           **request_parameters)
```

Returns software image list based on a filter criteria. For example: “filterbyName = cat3k%” .

Parameters

- **image_uuid** (*basestring*) – imageUuid query parameter.
- **name** (*basestring*) – name query parameter.
- **family** (*basestring*) – family query parameter.
- **application_type** (*basestring*) – applicationType query parameter.
- **image_integrity_status** (*basestring*) – imageIntegrityStatus query parameter. imageIntegrityStatus FAILURE, UNKNOWN, VERIFIED .
- **version** (*basestring*) – version query parameter. software Image Version .
- **image_series** (*basestring*) – imageSeries query parameter. image Series .
- **image_name** (*basestring*) – imageName query parameter. image Name .
- **is_tagged_golden** (*bool*) – isTaggedGolden query parameter. is Tagged Golden .
- **is_cco_recommended** (*bool*) – isCCORecommended query parameter. is recommended from cisco.com .
- **is_cco_latest** (*bool*) – isCCOLatest query parameter. is latest from cisco.com .
- **created_time** (*int*) – createdTime query parameter. time in milliseconds (epoch format) .
- **image_size_greater_than** (*int*) – imageSizeGreaterThan query parameter. size in bytes .
- **image_size_lesser_than** (*int*) – imageSizeLesserThan query parameter. size in bytes .
- **sort_by** (*basestring*) – sortBy query parameter. sort results by this field .
- **sort_order** (*basestring*) – sortOrder query parameter. sort order ‘asc’ or ‘des’. Default is asc .
- **limit** (*basestring*, *int*) – limit query parameter.
- **offset** (*basestring*, *int*) – offset query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_device_family_identifiers(*headers=None, **request_parameters*)

API to get Device Family Identifiers for all Device Families that can be used for tagging an image golden. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

tag_as_golden_image(*deviceFamilyIdentifier=None, deviceRole=None, imageId=None, siteId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Golden Tag image. Set siteId as -1 for Global site. .

Parameters

- **deviceFamilyIdentifier** (*string*) – Software Image Management (SWIM)'s Device Family Identifier e.g. : 277696480-283933147, 277696480 .
- **deviceRole** (*string*) – Software Image Management (SWIM)'s Device Role. Permissible Values : ALL, UNKNOWN, ACCESS, BORDER ROUTER, DISTRIBUTION and CORE. .
- **imageId** (*string*) – Software Image Management (SWIM)'s imageId in uuid format. .
- **siteId** (*string*) – Software Image Management (SWIM)'s SiteId in uuid format. For Global Site “-1” to be used. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

remove_golden_tag_for_image(*device_family_identifier*, *device_role*, *image_id*, *site_id*, *headers=None*, ***request_parameters*)

Remove golden tag. Set siteId as -1 for Global site. .

Parameters

- **site_id** (*basestring*) – siteId path parameter. Site Id in uuid format. Set siteId as -1 for Global site. .
- **device_family_identifier** (*basestring*) – deviceFamilyIdentifier path parameter. Device family identifier e.g. : 277696480-283933147, e.g. : 277696480 .
- **device_role** (*basestring*) – deviceRole path parameter. Device Role. Permissible Values : ALL, UNKNOWN, ACCESS, BORDER ROUTER, DISTRIBUTION and CORE. .
- **image_id** (*basestring*) – imageId path parameter. Image Id in uuid format. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_golden_tag_status_of_an_image(*device_family_identifier*, *device_role*, *image_id*, *site_id*, *headers=None*, ***request_parameters*)

Get golden tag status of an image. Set siteId as -1 for Global site. .

Parameters

- **site_id** (*basestring*) – siteId path parameter. Site Id in uuid format. Set siteId as -1 for Global site. .
- **device_family_identifier** (*basestring*) – deviceFamilyIdentifier path parameter. Device family identifier e.g. : 277696480-283933147, e.g. : 277696480 .

- **device_role** (*basestring*) – deviceRole path parameter. Device Role. Permissible Values : ALL, UNKNOWN, ACCESS, BORDER ROUTER, DISTRIBUTION and CORE. .
- **image_id** (*basestring*) – imageId path parameter. Image Id in uuid format. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
import_local_software_image(multipart_fields, multipart_monitor_callback, is_third_party=None,
                             third_party_application_type=None, third_party_image_family=None,
                             third_party_vendor=None, headers=None, **request_parameters)
```

Fetches a software image from local file system and uploads to DNA Center. Supported software image files extensions are bin, img, tar, smu, pie, aes, iso, ova, tar_gz and qcow2. Upload the file to the **file** form data field .

The following code gives an example of the multipart_fields.

```
multipart_fields={'file': ('file.zip', open('file.zip', 'rb'))}
multipart_fields={'file': ('file.txt', open('file.txt', 'rb'),
                             'text/plain',
                             {'X-My-Header': 'my-value'})}
multipart_fields=[('images', ('foo.png', open('foo.png', 'rb'),
                             'image/png')),
                  ('images', ('bar.png', open('bar.png', 'rb'), 'image/png'))]
```

The following example demonstrates how to use *multipart_monitor_callback=create_callback* to create a progress bar using clint.

```
from clint.textui.progress import Bar
def create_callback(encoder):
    encoder_len = encoder.len
    bar = Bar(expected_size=encoder_len,
              filled_char="=")
    def callback(monitor):
        bar.show(monitor.bytes_read)
    return callback
```

Parameters

- **is_third_party** (*bool*) – isThirdParty query parameter. Third party Image check .
- **third_party_vendor** (*basestring*) – thirdPartyVendor query parameter. Third Party Vendor .

- **third_party_image_family** (*basestring*) – thirdPartyImageFamily query parameter. Third Party image family .
- **third_party_application_type** (*basestring*) – thirdPartyApplicationType query parameter. Third Party Application Type .
- **multipart_fields** (*dict*) – Fields from which to create a multipart/form-data body.
- **multipart_monitor_callback** (*function*) – function used to monitor the progress of the upload.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
import_software_image_via_url(schedule_at=None, schedule_desc=None, schedule_origin=None,
                             headers=None, payload=None, active_validation=True,
                             **request_parameters)
```

Fetches a software image from remote file system (using URL for HTTP/FTP) and uploads to DNA Center. Supported image files extensions are bin, img, tar, smu, pie, aes, iso, ova, tar_gz and qcow2 .

Parameters

- **schedule_at** (*basestring*) – scheduleAt query parameter. Epoch Time (The number of milli-seconds since January 1 1970 UTC) at which the distribution should be scheduled (Optional) .
- **schedule_desc** (*basestring*) – scheduleDesc query parameter. Custom Description (Optional) .
- **schedule_origin** (*basestring*) – scheduleOrigin query parameter. Originator of this call (Optional) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

system_settings**class SystemSettings**

Cisco DNA Center System Settings API (version: 2.3.3.0).

Wraps the DNA Center System Settings API and exposes the API as native Python methods that return native Python objects.

custom_prompt_support_get_api(*headers=None, **request_parameters*)

Returns supported custom prompts by Cisco DNA Center .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

custom_prompt_post_api(*passwordPrompt=None, usernamePrompt=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Save custom prompt added by user in Cisco DNA Center. API will always override the existing prompts. User should provide all the custom prompt in case of any update .

Parameters

- **passwordPrompt** (*string*) – System Settings's Password Prompt.
- **usernamePrompt** (*string*) – System Settings's Username Prompt.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

tag**class Tag**

Cisco DNA Center Tag API (version: 2.3.3.0).

Wraps the DNA Center Tag API and exposes the API as native Python methods that return native Python objects.

update_tag(*description=None, dynamicRules=None, id=None, instanceTenantId=None, name=None, systemTag=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates a tag specified by id .

Parameters

- **description** (*string*) – Tag’s description.
- **dynamicRules** (*list*) – Tag’s dynamicRules (list of objects).
- **id** (*string*) – Tag’s id.
- **instanceTenantId** (*string*) – Tag’s instanceTenantId.
- **name** (*string*) – Tag’s name.
- **systemTag** (*boolean*) – Tag’s systemTag.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
get_tag(additional_info_attributes=None, additional_info_name_space=None, field=None, level=None,
        limit=None, name=None, offset=None, order=None, size=None, sort_by=None, system_tag=None,
        headers=None, **request_parameters)
```

Returns the tags for given filter criteria .

Parameters

- **name** (*basestring*) – name query parameter. Tag name is mandatory when filter operation is used. .
- **additional_info_name_space** (*basestring*) – additionalInfo.nameSpace query parameter.
- **additional_info_attributes** (*basestring*) – additionalInfo.attributes query parameter.
- **level** (*basestring*) – level query parameter.
- **offset** (*basestring*, *int*) – offset query parameter.
- **limit** (*basestring*, *int*) – limit query parameter.
- **size** (*basestring*) – size query parameter. size in kilobytes(KB) .
- **field** (*basestring*) – field query parameter. Available field names are : 'name,id,parentId,type,additionalInfo.nameSpace,additionalInfo.attributes' .
- **sort_by** (*basestring*) – sortBy query parameter. Only supported attribute is name. SortyBy is mandatory when order is used. .
- **order** (*basestring*) – order query parameter. Available values are asc and des .
- **system_tag** (*basestring*) – systemTag query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_tag(description=None, dynamicRules=None, id=None, instanceTenantId=None, name=None,
            systemTag=None, headers=None, payload=None, active_validation=True,
            **request_parameters)
```

Creates tag with specified tag attributes .

Parameters

- **description** (*string*) – Tag's description.
- **dynamicRules** (*list*) – Tag's dynamicRules (list of objects).
- **id** (*string*) – Tag's id.

- **instanceTenantId** (*string*) – Tag’s instanceTenantId.
- **name** (*string*) – Tag’s name.
- **systemTag** (*boolean*) – Tag’s systemTag.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_count(*attribute_name=None, level=None, name=None, name_space=None, size=None, system_tag=None, headers=None, **request_parameters*)

Returns tag count .

Parameters

- **name** (*basestring*) – name query parameter.
- **name_space** (*basestring*) – nameSpace query parameter.
- **attribute_name** (*basestring*) – attributeName query parameter.
- **level** (*basestring*) – level query parameter.
- **size** (*basestring*) – size query parameter. size in kilobytes(KB) .
- **system_tag** (*basestring*) – systemTag query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

updates_tag_membership(*memberToTags=None, memberType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates tag membership. As part of the request payload through this API, only the specified members are added / retained to the given input tags. Possible values of memberType attribute in the request payload can be queried by using the /tag/member/type API .

Parameters

- **memberToTags** (*list*) – Tag’s memberToTags (list of objects).
- **memberType** (*string*) – Tag’s memberType.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_resource_types(*headers=None, **request_parameters*)

Returns list of supported resource types .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_tag(*id, headers=None, **request_parameters*)

Deletes a tag specified by id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_by_id(*id*, *headers=None*, ***request_parameters*)

Returns tag specified by Id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_members_by_id(*id*, *member_type*, *level=None*, *limit=None*, *member_association_type=None*, *offset=None*, *headers=None*, ***request_parameters*)

Returns tag members specified by id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **member_type** (*basestring*) – memberType query parameter. Entity type of the member. Possible values can be retrieved by using /tag/member/type API .
- **offset** (*basestring*, *int*) – offset query parameter. Used for pagination. It indicates the starting row number out of available member records .
- **limit** (*basestring*, *int*) – limit query parameter. Used to Number of maximum members to return in the result .

- **member_association_type** (*basestring*) – memberAssociationType query parameter. Indicates how the member is associated with the tag. Possible values and description. 1) DYNAMIC : The member is associated to the tag through rules. 2) STATIC – The member is associated to the tag manually. 3) MIXED – The member is associated manually and also satisfies the rule defined for the tag .
- **level** (*basestring*) – level query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

add_members_to_the_tag(*id*, *object=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Adds members to the tag specified by id .

Parameters

- **object** (*string*) – Tag's object.
- **id** (*basestring*) – id path parameter. Tag ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tag_member_count(*id*, *member_type*, *level=None*, *member_association_type=None*, *headers=None*, ***request_parameters*)

Returns the number of members in a given tag .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **member_type** (*basestring*) – memberType query parameter.
- **member_association_type** (*basestring*) – memberAssociationType query parameter.
- **level** (*basestring*) – level query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

remove_tag_member(*id, member_id, headers=None, **request_parameters*)

Removes Tag member from the tag specified by id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **member_id** (*basestring*) – memberId path parameter. TagMember id to be removed from tag .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

task

class Task

Cisco DNA Center Task API (version: 2.3.3.0).

Wraps the DNA Center Task API and exposes the API as native Python methods that return native Python objects.

get_business_api_execution_details(*execution_id*, *headers=None*, ***request_parameters*)

Retrieves the execution details of a Business API .

Parameters

- **execution_id** (*basestring*) – executionId path parameter. Execution Id of API .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_tasks(*data=None*, *end_time=None*, *error_code=None*, *failure_reason=None*, *is_error=None*, *limit=None*, *offset=None*, *order=None*, *parent_id=None*, *progress=None*, *service_type=None*, *sort_by=None*, *start_time=None*, *username=None*, *headers=None*, ***request_parameters*)

Returns task(s) based on filter criteria .

Parameters

- **start_time** (*basestring*) – startTime query parameter. This is the epoch start time from which tasks need to be fetched .
- **end_time** (*basestring*) – endTime query parameter. This is the epoch end time upto which audit records need to be fetched .
- **data** (*basestring*) – data query parameter. Fetch tasks that contains this data .
- **error_code** (*basestring*) – errorCode query parameter. Fetch tasks that have this error code .
- **service_type** (*basestring*) – serviceType query parameter. Fetch tasks with this service type .
- **username** (*basestring*) – username query parameter. Fetch tasks with this username .
- **progress** (*basestring*) – progress query parameter. Fetch tasks that contains this progress .
- **is_error** (*basestring*) – isError query parameter. Fetch tasks ended as success or failure. Valid values: true, false .

- **failure_reason** (*basestring*) – failureReason query parameter. Fetch tasks that contains this failure reason .
- **parent_id** (*basestring*) – parentId query parameter. Fetch tasks that have this parent Id .
- **offset** (*basestring*, *int*) – offset query parameter.
- **limit** (*basestring*, *int*) – limit query parameter.
- **sort_by** (*basestring*) – sortBy query parameter. Sort results by this field .
- **order** (*basestring*) – order query parameter. Sort order asc or dsc .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_task_count(*data=None, end_time=None, error_code=None, failure_reason=None, is_error=None, parent_id=None, progress=None, service_type=None, start_time=None, username=None, headers=None, **request_parameters*)

Returns Task count .

Parameters

- **start_time** (*basestring*) – startTime query parameter. This is the epoch start time from which tasks need to be fetched .
- **end_time** (*basestring*) – endTime query parameter. This is the epoch end time upto which audit records need to be fetched .
- **data** (*basestring*) – data query parameter. Fetch tasks that contains this data .
- **error_code** (*basestring*) – errorCode query parameter. Fetch tasks that have this error code .
- **service_type** (*basestring*) – serviceType query parameter. Fetch tasks with this service type .
- **username** (*basestring*) – username query parameter. Fetch tasks with this username .
- **progress** (*basestring*) – progress query parameter. Fetch tasks that contains this progress .
- **is_error** (*basestring*) – isError query parameter. Fetch tasks ended as success or failure. Valid values: true, false .
- **failure_reason** (*basestring*) – failureReason query parameter. Fetch tasks that contains this failure reason .

- **parent_id** (*basestring*) – parentId query parameter. Fetch tasks that have this parent Id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_task_by_operationid(*limit, offset, operation_id, headers=None, **request_parameters*)

Returns root tasks associated with an Operationid .

Parameters

- **operation_id** (*basestring*) – operationId path parameter.
- **offset** (*basestring, int*) – offset path parameter. Index, minimum value is 0 .
- **limit** (*basestring, int*) – limit path parameter. The maximum value of {limit} supported is 500. Base 1 indexing for {limit}, minimum value is 1 .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_task_by_id(*task_id, headers=None, **request_parameters*)

Returns a task by specified id .

Parameters

- **task_id** (*basestring*) – taskId path parameter. UUID of the Task .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_task_tree(*task_id*, *headers=None*, ***request_parameters*)

Returns a task with its children tasks by based on their id .

Parameters

- **task_id** (*basestring*) – taskId path parameter. UUID of the Task .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

topology

class Topology

Cisco DNA Center Topology API (version: 2.3.3.0).

Wraps the DNA Center Topology API and exposes the API as native Python methods that return native Python objects.

get_overall_network_health(*timestamp=None*, *headers=None*, ***request_parameters*)

Returns Overall Network Health information by Device category (Access, Distribution, Core, Router, Wireless) for any given point of time .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the Network health data is required .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_topology_details(*vlan_id*, *headers=None*, ***request_parameters*)

Returns Layer 2 network topology by specified VLAN ID .

Parameters

- **vlan_id** (*basestring*) – vlanID path parameter. Vlan Name for e.g Vlan1, Vlan23 etc .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_l3_topology_details(*topology_type*, *headers=None*, ***request_parameters*)

Returns the Layer 3 network topology by routing protocol .

Parameters

- **topology_type** (*basestring*) – topologyType path parameter. Type of topology(OSPF,ISIS,etc) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_physical_topology(*node_type=None, headers=None, **request_parameters*)

Returns the raw physical topology by specified criteria of nodeType .

Parameters

- **node_type** (*basestring*) – nodeType query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_site_topology(*headers=None, **request_parameters*)

Returns site topology .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_vlan_details(*headers=None, **request_parameters*)

Returns the list of VLAN names .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

users

class Users

Cisco DNA Center Users API (version: 2.3.3.0).

Wraps the DNA Center Users API and exposes the API as native Python methods that return native Python objects.

get_user_enrichment_details(*headers=None, **request_parameters*)

Enriches a given network End User context (a network user-id or end user's device Mac Address) with details about the user and devices that the user is connected to .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

wireless

class Wireless

Cisco DNA Center Wireless API (version: 2.3.3.0).

Wraps the DNA Center Wireless API and exposes the API as native Python methods that return native Python objects.

sensor_test_results(*end_time=None, site_id=None, start_time=None, test_failure_by=None, headers=None, **request_parameters*)

Intent API to get SENSOR test result summary .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Assurance site UUID .
- **start_time** (*int*) – startTime query parameter. The epoch time in milliseconds .
- **end_time** (*int*) – endTime query parameter. The epoch time in milliseconds .
- **test_failure_by** (*basestring*) – testFailureBy query parameter. Obtain failure statistics group by “area”, “building”, or “floor” .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_and_provision_ssid(*enableFabric=None, flexConnect=None, managedAPLocations=None, ssidDetails=None, ssidType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Creates SSID, updates the SSID to the corresponding site profiles and provision it to the devices matching the given sites .

Parameters

- **enableFabric** (*boolean*) – Wireless’s Enable SSID for Fabric .
- **flexConnect** (*object*) – Wireless’s flexConnect.
- **managedAPLocations** (*list*) – Wireless’s Managed AP Locations (Enter entire Site(s) hierarchy) (list of strings).
- **ssidDetails** (*object*) – Wireless’s ssidDetails.
- **ssidType** (*string*) – Wireless’s SSID Type . Available values are ‘Guest’ and ‘Enterprise’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_ssid_and_provision_it_to_devices(*managed_aplocations*, *ssid_name*, *headers=None*,
***request_parameters*)

Removes SSID or WLAN from the network profile, reprovision the device(s) and deletes the SSID or WLAN from DNA Center .

Parameters

- **ssid_name** (*basestring*) – ssidName path parameter.
- **managed_aplocations** (*basestring*) – managedAPLocations path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_enterprise_ssid(*ssid_name=None*, *headers=None*, ***request_parameters*)

Gets either one or all the enterprise SSID .

Parameters

- **ssid_name** (*basestring*) – ssidName query parameter. Enter the enterprise SSID name that needs to be retrieved. If not entered, all the enterprise SSIDs will be retrieved. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
create_enterprise_ssid(basicServiceSetClientIdleTimeout=None, clientExclusionTimeout=None,
                        enableBasicServiceSetMaxIdle=None, enableBroadcastSSID=None,
                        enableClientExclusion=None, enableDirectedMulticastService=None,
                        enableFastLane=None, enableMACFiltering=None, enableNeighborList=None,
                        enableSessionTimeOut=None, fastTransition=None, mfpClientProtection=None,
                        name=None, nasOptions=None, passphrase=None, radioPolicy=None,
                        securityLevel=None, sessionTimeOut=None, trafficType=None, headers=None,
                        payload=None, active_validation=True, **request_parameters)
```

Creates enterprise SSID .

Parameters

- **basicServiceSetClientIdleTimeout** (*integer*) – Wireless’s Basic Service Set Client Idle Timeout.
- **clientExclusionTimeout** (*integer*) – Wireless’s Client Exclusion Timeout .
- **enableBasicServiceSetMaxIdle** (*boolean*) – Wireless’s Enable Basic Service Set Max Idle .
- **enableBroadcastSSID** (*boolean*) – Wireless’s Enable Broadcast SSID .
- **enableClientExclusion** (*boolean*) – Wireless’s Enable Client Exclusion .
- **enableDirectedMulticastService** (*boolean*) – Wireless’s Enable Directed Multicast Service.
- **enableFastLane** (*boolean*) – Wireless’s Enable FastLane .
- **enableMACFiltering** (*boolean*) – Wireless’s Enable MAC Filtering .
- **enableNeighborList** (*boolean*) – Wireless’s Enable Neighbor List.
- **enableSessionTimeOut** (*boolean*) – Wireless’s Enable Session Timeout .
- **fastTransition** (*string*) – Wireless’s Fast Transition . Available values are ‘Adaptive’, ‘Enable’ and ‘Disable’.
- **mfpClientProtection** (*string*) – Wireless’s Management Frame Protection Client. Available values are ‘Optional’, ‘Disabled’ and ‘Required’.
- **name** (*string*) – Wireless’s SSID NAME .
- **nasOptions** (*list*) – Wireless’s Nas Options (list of strings).
- **passphrase** (*string*) – Wireless’s Passphrase .
- **radioPolicy** (*string*) – Wireless’s Radio Policy Enum (enum: Triple band operation (2.4GHz, 5GHz and 6GHz), Triple band operation with band select, 5GHz only, 2.4GHz only, 6GHz only) . Available values are ‘Triple band operation (2.4GHz, 5GHz and 6GHz)’, ‘Triple band operation with band select’, ‘5GHz only’, ‘2.4GHz only’ and ‘6GHz only’.
- **securityLevel** (*string*) – Wireless’s Security Level . Available values are ‘WPA2_ENTERPRISE’, ‘WPA2_PERSONAL’, ‘OPEN’, ‘WPA3_ENTERPRISE’, ‘WPA3_PERSONAL’, ‘WPA2_WPA3_PERSONAL’ and ‘WPA2_WPA3_ENTERPRISE’.

- **sessionTimeout** (*integer*) – Wireless’s Session Time Out .
- **trafficType** (*string*) – Wireless’s Traffic Type Enum (voicedata or data) . Available values are ‘voicedata’ and ‘data’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

```
update_enterprise_ssid(basicServiceSetClientIdleTimeout=None, clientExclusionTimeout=None,
                        enableBasicServiceSetMaxIdle=None, enableBroadcastSSID=None,
                        enableClientExclusion=None, enableDirectedMulticastService=None,
                        enableFastLane=None, enableMACFiltering=None, enableNeighborList=None,
                        enableSessionTimeout=None, fastTransition=None, mfpClientProtection=None,
                        name=None, nasOptions=None, passphrase=None, radioPolicy=None,
                        securityLevel=None, sessionTimeout=None, trafficType=None, headers=None,
                        payload=None, active_validation=True, **request_parameters)
```

Update enterprise SSID .

Parameters

- **basicServiceSetClientIdleTimeout** (*integer*) – Wireless’s Basic Service Set Client Idle Timeout.
- **clientExclusionTimeout** (*integer*) – Wireless’s Client Exclusion Timeout .
- **enableBasicServiceSetMaxIdle** (*boolean*) – Wireless’s Enable Basic Service Set Max Idle .
- **enableBroadcastSSID** (*boolean*) – Wireless’s Enable Broadcast SSID .
- **enableClientExclusion** (*boolean*) – Wireless’s Enable Client Exclusion .
- **enableDirectedMulticastService** (*boolean*) – Wireless’s Enable Directed Multicast Service.
- **enableFastLane** (*boolean*) – Wireless’s Enable FastLane .
- **enableMACFiltering** (*boolean*) – Wireless’s Enable MAC Filtering .
- **enableNeighborList** (*boolean*) – Wireless’s Enable Neighbor List.
- **enableSessionTimeout** (*boolean*) – Wireless’s Enable Session Timeout .
- **fastTransition** (*string*) – Wireless’s Fast Transition . Available values are ‘Adaptive’, ‘Enable’ and ‘Disable’.

- **mfpClientProtection** (*string*) – Wireless’s Management Frame Protection Client. Available values are ‘Optional’, ‘Disabled’ and ‘Required’.
- **name** (*string*) – Wireless’s SSID NAME .
- **nasOptions** (*list*) – Wireless’s Nas Options (list of strings).
- **passphrase** (*string*) – Wireless’s Passphrase .
- **radioPolicy** (*string*) – Wireless’s Radio Policy Enum (enum: Triple band operation (2.4GHz, 5GHz and 6GHz), Triple band operation with band select, 5GHz only, 2.4GHz only, 6GHz only) . Available values are ‘Triple band operation (2.4GHz, 5GHz and 6GHz)’, ‘Triple band operation with band select’, ‘5GHz only’, ‘2.4GHz only’ and ‘6GHz only’.
- **securityLevel** (*string*) – Wireless’s Security Level . Available values are ‘WPA2_ENTERPRISE’, ‘WPA2_PERSONAL’, ‘OPEN’, ‘WPA3_ENTERPRISE’, ‘WPA3_PERSONAL’, ‘WPA2_WPA3_PERSONAL’ and ‘WPA2_WPA3_ENTERPRISE’.
- **sessionTimeout** (*integer*) – Wireless’s Session Time Out .
- **trafficType** (*string*) – Wireless’s Traffic Type Enum (voicedata or data) . Available values are ‘voicedata’ and ‘data’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_enterprise_ssid(*ssid_name*, *headers=None*, ***request_parameters*)

Deletes given enterprise SSID .

Parameters

- **ssid_name** (*basestring*) – ssidName path parameter. Enter the SSID name to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_wireless_profile(*wireless_profile_name*, *headers=None*, ***request_parameters*)

Delete the Wireless Profile from Cisco DNA Center whose name is provided. .

Parameters

- **wireless_profile_name** (*basestring*) – wirelessProfileName path parameter. Wireless Profile Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

ap_provision(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Access Point Provision and ReProvision .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_update_dynamic_interface(*interfaceName=None, vlanId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to create or update an dynamic interface .

Parameters

- **interfaceName** (*string*) – Wireless’s dynamic-interface name .
- **vlanId** (*number*) – Wireless’s Vlan Id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_dynamic_interface(*interface_name=None, headers=None, **request_parameters*)

Get one or all dynamic interface(s) .

Parameters

- **interface_name** (*basestring*) – interface-name query parameter. dynamic-interface name, if not specified all the existing dynamic interfaces will be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_dynamic_interface(*interface_name, headers=None, **request_parameters*)

Delete a dynamic interface .

Parameters

- **interface_name** (*basestring*) – interfaceName path parameter. valid interface-name to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_wireless_profile(*profileDetails=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates the wireless Network Profile with updated details provided. All sites to be present in the network profile should be provided. .

Parameters

- **profileDetails** (*object*) – Wireless's profileDetails.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_wireless_profile(*profileDetails=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Creates Wireless Network Profile on Cisco DNA Center and associates sites and SSIDs to it. .

Parameters

- **profileDetails** (*object*) – Wireless's profileDetails.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

get_wireless_profile(*profile_name=None, headers=None, **request_parameters*)

Gets either one or all the wireless network profiles if no name is provided for network-profile. .

Parameters

- **profile_name** (*basestring*) – profileName query parameter. Wireless Network Profile Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

provision_update(*headers=None, payload=None, active_validation=True, **request_parameters*)

Updates wireless provisioning .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

provision(*headers=None, payload=None, active_validation=True, **request_parameters*)

Provision wireless devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

psk_override(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update/override pass phrase of enterprise SSID .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

retrieve_rf_profiles(*rf_profile_name=None, headers=None, **request_parameters*)

Retrieve all RF profiles .

Parameters

- **rf_profile_name** (*basestring*) – rf-profile-name query parameter. RF Profile Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

create_or_update_rf_profile(*channelWidth=None, defaultRfProfile=None, enableBrownField=None, enableCustom=None, enableRadioTypeA=None, enableRadioTypeB=None, enableRadioTypeC=None, name=None, radioTypeAProperties=None, radioTypeBProperties=None, radioTypeCProperties=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Create or Update RF profile .

Parameters

- **channelWidth** (*string*) – Wireless's Channel Width .
- **defaultRfProfile** (*boolean*) – Wireless's is Default Rf Profile .
- **enableBrownField** (*boolean*) – Wireless's Enable Brown Field .
- **enableCustom** (*boolean*) – Wireless's Enable Custom .
- **enableRadioTypeA** (*boolean*) – Wireless's Enable Radio Type A .
- **enableRadioTypeB** (*boolean*) – Wireless's Enable Radio Type B .
- **enableRadioTypeC** (*boolean*) – Wireless's Enable Radio Type C (6GHz) .
- **name** (*string*) – Wireless's RF Profile Name .
- **radioTypeAProperties** (*object*) – Wireless's radioTypeAProperties.
- **radioTypeBProperties** (*object*) – Wireless's radioTypeBProperties.
- **radioTypeCProperties** (*object*) – Wireless's radioTypeCProperties.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

delete_rf_profiles(*rf_profile_name*, *headers=None*, ***request_parameters*)

Delete RF profile(s) .

Parameters

- **rf_profile_name** (*basestring*) – rfProfileName path parameter. RF profile name to be deleted(required) non- custom RF profile cannot be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

DNACenterAPI v2.3.5.3

application_policy

class ApplicationPolicy

Cisco DNA Center Application Policy API (version: 2.3.5.3).

Wraps the DNA Center Application Policy API and exposes the API as native Python methods that return native Python objects.

get_application_policy(*policy_scope=None, headers=None, **request_parameters*)

Get all existing application policies .

Parameters

- **policy_scope** (*basestring*) – policyScope query parameter. policy scope name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-application-policy>

get_application_policy_default(*headers=None, **request_parameters*)

Get default application policy .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-application-policy-default>

application_policy_intent(*createList=None, deleteList=None, updateList=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Create/Update/Delete application policy .

Parameters

- **createList** (*list*) – Application Policy’s createList (list of objects).
- **deleteList** (*list*) – Application Policy’s Delete list of Group Based Policy ids (list of strings).
- **updateList** (*list*) – Application Policy’s updateList (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!application-policy-intent>

get_application_policy_queuing_profile(*name=None, headers=None, **request_parameters*)

Get all or by name, existing application policy queuing profiles .

Parameters

- **name** (*basestring*) – name query parameter. queuing profile name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-application-policy-queuing-profile>

update_application_policy_queuing_profile(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update existing custom application queuing profile .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-application-policy-queuing-profile>

create_application_policy_queuing_profile(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create new custom application queuing profile .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-application-policy-queuing-profile>

get_application_policy_queuing_profile_count(*headers=None, **request_parameters*)

Get the number of all existing application policy queuing profile .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-application-policy-queuing-profile-count>

delete_application_policy_queuing_profile(*id, headers=None, **request_parameters*)

Delete existing custom application policy queuing profile by id .

Parameters

- **id** (*basestring*) – id path parameter. Id of custom queuing profile to delete .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-application-policy-queuing-profile>

get_application_sets(*limit=None, name=None, offset=None, headers=None, **request_parameters*)

Get application-sets by offset/limit or by name .

Parameters

- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **name** (*basestring*) – name query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-application-sets>

delete_application_set(*id, headers=None, **request_parameters*)

Delete existing application-set by it's id .

Parameters

- **id** (*basestring*) – id query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-application-set>

create_application_set(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create new custom application-set/s .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-application-set>

get_application_sets_count(*headers=None, **request_parameters*)

Get the number of existing application-sets .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-application-sets-count>

create_application(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create new Custom application .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-application>

edit_application(*headers=None, payload=None, active_validation=True, **request_parameters*)

Edit the attributes of an existing application .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!edit-application>

delete_application(*id*, *headers=None*, ***request_parameters*)

Delete existing application by its id .

Parameters

- **id** (*basestring*) – id query parameter. Application's Id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-application>

get_applications(*limit=None*, *name=None*, *offset=None*, *headers=None*, ***request_parameters*)

Get applications by offset/limit or by name .

Parameters

- **offset** (*int*) – offset query parameter. The offset of the first application to be returned .
- **limit** (*int*) – limit query parameter. The maximum number of applications to be returned .
- **name** (*basestring*) – name query parameter. Application's name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-applications>

get_applications_count(*headers=None, **request_parameters*)

Get the number of all existing applications .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-applications-count>

get_qos_device_interface_info(*network_device_id=None, headers=None, **request_parameters*)

Get all or by network device id, existing qos device interface infos .

Parameters

- **network_device_id** (*basestring*) – networkDeviceId query parameter. network device id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-qos-device-interface-info>

update_qos_device_interface_info(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update existing qos device interface infos associate with network device id .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-qos-device-interface-info>

create_qos_device_interface_info(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create qos device interface infos associate with network device id to allow the user to mark specific interfaces as WAN, to associate WAN interfaces with specific SP Profile and to be able to define a shaper on WAN interfaces .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-qos-device-interface-info>

get_qos_device_interface_info_count(*headers=None, **request_parameters*)

Get the number of all existing qos device interface infos group by network device id .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/get-qos-device-interface-info-count>

delete_qos_device_interface_info(*id, headers=None, **request_parameters*)

Delete all qos device interface infos associate with network device id .

Parameters

- **id** (*basestring*) – id path parameter. Id of the qos device info, this object holds all qos device interface infos associate with network device id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/delete-qos-device-interface-info>

applications

class Applications

Cisco DNA Center Applications API (version: 2.3.5.3).

Wraps the DNA Center Applications API and exposes the API as native Python methods that return native Python objects.

applications(*application_health=None, application_name=None, device_id=None, end_time=None, limit=None, mac_address=None, offset=None, site_id=None, start_time=None, headers=None, **request_parameters*)

Intent API to get a list of applications for a specific site, a device, or a client device's MAC address. For a combination of a specific application with site and/or device the API gets list of issues/devices/endpoints. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Assurance site UUID value (Cannot be submitted together with deviceId and clientMac) .
- **device_id** (*basestring*) – deviceId query parameter. Assurance device UUID value (Cannot be submitted together with siteId and clientMac) .
- **mac_address** (*basestring*) – macAddress query parameter. Client device's MAC address (Cannot be submitted together with siteId and deviceId) .
- **start_time** (*int*) – startTime query parameter. Starting epoch time in milliseconds of time window .
- **end_time** (*int*) – endTime query parameter. Ending epoch time in milliseconds of time window .
- **application_health** (*basestring*) – applicationHealth query parameter. Application health category (POOR, FAIR, or GOOD. Optionally use with siteId only) .
- **offset** (*int*) – offset query parameter. The offset of the first application in the returned data (optionally used with siteId only) .
- **limit** (*int*) – limit query parameter. The max number of application entries in returned data [1, 1000] (optionally used with siteId only) .
- **application_name** (*basestring*) – applicationName query parameter. The name of the application to get information on .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!applications>

authentication_management**class AuthenticationManagement**

Cisco DNA Center Authentication Management API (version: 2.3.5.3).

Wraps the DNA Center Authentication Management API and exposes the API as native Python methods that return native Python objects.

```
import_certificate(multipart_fields, multipart_monitor_callback, list_of_users=None,
                   pk_password=None, headers=None, **request_parameters)
```

This method is used to upload a certificate .

The following code gives an example of the multipart_fields.

```
multipart_fields={'file': ('file.zip', open('file.zip', 'rb'))}
multipart_fields={'file': ('file.txt', open('file.txt', 'rb'),
                           'text/plain',
                           {'X-My-Header': 'my-value'})}
multipart_fields=[('images', ('foo.png', open('foo.png', 'rb'),
                              'image/png')),
                  ('images', ('bar.png', open('bar.png', 'rb'), 'image/png'))]
```

The following example demonstrates how to use `multipart_monitor_callback=create_callback` to create a progress bar using clint.

```
from clint.textui.progress import Bar
def create_callback(encoder):
    encoder_len = encoder.len
    bar = Bar(expected_size=encoder_len,
              filled_char="=")
    def callback(monitor):
        bar.show(monitor.bytes_read)
    return callback
```

Parameters

- **pk_password** (*basestring*) – pkPassword query parameter. Private Key Password .
- **list_of_users** (*basestring, list, set, tuple*) – listOfUsers query parameter.
- **multipart_fields** (*dict*) – Fields from which to create a multipart/form-data body.
- **multipart_monitor_callback** (*function*) – function used to monitor the progress of the upload.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!import-certificate>

```
import_certificate_p12(multipart_fields, multipart_monitor_callback, list_of_users=None,
                      p12_password=None, pk_password=None, headers=None,
                      **request_parameters)
```

This method is used to upload a PKCS#12 file .

The following code gives an example of the multipart_fields.

```
multipart_fields={'file': ('file.zip', open('file.zip', 'rb'))}
multipart_fields={'file': ('file.txt', open('file.txt', 'rb'),
                          'text/plain',
                          {'X-My-Header': 'my-value'})}
multipart_fields=[('images', ('foo.png', open('foo.png', 'rb'),
                              'image/png')),
                 ('images', ('bar.png', open('bar.png', 'rb'), 'image/png'))]
```

The following example demonstrates how to use *multipart_monitor_callback=create_callback* to create a progress bar using clint.

```
from clint.textui.progress import Bar
def create_callback(encoder):
    encoder_len = encoder.len
    bar = Bar(expected_size=encoder_len,
              filled_char="=")
    def callback(monitor):
        bar.show(monitor.bytes_read)
    return callback
```

Parameters

- **p12_password** (*basestring*) – p12Password query parameter. P12 Passsword .
- **pk_password** (*basestring*) – pkPassword query parameter. Private Key Password .
- **list_of_users** (*basestring*, *list*, *set*, *tuple*) – listOfUsers query parameter.
- **multipart_fields** (*dict*) – Fields from which to create a multipart/form-data body.
- **multipart_monitor_callback** (*function*) – function used to monitor the progress of the upload.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!import-certificate-p12>

authentication_api(*headers=None, **request_parameters*)

API to obtain an access token, which remains valid for 1 hour. The token obtained using this API is required to be set as value to the X-Auth-Token HTTP Header for all API calls to Cisco DNA Center. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!authentication-api>

cisco_dna_center_system**class CiscoDnaCenterSystem**

Cisco DNA Center Cisco DNA Center System API (version: 2.3.5.3).

Wraps the DNA Center Cisco DNA Center System API and exposes the API as native Python methods that return native Python objects.

authorize_device(*deviceIdList=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Authorizes one of more devices. A device can only be authorized if Authorization is set in Device Settings.

.

Parameters

- **deviceIdList** (*list*) – Cisco DNA Center System’s Device Id List (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!authorize-device>

clients

class Clients

Cisco DNA Center Clients API (version: 2.3.5.3).

Wraps the DNA Center Clients API and exposes the API as native Python methods that return native Python objects.

get_client_detail(*mac_address*, *timestamp=None*, *headers=None*, ***request_parameters*)

Returns detailed Client information retrieved by Mac Address for any given point of time. .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the Client health data is required .
- **mac_address** (*basestring*) – macAddress query parameter. MAC Address of the client .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-client-detail>

get_client_enrichment_details(*headers=None, **request_parameters*)

Enriches a given network End User context (a network user-id or end user's device Mac Address) with details about the user, the devices that the user is connected to and the assurance issues that the user is impacted by .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-client-enrichment-details>

get_overall_client_health(*timestamp=None, headers=None, **request_parameters*)

Returns Overall Client Health information by Client type (Wired and Wireless) for any given point of time .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the Client health data is required .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-overall-client-health>

client_proximity(*username*, *number_days=None*, *time_resolution=None*, *headers=None*,
***request_parameters*)

This intent API will provide client proximity information for a specific wireless user. Proximity is defined as presence on the same floor at the same time as the specified wireless user. The Proximity workflow requires the subscription to the following event (via the Event Notification workflow) prior to making this API call: NETWORK-CLIENTS-3-506 Client Proximity Report. .

Parameters

- **username** (*basestring*) – username query parameter. Wireless client username for which proximity information is required .
- **number_days** (*int*) – number_days query parameter. Number of days to track proximity until current date. Defaults and maximum up to 14 days. .
- **time_resolution** (*int*) – time_resolution query parameter. Time interval (in minutes) to measure proximity. Defaults to 15 minutes with a minimum 5 minutes. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!client-proximity>

command_runner**class CommandRunner**

Cisco DNA Center Command Runner API (version: 2.3.5.3).

Wraps the DNA Center Command Runner API and exposes the API as native Python methods that return native Python objects.

get_all_keywords_of_clis_accepted(*headers=None*, ***request_parameters*)

Get valid keywords .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-all-keywords-of-clis-accepted>

```
run_read_only_commands_on_devices(commands=None, description=None, deviceUuids=None,
                                  name=None, timeout=None, headers=None, payload=None,
                                  active_validation=True, **request_parameters)
```

Submit request for read-only CLIs .

Parameters

- **commands** (*list*) – Command Runner's commands (list of strings).
- **description** (*string*) – Command Runner's description.
- **deviceUuids** (*list*) – Command Runner's deviceUuids (list of strings).
- **name** (*string*) – Command Runner's name.
- **timeout** (*integer*) – Command Runner's timeout.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!run-read-only-commands-on-devices>

compliance

class Compliance

Cisco DNA Center Compliance API (version: 2.3.5.3).

Wraps the DNA Center Compliance API and exposes the API as native Python methods that return native Python objects.

get_compliance_status(*compliance_status=None, device_uuid=None, limit=None, offset=None, headers=None, **request_parameters*)

Return compliance status of device(s). .

Parameters

- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can be have value among 'COMPLIANT', 'NON_COMPLIANT', 'IN_PROGRESS', 'ERROR' .
- **device_uuid** (*basestring*) – deviceUuid query parameter. Comma separated deviceU-uids .
- **offset** (*int*) – offset query parameter. offset/starting row .
- **limit** (*int*) – limit query parameter. Number of records to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link: <https://developer.cisco.com/docs/dna-center/#!/get-compliance-status>

get_compliance_status(*compliance_status=None, device_uuid=None, limit=None, offset=None, headers=None, **request_parameters*)

Return compliance status of device(s). .

Parameters

- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can be have value among 'COMPLIANT', 'NON_COMPLIANT', 'IN_PROGRESS', 'ERROR' .
- **device_uuid** (*basestring*) – deviceUuid query parameter. Comma separated deviceU-uids .
- **offset** (*int*) – offset query parameter. offset/starting row .
- **limit** (*int*) – limit query parameter. Number of records to be retrieved .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-compliance-status>

run_compliance(*categories=None, deviceUuids=None, triggerFull=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Run compliance check for device(s). .

Parameters

- **categories** (*list*) – Compliance's categories (list of strings).
- **deviceUuids** (*list*) – Compliance's deviceUuids (list of strings).
- **triggerFull** (*boolean*) – Compliance's triggerFull.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!run-compliance>

get_compliance_status_count(*compliance_status=None, headers=None, **request_parameters*)

Return Compliance Status Count .

Parameters

- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can have value among ‘COMPLIANT’, ‘NON_COMPLIANT’, ‘IN_PROGRESS’, ‘NOT_AVAILABLE’, ‘NOT_APPLICABLE’, ‘ERROR’ .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-compliance-status-count>

get_compliance_detail(*compliance_status=None, compliance_type=None, device_uuid=None, limit=None, offset=None, headers=None, **request_parameters*)

Return Compliance Detail .

Parameters

- **compliance_type** (*basestring*) – complianceType query parameter. complianceType can have any value among ‘NETWORK_PROFILE’, ‘IMAGE’, ‘APPLICATION_VISIBILITY’, ‘FABRIC’, ‘PSIRT’, ‘RUNNING_CONFIG’, ‘WORKFLOW’ .
- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can have value among ‘COMPLIANT’, ‘NON_COMPLIANT’, ‘IN_PROGRESS’, ‘NOT_AVAILABLE’, ‘NOT_APPLICABLE’, ‘ERROR’ .
- **device_uuid** (*basestring*) – deviceUuid query parameter. Comma separated deviceUuids .
- **offset** (*int*) – offset query parameter. offset/starting row .
- **limit** (*int*) – limit query parameter. Number of records to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-compliance-detail>

get_compliance_detail_count(*compliance_status=None, compliance_type=None, headers=None, **request_parameters*)

Return Compliance Count Detail .

Parameters

- **compliance_type** (*basestring*) – complianceType query parameter. complianceType can have any value among 'NETWORK_PROFILE', 'IMAGE', 'APPLICATION_VISIBILITY', 'FABRIC', 'PSIRT', 'RUNNING_CONFIG', 'WORKFLOW' .
- **compliance_status** (*basestring*) – complianceStatus query parameter. Compliance status can have value among 'COMPLIANT', 'NON_COMPLIANT', 'IN_PROGRESS', 'NOT_AVAILABLE', 'NOT_APPLICABLE', 'ERROR' .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-compliance-detail-count>

device_compliance_status(*device_uuid, headers=None, **request_parameters*)

Return compliance status of a device. .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!device-compliance-status>

compliance_details_of_device(*device_uuid*, *category=None*, *compliance_type=None*, *diff_list=None*, *key=None*, *value=None*, *headers=None*, ***request_parameters*)

Return compliance detailed report for a device. .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter.
- **category** (*basestring*) – category query parameter. complianceCategory can have any value among 'INTENT', 'RUNNING_CONFIG' .
- **compliance_type** (*basestring*) – complianceType query parameter. complianceType can have any value among 'NETWORK_DESIGN', 'NETWORK_PROFILE', 'FABRIC', 'POLICY', 'RUNNING_CONFIG' .
- **diff_list** (*bool*) – diffList query parameter. diff list [pass true to fetch the diff list] .
- **key** (*basestring*) – key query parameter. extended attribute key .
- **value** (*basestring*) – value query parameter. extended attribute value .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!compliance-details-of-device>

configuration_archive

class ConfigurationArchive

Cisco DNA Center Configuration Archive API (version: 2.3.5.3).

Wraps the DNA Center Configuration Archive API and exposes the API as native Python methods that return native Python objects.

export_device_configurations(*deviceId=None, password=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Export Device configurations to an encrypted zip file. .

Parameters

- **deviceId** (*list*) – Configuration Archive’s Device Id (list of strings).
- **password** (*string*) – Configuration Archive’s Password.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!export-device-configurations>

configuration_templates

class ConfigurationTemplates

Cisco DNA Center Configuration Templates API (version: 2.3.5.3).

Wraps the DNA Center Configuration Templates API and exposes the API as native Python methods that return native Python objects.

clone_given_template(*name, project_id, template_id, headers=None, **request_parameters*)

API to clone template .

Parameters

- **name** (*basestring*) – name path parameter. Template name to clone template(Name should be different than existing template name within same project) .

- **template_id** (*basestring*) – templateId path parameter. UUID of the template to clone it .
- **project_id** (*basestring*) – projectId path parameter.
- **project_id** – projectId query parameter. UUID of the project in which the template needs to be created .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!clone-given-template>

```
create_project(createTime=None, description=None, id=None, lastUpdateTime=None, name=None,
               tags=None, templates=None, headers=None, payload=None, active_validation=True,
               **request_parameters)
```

This API is used to create a new project. .

Parameters

- **createTime** (*integer*) – Configuration Templates's Create time of project .
- **description** (*string*) – Configuration Templates's Description of project .
- **id** (*string*) – Configuration Templates's UUID of project .
- **lastUpdateTime** (*integer*) – Configuration Templates's Update time of project .
- **name** (*string*) – Configuration Templates's Name of project .
- **tags** (*list*) – Configuration Templates's tags (list of objects).
- **templates** (*object*) – Configuration Templates's List of templates within the project .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!create-project>

update_project(*createTime=None, description=None, id=None, lastUpdateTime=None, name=None, tags=None, templates=None, headers=None, payload=None, active_validation=True, **request_parameters*)

This API is used to update an existing project. .

Parameters

- **createTime** (*integer*) – Configuration Templates's Create time of project .
- **description** (*string*) – Configuration Templates's Description of project .
- **id** (*string*) – Configuration Templates's UUID of project .
- **lastUpdateTime** (*integer*) – Configuration Templates's Update time of project .
- **name** (*string*) – Configuration Templates's Name of project .
- **tags** (*list*) – Configuration Templates's tags (list of objects).
- **templates** (*object*) – Configuration Templates's List of templates within the project .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!update-project>

get_projects(*name=None, sort_order=None, headers=None, **request_parameters*)

List the projects .

Parameters

- **name** (*basestring*) – name query parameter. Name of project to be searched .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-projects>

imports_the_projects_provided(*do_version=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Imports the Projects provided in the DTO .

Parameters

- **do_version** (*bool*) – doVersion query parameter. If this flag is true then it creates a new version of the template with the imported contents in case if the templates already exists. ” If this flag is false and if template already exists, then operation fails with ‘Template already exists’ error .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** ((*list*, *dict*)) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!imports-the-projects-provided>

export_projects(*headers=None, payload=None, active_validation=True, **request_parameters*)

Exports the projects for given projectNames. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!export-projects>

imports_the_templates_provided(*project_name, author=None, composite=None, containingTemplates=None, createTime=None, customParamsOrder=None, description=None, deviceTypes=None, do_version=None, failurePolicy=None, id=None, language=None, lastUpdateTime=None, latestVersionTime=None, name=None, parentTemplateId=None, projectId=None, projectName=None, rollbackTemplateContent=None, rollbackTemplateParams=None, softwareType=None, softwareVariant=None, softwareVersion=None, tags=None, templateContent=None, templateParams=None, validationErrors=None, version=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Imports the templates provided in the DTO by project Name .

Parameters

- **author** (*string*) – Configuration Templates's Author of template .
- **composite** (*boolean*) – Configuration Templates's Is it composite template .
- **containingTemplates** (*list*) – Configuration Templates's containingTemplates (list of objects).
- **createTime** (*integer*) – Configuration Templates's Create time of template .

- **customParamsOrder** (*boolean*) – Configuration Templates’s Custom Params Order .
- **description** (*string*) – Configuration Templates’s Description of template .
- **deviceTypes** (*list*) – Configuration Templates’s deviceTypes (list of objects).
- **failurePolicy** (*string*) – Configuration Templates’s Define failure policy if template provisioning fails . Available values are ‘ABORT_ON_ERROR’, ‘CONTINUE_ON_ERROR’, ‘ROLLBACK_ON_ERROR’, ‘ROLLBACK_TARGET_ON_ERROR’ and ‘ABORT_TARGET_ON_ERROR’.
- **id** (*string*) – Configuration Templates’s UUID of template .
- **language** (*string*) – Configuration Templates’s Template language (JINJA or VELOCITY) .
- **lastUpdateTime** (*integer*) – Configuration Templates’s Update time of template .
- **latestVersionTime** (*integer*) – Configuration Templates’s Latest versioned template time .
- **name** (*string*) – Configuration Templates’s Name of template .
- **parentTemplateId** (*string*) – Configuration Templates’s Parent templateID .
- **projectId** (*string*) – Configuration Templates’s Project UUID .
- **projectName** (*string*) – Configuration Templates’s Project name .
- **rollbackTemplateContent** (*string*) – Configuration Templates’s Rollback template content .
- **rollbackTemplateParams** (*list*) – Configuration Templates’s rollbackTemplateParams (list of objects).
- **softwareType** (*string*) – Configuration Templates’s Applicable device software type .
- **softwareVariant** (*string*) – Configuration Templates’s Applicable device software variant .
- **softwareVersion** (*string*) – Configuration Templates’s Applicable device software version .
- **tags** (*list*) – Configuration Templates’s tags (list of objects).
- **templateContent** (*string*) – Configuration Templates’s Template content .
- **templateParams** (*list*) – Configuration Templates’s templateParams (list of objects).
- **validationErrors** (*object*) – Configuration Templates’s validationErrors.
- **version** (*string*) – Configuration Templates’s Current version of template .
- **project_name** (*basestring*) – projectName path parameter. Project name to create template under the project .
- **do_version** (*bool*) – doVersion query parameter. If this flag is true then it creates a new version of the template with the imported contents in case if the templates already exists. ” If this flag is false and if template already exists, then operation fails with ‘Template already exists’ error .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!imports-the-templates-provided>

get_project_details(*project_id*, *headers=None*, ***request_parameters*)

Get the details of the given project by its id. .

Parameters

- **project_id** (*basestring*) – projectId path parameter. projectId(UUID) of project to get project details .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-project-details>

deletes_the_project(*project_id*, *headers=None*, ***request_parameters*)

Deletes the project by its id .

Parameters

- **project_id** (*basestring*) – projectId path parameter. projectId(UUID) of project to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!deletes-the-project>

```
create_template(project_id, author=None, composite=None, containingTemplates=None,
                 createTime=None, customParamsOrder=None, description=None, deviceTypes=None,
                 failurePolicy=None, id=None, language=None, lastUpdateTime=None,

                 headers=None, payload=None, active_validation=True, **request_parameters)
```

API to create a template by project id. .

Parameters

- **author** (*string*) – Configuration Templates's Author of template .
- **composite** (*boolean*) – Configuration Templates's Is it composite template .
- **containingTemplates** (*list*) – Configuration Templates's containingTemplates (list of objects).
- **createTime** (*integer*) – Configuration Templates's Create time of template .
- **customParamsOrder** (*boolean*) – Configuration Templates's Custom Params Order .
- **description** (*string*) – Configuration Templates's Description of template .
- **deviceTypes** (*list*) – Configuration Templates's deviceTypes (list of objects).
- **failurePolicy** (*string*) – Configuration Templates's Define failure policy if template provisioning fails . Available values are 'ABORT_ON_ERROR', 'CONTINUE_ON_ERROR', 'ROLLBACK_ON_ERROR', 'ROLLBACK_TARGET_ON_ERROR' and 'ABORT_TARGET_ON_ERROR'.
- **id** (*string*) – Configuration Templates's UUID of template .
- **language** (*string*) – Configuration Templates's Template language (JINJA or VELOCITY) .
- **lastUpdateTime** (*integer*) – Configuration Templates's Update time of template .
- **latestVersionTime** (*integer*) – Configuration Templates's Latest versioned template time .
- **name** (*string*) – Configuration Templates's Name of template .

- **parentTemplateId** (*string*) – Configuration Templates’s Parent templateID .
- **projectId** (*string*) – Configuration Templates’s Project UUID .
- **projectName** (*string*) – Configuration Templates’s Project name .
- **rollbackTemplateContent** (*string*) – Configuration Templates’s Rollback template content .
- **rollbackTemplateParams** (*list*) – Configuration Templates’s rollbackTemplateParams (list of objects).
- **softwareType** (*string*) – Configuration Templates’s Applicable device software type .
- **softwareVariant** (*string*) – Configuration Templates’s Applicable device software variant .
- **softwareVersion** (*string*) – Configuration Templates’s Applicable device software version .
- **tags** (*list*) – Configuration Templates’s tags (list of objects).
- **templateContent** (*string*) – Configuration Templates’s Template content .
- **templateParams** (*list*) – Configuration Templates’s templateParams (list of objects).
- **validationErrors** (*object*) – Configuration Templates’s validationErrors.
- **version** (*string*) – Configuration Templates’s Current version of template .
- **project_id** (*basestring*) – projectId path parameter. UUID of the project in which the template needs to be created .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-template>

```
gets_the_templates_available(filter_conflicting_templates=None, product_family=None,
                             product_series=None, product_type=None, project_id=None,
                             project_names=None, software_type=None, software_version=None,

                             **request_parameters)
```

List the templates available .

Parameters

- **project_id** (*basestring*) – projectId query parameter. Filter template(s) based on project UUID .
- **software_type** (*basestring*) – softwareType query parameter. Filter template(s) based software type .
- **software_version** (*basestring*) – softwareVersion query parameter. Filter template(s) based softwareVersion .
- **product_family** (*basestring*) – productFamily query parameter. Filter template(s) based on device family .
- **product_series** (*basestring*) – productSeries query parameter. Filter template(s) based on device series .
- **product_type** (*basestring*) – productType query parameter. Filter template(s) based on device type .
- **filter_conflicting_templates** (*bool*) – filterConflictingTemplates query parameter. Filter template(s) based on confliting templates .
- **tags** (*basestring*, *list*, *set*, *tuple*) – tags query parameter. Filter template(s) based on tags .
- **project_names** (*basestring*, *list*, *set*, *tuple*) – projectNames query parameter. Filter template(s) based on project names .
- **un_committed** (*bool*) – unCommitted query parameter. Filter template(s) based on template committed or not .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

deploy_template(*forcePushTemplate=None, isComposite=None, mainTemplateId=None, memberTemplateDeploymentInfo=None, targetInfo=None, templateId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to deploy a template. .

Parameters

- **forcePushTemplate** (*boolean*) – Configuration Templates’s forcePushTemplate.
- **isComposite** (*boolean*) – Configuration Templates’s Composite template flag .
- **mainTemplateId** (*string*) – Configuration Templates’s Main template UUID of versioned template .
- **memberTemplateDeploymentInfo** (*string*) – Configuration Templates’s memberTemplateDeploymentInfo .
- **targetInfo** (*list*) – Configuration Templates’s targetInfo (list of objects).
- **templateId** (*string*) – Configuration Templates’s UUID of template to be provisioned .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!deploy-template>

get_template_deployment_status(*deployment_id*, *headers=None*, ***request_parameters*)

API to retrieve the status of template deployment. .

Parameters

- **deployment_id** (*basestring*) – deploymentId path parameter. UUID of deployment to retrieve template deployment status .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-template-deployment-status>

export_templates(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Exports the templates for given templateIds. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!export-templates>

preview_template(*deviceId=None, params=None, resourceParams=None, templateId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to preview a template. .

Parameters

- **deviceId** (*string*) – Configuration Templates's UUID of device to get template preview .
- **params** (*object*) – Configuration Templates's Params to render preview .
- **resourceParams** (*object*) – Configuration Templates's Resource params to render preview .
- **templateId** (*string*) – Configuration Templates's UUID of template to get template preview .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!preview-template>

version_template(*comments=None, templateId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to version the current contents of the template. .

Parameters

- **comments** (*string*) – Configuration Templates’s Template version comments .
- **templateId** (*string*) – Configuration Templates’s UUID of template .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/version-template>

get_template_versions(*template_id, headers=None, **request_parameters*)

Get all the versions of template by its id .

Parameters

- **template_id** (*basestring*) – templateId path parameter. templateId(UUID) to get list of versioned templates .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-template-versions>

deletes_the_template(*template_id*, *headers=None*, ***request_parameters*)

Deletes the template by its id .

Parameters

- **template_id** (*basestring*) – templateId path parameter. templateId(UUID) of template to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!deletes-the-template>

get_template_details(*template_id*, *latest_version=None*, *headers=None*, ***request_parameters*)

Details of the template by its id .

Parameters

- **template_id** (*basestring*) – templateId path parameter. TemplateId(UUID) to get details of the template .
- **latest_version** (*bool*) – latestVersion query parameter. latestVersion flag to get the latest versioned template .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-template-details>

get_projects_details(*id=None, limit=None, name=None, offset=None, sort_order=None, headers=None, **request_parameters*)

Get project(s) details .

Parameters

- **id** (*basestring*) – id query parameter. Id of project to be searched .
- **name** (*basestring*) – name query parameter. Name of project to be searched .
- **offset** (*int*) – offset query parameter. Index of first result .
- **limit** (*int*) – limit query parameter. Limits number of results .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (dsc) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-projects-details>

get_templates_details(*all_template_attributes=None, filter_conflicting_templates=None, id=None, include_version_details=None, limit=None, name=None, offset=None, product_family=None, product_series=None, product_type=None, project_id=None, project_name=None, software_type=None, software_version=None, sort_order=None, tags=None, un_committed=None, headers=None, **request_parameters*)

Get template(s) details .

Parameters

- **id** (*basestring*) – id query parameter. Id of template to be searched .
- **name** (*basestring*) – name query parameter. Name of template to be searched .
- **project_id** (*basestring*) – projectId query parameter. Filter template(s) based on project id .
- **project_name** (*basestring*) – projectName query parameter. Filter template(s) based on project name .

- **software_type** (*basestring*) – softwareType query parameter. Filter template(s) based software type .
- **software_version** (*basestring*) – softwareVersion query parameter. Filter template(s) based softwareVersion .
- **product_family** (*basestring*) – productFamily query parameter. Filter template(s) based on device family .
- **product_series** (*basestring*) – productSeries query parameter. Filter template(s) based on device series .
- **product_type** (*basestring*) – productType query parameter. Filter template(s) based on device type .
- **filter_conflicting_templates** (*bool*) – filterConflictingTemplates query parameter. Filter template(s) based on confliting templates .
- **tags** (*basestring, list, set, tuple*) – tags query parameter. Filter template(s) based on tags .
- **un_committed** (*bool*) – unCommitted query parameter. Return uncommitted template .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (dsc) .
- **all_template_attributes** (*bool*) – allTemplateAttributes query parameter. Return all template attributes .
- **include_version_details** (*bool*) – includeVersionDetails query parameter. Include template version details .
- **offset** (*int*) – offset query parameter. Index of first result .
- **limit** (*int*) – limit query parameter. Limits number of results .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/get-templates-details>

```
deploy_template_v2(forcePushTemplate=None, isComposite=None, mainTemplateId=None,
                    memberTemplateDeploymentInfo=None, targetInfo=None, templateId=None,
                    headers=None, payload=None, active_validation=True, **request_parameters)
```

V2 API to deploy a template. .

Parameters

- **forcePushTemplate** (*boolean*) – Configuration Templates’s forcePushTemplate.
- **isComposite** (*boolean*) – Configuration Templates’s Composite template flag .
- **mainTemplateId** (*string*) – Configuration Templates’s Main template UUID of versioned template .
- **memberTemplateDeploymentInfo** (*string*) – Configuration Templates’s memberTemplateDeploymentInfo .
- **targetInfo** (*list*) – Configuration Templates’s targetInfo (list of objects).
- **templateId** (*string*) – Configuration Templates’s UUID of template to be provisioned .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!deploy-template-v2>

device_onboarding_pnp**class DeviceOnboardingPnp**

Cisco DNA Center Device Onboarding (PnP) API (version: 2.3.5.3).

Wraps the DNA Center Device Onboarding (PnP) API and exposes the API as native Python methods that return native Python objects.

```
add_device(_id=None, deviceInfo=None, runSummaryList=None, systemResetWorkflow=None,
            systemWorkflow=None, tenantId=None, version=None, workflow=None,
            workflowParameters=None, headers=None, payload=None, active_validation=True,
            **request_parameters)
```

Adds a device to the PnP database. .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)’s _id.
- **deviceInfo** (*object*) – Device Onboarding (PnP)’s deviceInfo.

- **runSummaryList** (*list*) – Device Onboarding (PnP)’s runSummaryList (list of objects).
- **systemResetWorkflow** (*object*) – Device Onboarding (PnP)’s systemResetWorkflow.
- **systemWorkflow** (*object*) – Device Onboarding (PnP)’s systemWorkflow.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **version** (*integer*) – Device Onboarding (PnP)’s version.
- **workflow** (*object*) – Device Onboarding (PnP)’s workflow.
- **workflowParameters** (*object*) – Device Onboarding (PnP)’s workflowParameters.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-device>

```
get_device_list(cm_state=None, hostname=None, last_contact=None, limit=None, mac_address=None,
                name=None, offset=None, onb_state=None, pid=None, project_id=None,
                project_name=None, serial_number=None, site_name=None, smart_account_id=None,
                sort=None, sort_order=None, source=None, state=None, virtual_account_id=None,
                workflow_id=None, workflow_name=None, headers=None, **request_parameters)
```

Returns list of devices based on filter criteria. If a limit is not specified, it will default to return 50 devices. Pagination and sorting are also supported by this endpoint .

Parameters

- **limit** (*int*) – limit query parameter. Limits number of results .
- **offset** (*int*) – offset query parameter. Index of first result .
- **sort** (*basestring*, *list*, *set*, *tuple*) – sort query parameter. Comma seperated list of fields to sort on .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **serial_number** (*basestring*, *list*, *set*, *tuple*) – serialNumber query parameter. Device Serial Number .
- **state** (*basestring*, *list*, *set*, *tuple*) – state query parameter. Device State .

- **onb_state** (*basestring*, *list*, *set*, *tuple*) – onbState query parameter. Device Onboarding State .
- **cm_state** (*basestring*, *list*, *set*, *tuple*) – cmState query parameter. Device Connection Manager State .
- **name** (*basestring*, *list*, *set*, *tuple*) – name query parameter. Device Name .
- **pid** (*basestring*, *list*, *set*, *tuple*) – pid query parameter. Device ProductId .
- **source** (*basestring*, *list*, *set*, *tuple*) – source query parameter. Device Source .
- **project_id** (*basestring*, *list*, *set*, *tuple*) – projectId query parameter. Device Project Id .
- **workflow_id** (*basestring*, *list*, *set*, *tuple*) – workflowId query parameter. Device Workflow Id .
- **project_name** (*basestring*, *list*, *set*, *tuple*) – projectName query parameter. Device Project Name .
- **workflow_name** (*basestring*, *list*, *set*, *tuple*) – workflowName query parameter. Device Workflow Name .
- **smart_account_id** (*basestring*, *list*, *set*, *tuple*) – smartAccountId query parameter. Device Smart Account .
- **virtual_account_id** (*basestring*, *list*, *set*, *tuple*) – virtualAccountId query parameter. Device Virtual Account .
- **last_contact** (*bool*) – lastContact query parameter. Device Has Contacted lastContact > 0 .
- **mac_address** (*basestring*) – macAddress query parameter. Device Mac Address .
- **hostname** (*basestring*) – hostname query parameter. Device Hostname .
- **site_name** (*basestring*) – siteName query parameter. Device Site Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/get-device-list>

```
claim_device(configFileUrl=None, configId=None, deviceClaimList=None, fileServiceId=None,  
             imageId=None, imageUrl=None, populateInventory=None, projectId=None,  
             workflowId=None, headers=None, payload=None, active_validation=True,  
             **request_parameters)
```

Claims one of more devices with specified workflow .

Parameters

- **configFileUrl** (*string*) – Device Onboarding (PnP)’s configFileUrl.
- **configId** (*string*) – Device Onboarding (PnP)’s configId.
- **deviceClaimList** (*list*) – Device Onboarding (PnP)’s deviceClaimList (list of objects).
- **fileServiceId** (*string*) – Device Onboarding (PnP)’s fileServiceId.
- **imageId** (*string*) – Device Onboarding (PnP)’s imageId.
- **imageUrl** (*string*) – Device Onboarding (PnP)’s imageUrl.
- **populateInventory** (*boolean*) – Device Onboarding (PnP)’s populateInventory.
- **projectId** (*string*) – Device Onboarding (PnP)’s projectId.
- **workflowId** (*string*) – Device Onboarding (PnP)’s workflowId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!claim-device>

```
get_device_count(cm_state=None, last_contact=None, name=None, onb_state=None, pid=None,  
                 project_id=None, project_name=None, serial_number=None, smart_account_id=None,  
                 source=None, state=None, virtual_account_id=None, workflow_id=None,  
                 workflow_name=None, headers=None, **request_parameters)
```

Returns the device count based on filter criteria. This is useful for pagination .

Parameters

- **serial_number** (*basestring, list, set, tuple*) – serialNumber query parameter. Device Serial Number .
- **state** (*basestring, list, set, tuple*) – state query parameter. Device State .

- **onb_state** (*basestring*, *list*, *set*, *tuple*) – onbState query parameter. Device Onboarding State .
- **cm_state** (*basestring*, *list*, *set*, *tuple*) – cmState query parameter. Device Connection Manager State .
- **name** (*basestring*, *list*, *set*, *tuple*) – name query parameter. Device Name .
- **pid** (*basestring*, *list*, *set*, *tuple*) – pid query parameter. Device ProductId .
- **source** (*basestring*, *list*, *set*, *tuple*) – source query parameter. Device Source .
- **project_id** (*basestring*, *list*, *set*, *tuple*) – projectId query parameter. Device Project Id .
- **workflow_id** (*basestring*, *list*, *set*, *tuple*) – workflowId query parameter. Device Workflow Id .
- **project_name** (*basestring*, *list*, *set*, *tuple*) – projectName query parameter. Device Project Name .
- **workflow_name** (*basestring*, *list*, *set*, *tuple*) – workflowName query parameter. Device Workflow Name .
- **smart_account_id** (*basestring*, *list*, *set*, *tuple*) – smartAccountId query parameter. Device Smart Account .
- **virtual_account_id** (*basestring*, *list*, *set*, *tuple*) – virtualAccountId query parameter. Device Virtual Account .
- **last_contact** (*bool*) – lastContact query parameter. Device Has Contacted lastContact > 0 .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/get-device-count>

get_device_history(*serial_number*, *sort=None*, *sort_order=None*, *headers=None*, ****request_parameters**)

Returns history for a specific device. Serial number is a required parameter .

Parameters

- **serial_number** (*basestring*) – serialNumber query parameter. Device Serial Number .

- **sort** (*basestring*, *list*, *set*, *tuple*) – sort query parameter. Comma separated list of fields to sort on .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-history>

import_devices_in_bulk(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add devices to PnP in bulk .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!import-devices-in-bulk>

reset_device(*deviceResetList=None, projectId=None, workflowId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Recovers a device from a Workflow Execution Error state .

Parameters

- **deviceResetList** (*list*) – Device Onboarding (PnP)’s deviceResetList (list of objects).
- **projectId** (*string*) – Device Onboarding (PnP)’s projectId.
- **workflowId** (*string*) – Device Onboarding (PnP)’s workflowId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!reset-device>

get_sync_result_for_virtual_account(*domain, name, headers=None, **request_parameters*)

Returns the summary of devices synced from the given smart account & virtual account with PnP .

Parameters

- **domain** (*basestring*) – domain path parameter. Smart Account Domain .
- **name** (*basestring*) – name path parameter. Virtual Account Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-sync-result-for-virtual-account>

```
claim_a_device_to_a_site(configInfo=None, deviceId=None, gateway=None, imageInfo=None,  
                           ipInterfaceName=None, rfProfile=None, sensorProfile=None, siteId=None,  
                           staticIP=None, subnetMask=None, type=None, vlanId=None, headers=None,  
                           payload=None, active_validation=True, **request_parameters)
```

Claim a device based on DNA-C Site-based design process. Some required parameters differ based on device platform: Default/StackSwitch: imageInfo, configInfo. AccessPoints: rfProfile. Sensors: sensorProfile. CatalystWLC/MobilityExpress/EWC: staticIP, subnetMask, gateway. vlanId and ipInterfaceName are also allowed for Catalyst 9800 WLCs. .

Parameters

- **configInfo** (*list*) – Device Onboarding (PnP)’s configInfo (list of objects).
- **deviceId** (*string*) – Device Onboarding (PnP)’s Device Id.
- **gateway** (*string*) – Device Onboarding (PnP)’s for CatalystWLC/MobilityExpress .
- **imageInfo** (*object*) – Device Onboarding (PnP)’s imageInfo.
- **ipInterfaceName** (*string*) – Device Onboarding (PnP)’s for Catalyst 9800 WLC .
- **rfProfile** (*string*) – Device Onboarding (PnP)’s for Access Points .
- **sensorProfile** (*string*) – Device Onboarding (PnP)’s for Sensors .
- **siteId** (*string*) – Device Onboarding (PnP)’s Site Id.
- **staticIP** (*string*) – Device Onboarding (PnP)’s for CatalystWLC/MobilityExpress .
- **subnetMask** (*string*) – Device Onboarding (PnP)’s for CatalystWLC/MobilityExpress .
- **type** (*string*) – Device Onboarding (PnP)’s Type. Available values are ‘Default’, ‘Stack-Switch’, ‘AccessPoint’, ‘Sensor’, ‘CatalystWLC’ and ‘MobilityExpress’.
- **vlanId** (*string*) – Device Onboarding (PnP)’s for Catalyst 9800 WLC .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!claim-a-device-to-a-site>

preview_config(*deviceId=None, siteId=None, type=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Triggers a preview for site-based Day 0 Configuration .

Parameters

- **deviceId** (*string*) – Device Onboarding (PnP)’s deviceId.
- **siteId** (*string*) – Device Onboarding (PnP)’s siteId.
- **type** (*string*) – Device Onboarding (PnP)’s type. Available values are ‘Default’, ‘AccessPoint’, ‘StackSwitch’, ‘Sensor’ and ‘MobilityExpress’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!preview-config>

un_claim_device(*deviceIdList=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Un-Claims one of more devices with specified workflow .

Parameters

- **deviceIdList** (*list*) – Device Onboarding (PnP)’s deviceIdList (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!un-claim-device>

```
sync_virtual_account_devices(autoSyncPeriod=None, ccoUser=None, expiry=None, lastSync=None,
                               profile=None, smartAccountId=None, syncResult=None,
                               syncResultStr=None, syncStartTime=None, syncStatus=None,
                               tenantId=None, token=None, virtualAccountId=None, headers=None,
                               payload=None, active_validation=True, **request_parameters)
```

Synchronizes the device info from the given smart account & virtual account with the PnP database. The response payload returns a list of synced devices .

Parameters

- **autoSyncPeriod** (*integer*) – Device Onboarding (PnP)’s autoSyncPeriod.
- **ccoUser** (*string*) – Device Onboarding (PnP)’s ccoUser.
- **expiry** (*integer*) – Device Onboarding (PnP)’s expiry.
- **lastSync** (*integer*) – Device Onboarding (PnP)’s lastSync.
- **profile** (*object*) – Device Onboarding (PnP)’s profile.
- **smartAccountId** (*string*) – Device Onboarding (PnP)’s smartAccountId.
- **syncResult** (*object*) – Device Onboarding (PnP)’s syncResult.
- **syncResultStr** (*string*) – Device Onboarding (PnP)’s syncResultStr.
- **syncStartTime** (*integer*) – Device Onboarding (PnP)’s syncStartTime.
- **syncStatus** (*string*) – Device Onboarding (PnP)’s syncStatus. Available values are ‘NOT_SYNCED’, ‘SYNCING’, ‘SUCCESS’ and ‘FAILURE’.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **token** (*string*) – Device Onboarding (PnP)’s token.
- **virtualAccountId** (*string*) – Device Onboarding (PnP)’s virtualAccountId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict*

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!sync-virtual-account-devices>

```
update_device(id, _id=None, deviceInfo=None, runSummaryList=None, systemResetWorkflow=None,
               systemWorkflow=None, tenantId=None, version=None, workflow=None,
               workflowParameters=None, headers=None, payload=None, active_validation=True,
               **request_parameters)
```

Updates device details specified by device id in PnP database .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)’s _id.
- **deviceInfo** (*object*) – Device Onboarding (PnP)’s deviceInfo.
- **runSummaryList** (*list*) – Device Onboarding (PnP)’s runSummaryList (list of objects).
- **systemResetWorkflow** (*object*) – Device Onboarding (PnP)’s systemResetWorkflow.
- **systemWorkflow** (*object*) – Device Onboarding (PnP)’s systemWorkflow.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **version** (*integer*) – Device Onboarding (PnP)’s version.
- **workflow** (*object*) – Device Onboarding (PnP)’s workflow.
- **workflowParameters** (*object*) – Device Onboarding (PnP)’s workflowParameters.
- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-device>

delete_device_by_id_from_pnp(*id*, *headers=None*, ***request_parameters*)

Deletes specified device from PnP database .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/delete-device-by-id-from-pnp>

get_device_by_id(*id*, *headers=None*, ***request_parameters*)

Returns device details specified by device id .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/get-device-by-id>

```
update_pnp_global_settings(_id=None, aaaCredentials=None, acceptEula=None, defaultProfile=None,
                           savaMappingList=None, taskTimeOuts=None, tenantId=None,
                           version=None, headers=None, payload=None, active_validation=True,
                           **request_parameters)
```

Updates the user's list of global PnP settings .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)'s _id.
- **aaaCredentials** (*object*) – Device Onboarding (PnP)'s aaaCredentials.
- **acceptEula** (*boolean*) – Device Onboarding (PnP)'s acceptEula.
- **defaultProfile** (*object*) – Device Onboarding (PnP)'s defaultProfile.
- **savaMappingList** (*list*) – Device Onboarding (PnP)'s savaMappingList (list of objects).
- **taskTimeOuts** (*object*) – Device Onboarding (PnP)'s taskTimeOuts.
- **tenantId** (*string*) – Device Onboarding (PnP)'s tenantId.
- **version** (*integer*) – Device Onboarding (PnP)'s version.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-pnp-global-settings>

```
get_pnp_global_settings(headers=None, **request_parameters)
```

Returns global PnP settings of the user .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-pnp-global-settings>**get_smart_account_list**(*headers=None, **request_parameters*)

Returns the list of Smart Account domains .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type*list***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-smart-account-list>**get_virtual_account_list**(*domain, headers=None, **request_parameters*)

Returns list of virtual accounts associated with the specified smart account .

Parameters

- **domain** (*basestring*) – domain path parameter. Smart Account Domain .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type*list***Raises**

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-virtual-account-list>

```
add_virtual_account(autoSyncPeriod=None, ccoUser=None, expiry=None, lastSync=None,
                    profile=None, smartAccountId=None, syncResult=None, syncResultStr=None,
                    syncStartTime=None, syncStatus=None, tenantId=None, token=None,
                    virtualAccountId=None, headers=None, payload=None, active_validation=True,
                    **request_parameters)
```

Registers a Smart Account, Virtual Account and the relevant server profile info with the PnP System & database. The devices present in the registered virtual account are synced with the PnP database as well. The response payload returns the new profile .

Parameters

- **autoSyncPeriod** (*integer*) – Device Onboarding (PnP)’s autoSyncPeriod.
- **ccoUser** (*string*) – Device Onboarding (PnP)’s ccoUser.
- **expiry** (*integer*) – Device Onboarding (PnP)’s expiry.
- **lastSync** (*integer*) – Device Onboarding (PnP)’s lastSync.
- **profile** (*object*) – Device Onboarding (PnP)’s profile.
- **smartAccountId** (*string*) – Device Onboarding (PnP)’s smartAccountId.
- **syncResult** (*object*) – Device Onboarding (PnP)’s syncResult.
- **syncResultStr** (*string*) – Device Onboarding (PnP)’s syncResultStr.
- **syncStartTime** (*integer*) – Device Onboarding (PnP)’s syncStartTime.
- **syncStatus** (*string*) – Device Onboarding (PnP)’s syncStatus. Available values are ‘NOT_SYNCED’, ‘SYNCING’, ‘SUCCESS’ and ‘FAILURE’.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **token** (*string*) – Device Onboarding (PnP)’s token.
- **virtualAccountId** (*string*) – Device Onboarding (PnP)’s virtualAccountId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-virtual-account>

```
update_pnp_server_profile(autoSyncPeriod=None, ccoUser=None, expiry=None, lastSync=None,  
                           profile=None, smartAccountId=None, syncResult=None,  
                           syncResultStr=None, syncStartTime=None, syncStatus=None,  
                           tenantId=None, token=None, virtualAccountId=None, headers=None,  
                           payload=None, active_validation=True, **request_parameters)
```

Updates the PnP Server profile in a registered Virtual Account in the PnP database. The response payload returns the updated smart & virtual account info .

Parameters

- **autoSyncPeriod** (*integer*) – Device Onboarding (PnP)’s autoSyncPeriod.
- **ccoUser** (*string*) – Device Onboarding (PnP)’s ccoUser.
- **expiry** (*integer*) – Device Onboarding (PnP)’s expiry.
- **lastSync** (*integer*) – Device Onboarding (PnP)’s lastSync.
- **profile** (*object*) – Device Onboarding (PnP)’s profile.
- **smartAccountId** (*string*) – Device Onboarding (PnP)’s smartAccountId.
- **syncResult** (*object*) – Device Onboarding (PnP)’s syncResult.
- **syncResultStr** (*string*) – Device Onboarding (PnP)’s syncResultStr.
- **syncStartTime** (*integer*) – Device Onboarding (PnP)’s syncStartTime.
- **syncStatus** (*string*) – Device Onboarding (PnP)’s syncStatus. Available values are ‘NOT_SYNCED’, ‘SYNCING’, ‘SUCCESS’ and ‘FAILURE’.
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **token** (*string*) – Device Onboarding (PnP)’s token.
- **virtualAccountId** (*string*) – Device Onboarding (PnP)’s virtualAccountId.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-pnp-server-profile>

deregister_virtual_account(*domain, name, headers=None, **request_parameters*)

Deregisters the specified smart account & virtual account info and the associated device information from the PnP System & database. The devices associated with the deregistered virtual account are removed from the PnP database as well. The response payload contains the deregistered smart & virtual account information .

Parameters

- **domain** (*basestring*) – domain query parameter. Smart Account Domain .
- **name** (*basestring*) – name query parameter. Virtual Account Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!deregister-virtual-account>

get_workflows(*limit=None, name=None, offset=None, sort=None, sort_order=None, type=None, headers=None, **request_parameters*)

Returns the list of workflows based on filter criteria. If a limit is not specified, it will default to return 50 workflows. Pagination and sorting are also supported by this endpoint .

Parameters

- **limit** (*int*) – limit query parameter. Limits number of results .
- **offset** (*int*) – offset query parameter. Index of first result .
- **sort** (*basestring, list, set, tuple*) – sort query parameter. Comma seperated list of fields to sort on .
- **sort_order** (*basestring*) – sortOrder query parameter. Sort Order Ascending (asc) or Descending (des) .
- **type** (*basestring, list, set, tuple*) – type query parameter. Workflow Type .
- **name** (*basestring, list, set, tuple*) – name query parameter. Workflow Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

`list`

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-workflows>

```
add_a_workflow(_id=None, addToInventory=None, addedOn=None, configId=None, currTaskIdx=None,
description=None, endTime=None, execTime=None, imageId=None, instanceType=None,
lastupdateOn=None, name=None, startTime=None, state=None, tasks=None,
tenantId=None, type=None, useState=None, version=None, headers=None,
payload=None, active_validation=True, **request_parameters)
```

Adds a PnP Workflow along with the relevant tasks in the workflow into the PnP database .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)'s _id.
- **addToInventory** (*boolean*) – Device Onboarding (PnP)'s addToInventory.
- **addedOn** (*integer*) – Device Onboarding (PnP)'s addedOn.
- **configId** (*string*) – Device Onboarding (PnP)'s configId.
- **currTaskIdx** (*integer*) – Device Onboarding (PnP)'s currTaskIdx.
- **description** (*string*) – Device Onboarding (PnP)'s description.
- **endTime** (*integer*) – Device Onboarding (PnP)'s endTime.
- **execTime** (*integer*) – Device Onboarding (PnP)'s execTime.
- **imageId** (*string*) – Device Onboarding (PnP)'s imageId.
- **instanceType** (*string*) – Device Onboarding (PnP)'s instanceType. Available values are 'SystemWorkflow', 'UserWorkflow' and 'SystemResetWorkflow'.
- **lastupdateOn** (*integer*) – Device Onboarding (PnP)'s lastupdateOn.
- **name** (*string*) – Device Onboarding (PnP)'s name.
- **startTime** (*integer*) – Device Onboarding (PnP)'s startTime.
- **state** (*string*) – Device Onboarding (PnP)'s state.
- **tasks** (*list*) – Device Onboarding (PnP)'s tasks (list of objects).
- **tenantId** (*string*) – Device Onboarding (PnP)'s tenantId.
- **type** (*string*) – Device Onboarding (PnP)'s type.
- **useState** (*string*) – Device Onboarding (PnP)'s useState.
- **version** (*integer*) – Device Onboarding (PnP)'s version.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-a-workflow>

get_workflow_count(*name=None, headers=None, **request_parameters*)

Returns the workflow count .

Parameters

- **name** (*basestring, list, set, tuple*) – name query parameter. Workflow Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-workflow-count>

get_workflow_by_id(*id, headers=None, **request_parameters*)

Returns a workflow specified by id .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-workflow-by-id>

delete_workflow_by_id(*id*, *headers=None*, ***request_parameters*)

Deletes a workflow specified by id .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-workflow-by-id>

update_workflow(*id*, *_id=None*, *addToInventory=None*, *addedOn=None*, *configId=None*, *currTaskIdx=None*, *description=None*, *endTime=None*, *execTime=None*, *imageId=None*, *instanceType=None*, *lastupdateOn=None*, *name=None*, *startTime=None*, *state=None*, *tasks=None*, *tenantId=None*, *type=None*, *useState=None*, *version=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Updates an existing workflow .

Parameters

- **_id** (*string*) – Device Onboarding (PnP)'s _id.
- **addToInventory** (*boolean*) – Device Onboarding (PnP)'s addToInventory.

- **addedOn** (*integer*) – Device Onboarding (PnP)’s addedOn.
- **configId** (*string*) – Device Onboarding (PnP)’s configId.
- **currTaskIdx** (*integer*) – Device Onboarding (PnP)’s currTaskIdx.
- **description** (*string*) – Device Onboarding (PnP)’s description.
- **endTime** (*integer*) – Device Onboarding (PnP)’s endTime.
- **execTime** (*integer*) – Device Onboarding (PnP)’s execTime.
- **imageId** (*string*) – Device Onboarding (PnP)’s imageId.
- **instanceType** (*string*) – Device Onboarding (PnP)’s instanceType. Available values are ‘SystemWorkflow’, ‘UserWorkflow’ and ‘SystemResetWorkflow’.
- **lastupdateOn** (*integer*) – Device Onboarding (PnP)’s lastupdateOn.
- **name** (*string*) – Device Onboarding (PnP)’s name.
- **startTime** (*integer*) – Device Onboarding (PnP)’s startTime.
- **state** (*string*) – Device Onboarding (PnP)’s state.
- **tasks** (*list*) – Device Onboarding (PnP)’s tasks (list of objects).
- **tenantId** (*string*) – Device Onboarding (PnP)’s tenantId.
- **type** (*string*) – Device Onboarding (PnP)’s type.
- **useState** (*string*) – Device Onboarding (PnP)’s useState.
- **version** (*integer*) – Device Onboarding (PnP)’s version.
- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/update-workflow>

device_replacement

class DeviceReplacement

Cisco DNA Center Device Replacement API (version: 2.3.5.3).

Wraps the DNA Center Device Replacement API and exposes the API as native Python methods that return native Python objects.

```
return_replacement_devices_with_details(family=None, faulty_device_name=None,  
                                          faulty_device_platform=None,  
                                          faulty_device_serial_number=None, limit=None,  
                                          offset=None, replacement_device_platform=None,  
                                          replacement_device_serial_number=None,  
                                          replacement_status=None, sort_by=None,  
                                          sort_order=None, headers=None, **request_parameters)
```

Get list of replacement devices with replacement details and it can filter replacement devices based on Faulty Device Name, Faulty Device Platform, Replacement Device Platform, Faulty Device Serial Number, Replacement Device Serial Number, Device Replacement status, Product Family. .

Parameters

- **faulty_device_name** (*basestring*) – faultyDeviceName query parameter. Faulty Device Name .
- **faulty_device_platform** (*basestring*) – faultyDevicePlatform query parameter. Faulty Device Platform .
- **replacement_device_platform** (*basestring*) – replacementDevicePlatform query parameter. Replacement Device Platform .
- **faulty_device_serial_number** (*basestring*) – faultyDeviceSerialNumber query parameter. Faulty Device Serial Number .
- **replacement_device_serial_number** (*basestring*) – replacementDeviceSerialNumber query parameter. Replacement Device Serial Number .
- **replacement_status** (*basestring*, *list*, *set*, *tuple*) – replacementStatus query parameter. Device Replacement status [READY-FOR-REPLACEMENT, REPLACEMENT-IN-PROGRESS, REPLACEMENT-SCHEDULED, REPLACED, ERROR, NETWORK_READINESS_REQUESTED, NETWORK_READINESS_FAILED] .
- **family** (*basestring*, *list*, *set*, *tuple*) – family query parameter. List of families [Routers, Switches and Hubs, AP] .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy this field. SortBy is mandatory when order is used. .
- **sort_order** (*basestring*) – sortOrder query parameter. Order on displayName [ASC, DESC] .
- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!return-replacement-devices-with-details>

```
unmark_device_for_replacement(headers=None, payload=None, active_validation=True,  
                               **request_parameters)
```

UnMarks device for replacement .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!unmark-device-for-replacement>

```
mark_device_for_replacement(headers=None, payload=None, active_validation=True,  
                             **request_parameters)
```

Marks device for replacement .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!mark-device-for-replacement>

return_replacement_devices_count(*replacement_status=None, headers=None, **request_parameters*)

Get replacement devices count .

Parameters

- **replacement_status** (*basestring, list, set, tuple*) – replacementStatus query parameter. Device Replacement status list[READY-FOR-REPLACEMENT, REPLACEMENT-IN-PROGRESS, REPLACEMENT-SCHEDULED, REPLACED, ERROR] .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!return-replacement-devices-count>

deploy_device_replacement_workflow(*faultyDeviceSerialNumber=None, replacementDeviceSerialNumber=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to trigger RMA workflow that will replace faulty device with replacement device with same configuration and images .

Parameters

- **faultyDeviceSerialNumber** (*string*) – Device Replacement’s faultyDeviceSerial-Number.
- **replacementDeviceSerialNumber** (*string*) – Device Replacement’s replacementDeviceSerialNumber.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!deploy-device-replacement-workflow>

devices**class Devices**

Cisco DNA Center Devices API (version: 2.3.5.3).

Wraps the DNA Center Devices API and exposes the API as native Python methods that return native Python objects.

get_planned_access_points_for_building(*building_id*, *limit=None*, *offset=None*, *radios=None*, *headers=None*, ***request_parameters*)

Provides a list of Planned Access Points for the Building it is requested for .

Parameters

- **building_id** (*basestring*) – buildingId path parameter. Building Id .
- **limit** (*int*) – limit query parameter.
- **offset** (*int*) – offset query parameter.
- **radios** (*bool*) – radios query parameter. include planned radio details .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-planned-access-points-for-building>**get_device_detail**(*identifier, search_by, timestamp=None, headers=None, **request_parameters*)

Returns detailed Network Device information retrieved by Mac Address, Device Name or UUID for any given point of time. .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the device data is required .
- **search_by** (*basestring*) – searchBy query parameter. MAC Address or Device Name value or UUID of the network device .
- **identifier** (*basestring*) – identifier query parameter. One of keywords : macAddress or uuid or nwDeviceName .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-device-detail>**get_device_enrichment_details**(*headers=None, **request_parameters*)

Enriches a given network device context (device id or device Mac Address or device management IP address) with details about the device and neighbor topology .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

`list`

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-enrichment-details>

devices(*device_role=None, end_time=None, health=None, limit=None, offset=None, site_id=None, start_time=None, headers=None, **request_parameters*)

Intent API for accessing DNA Assurance Device object for generating reports, creating dashboards or creating additional value added services. .

Parameters

- **device_role** (*basestring*) – deviceRole query parameter. The device role (One of CORE, ACCESS, DISTRIBUTION, ROUTER, WLC, AP) .
- **site_id** (*basestring*) – siteId query parameter. Assurance site UUID value .
- **health** (*basestring*) – health query parameter. The device overall health (One of POOR, FAIR, GOOD) .
- **start_time** (*int*) – startTime query parameter. UTC epoch time in milliseconds .
- **end_time** (*int*) – endTime query parameter. UTC epoch time in milliseconds .
- **limit** (*int*) – limit query parameter. Max number of device entries in the response (default to 50. Max at 1000) .
- **offset** (*int*) – offset query parameter. The offset of the first device in the returned data .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

`MyDict`

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!devices>

get_planned_access_points_for_floor(*floor_id*, *limit=None*, *offset=None*, *radios=None*, *headers=None*, ***request_parameters*)

Provides a list of Planned Access Points for the Floor it is requested for .

Parameters

- **floor_id** (*basestring*) – floorId path parameter. Floor Id .
- **limit** (*int*) – limit query parameter.
- **offset** (*int*) – offset query parameter.
- **radios** (*bool*) – radios query parameter. include planned radio details .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-planned-access-points-for-floor>

get_all_interfaces(*last_input_time=None*, *last_output_time=None*, *limit=None*, *offset=None*, *headers=None*, ***request_parameters*)

Returns all available interfaces. This endpoint can return a maximum of 500 interfaces .

Parameters

- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **last_input_time** (*basestring*) – lastInputTime query parameter. Last Input Time .
- **last_output_time** (*basestring*) – lastOutputTime query parameter. Last Output Time .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-all-interfaces>

get_device_interface_count(*headers=None, **request_parameters*)

Returns the count of interfaces for all devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-interface-count>

get_interface_by_ip(*ip_address, headers=None, **request_parameters*)

Returns list of interfaces for specified device management IP address .

Parameters

- **ip_address** (*basestring*) – ipAddress path parameter. IP address of the interface .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-interface-by-ip>

get_isis_interfaces(*headers=None, **request_parameters*)

Returns the interfaces that has ISIS enabled .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-isis-interfaces>

get_interface_info_by_id(*device_id, headers=None, **request_parameters*)

Returns list of interfaces by specified device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-interface-info-by-id>

get_device_interface_count_by_id(*device_id*, *headers=None*, ***request_parameters*)

Returns the interface count for the given device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-interface-count-by-id>

get_interface_details(*device_id*, *name*, *headers=None*, ***request_parameters*)

Returns interface by specified device Id and interface name .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **name** (*basestring*) – name query parameter. Interface name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-interface-details>

get_device_interfaces_by_specified_range(*device_id*, *records_to_return*, *start_index*,
headers=None, ***request_parameters*)

Returns the list of interfaces for the device for the specified range .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-interfaces-by-specified-range>

get_ospf_interfaces(*headers=None*, ***request_parameters*)

Returns the interfaces that has OSPF enabled .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-ospf-interfaces>

get_interface_by_id(*id*, *headers=None*, ***request_parameters*)

Returns the interface for the given interface ID .

Parameters

- **id** (*basestring*) – id path parameter. Interface ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-interface-by-id>

update_interface_details(*interface_uuid*, *adminStatus=None*, *deployment_mode=None*, *description=None*, *vlanId=None*, *voiceVlanId=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add/Update Interface description, VLAN membership, Voice VLAN and change Interface admin status ('UP'/'DOWN') from Request body. .

Parameters

- **adminStatus** (*string*) – Devices's Admin Status.
- **description** (*string*) – Devices's Description.
- **vlanId** (*integer*) – Devices's Vlan Id.
- **voiceVlanId** (*integer*) – Devices's Voice Vlan Id.
- **interface_uuid** (*basestring*) – interfaceUuid path parameter. Interface ID .
- **deployment_mode** (*basestring*) – deploymentMode query parameter. Preview/Deploy ['Preview' means the configuration is not pushed to the device. 'Deploy' makes the configuration pushed to the device] .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!update-interface-details>**legit_operations_for_interface**(*interface_uuid*, *headers=None*, ***request_parameters*)

Get list of all properties & operations valid for an interface. .

Parameters

- **interface_uuid** (*basestring*) – interfaceUuid path parameter. Interface ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!legit-operations-for-interface>**clear_mac_address_table**(*interface_uuid*, *deployment_mode=None*, *operation=None*, *payload=None*, *headers=None*, *active_validation=True*, ***request_parameters*)

Clear mac-address on an individual port. In request body, operation needs to be specified as 'ClearMacAddress'. In the future more possible operations will be added to this API .

Parameters

- **operation** (*string*) – Devices's Operation.
- **payload** (*dict*) – Devices's Payload.
- **interface_uuid** (*basestring*) – interfaceUuid path parameter. Interface Id .
- **deployment_mode** (*basestring*) – deploymentMode query parameter. Preview/Deploy ['Preview' means the configuration is not pushed to the device. 'Deploy' makes the configuration pushed to the device] .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** – A JSON serializable Python object to send in the body of the Request.

- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!clear-mac-address-table>

```
get_device_list(associated_wlc_ip=None, collection_interval=None, collection_status=None,
                device_support_level=None, error_code=None, error_description=None, family=None,
                hostname=None, id=None, license_name=None, license_status=None,
                license_type=None, limit=None, location=None, location_name=None,
                mac_address=None, management_ip_address=None, module_equipmenttype=None,
                module_name=None, module_operationstatecode=None, module_partnumber=None,
                module_servicestate=None, module_vendorequipmenttype=None,
                not_synced_for_minutes=None, offset=None, platform_id=None,
                reachability_status=None, role=None, serial_number=None, series=None,
                software_type=None, software_version=None, type=None, up_time=None,
                headers=None, **request_parameters)
```

Returns list of network devices based on filter criteria such as management IP address, mac address, hostname, etc. You can use the `*` in any value to conduct a wildcard search. For example, to find all hostnames beginning with myhost in the IP address range 192.25.18.n, issue the following request: GET /dna/intent/api/v1/network-device?hostname=myhost.*&managementIpAddress=192.25.18.* If id parameter is provided with comma separated ids, it will return the list of network-devices for the given ids and ignores the other request parameters. You can also specify offset & limit to get the required list. .

Parameters

- **hostname** (*basestring*, *list*, *set*, *tuple*) – hostname query parameter.
- **management_ip_address** (*basestring*, *list*, *set*, *tuple*) – managementIpAddress query parameter.
- **mac_address** (*basestring*, *list*, *set*, *tuple*) – macAddress query parameter.
- **location_name** (*basestring*, *list*, *set*, *tuple*) – locationName query parameter.
- **serial_number** (*basestring*, *list*, *set*, *tuple*) – serialNumber query parameter.
- **location** (*basestring*, *list*, *set*, *tuple*) – location query parameter.
- **family** (*basestring*, *list*, *set*, *tuple*) – family query parameter.
- **type** (*basestring*, *list*, *set*, *tuple*) – type query parameter.
- **series** (*basestring*, *list*, *set*, *tuple*) – series query parameter.

- **collection_status** (*basestring*, *list*, *set*, *tuple*) – collectionStatus query parameter.
- **collection_interval** (*basestring*, *list*, *set*, *tuple*) – collectionInterval query parameter.
- **not_synced_for_minutes** (*basestring*, *list*, *set*, *tuple*) – notSyncedForMinutes query parameter.
- **error_code** (*basestring*, *list*, *set*, *tuple*) – errorCode query parameter.
- **error_description** (*basestring*, *list*, *set*, *tuple*) – errorDescription query parameter.
- **software_version** (*basestring*, *list*, *set*, *tuple*) – softwareVersion query parameter.
- **software_type** (*basestring*, *list*, *set*, *tuple*) – softwareType query parameter.
- **platform_id** (*basestring*, *list*, *set*, *tuple*) – platformId query parameter.
- **role** (*basestring*, *list*, *set*, *tuple*) – role query parameter.
- **reachability_status** (*basestring*, *list*, *set*, *tuple*) – reachabilityStatus query parameter.
- **up_time** (*basestring*, *list*, *set*, *tuple*) – upTime query parameter.
- **associated_wlc_ip** (*basestring*, *list*, *set*, *tuple*) – associatedWlcIp query parameter.
- **license_name** (*basestring*, *list*, *set*, *tuple*) – license.name query parameter.
- **license_type** (*basestring*, *list*, *set*, *tuple*) – license.type query parameter.
- **license_status** (*basestring*, *list*, *set*, *tuple*) – license.status query parameter.
- **module_name** (*basestring*, *list*, *set*, *tuple*) – module+name query parameter.
- **module_equipmenttype** (*basestring*, *list*, *set*, *tuple*) – module+equipmenttype query parameter.
- **module_servicestate** (*basestring*, *list*, *set*, *tuple*) – module+servicestate query parameter.
- **module_vendorequipmenttype** (*basestring*, *list*, *set*, *tuple*) – module+vendorequipmenttype query parameter.
- **module_partnumber** (*basestring*, *list*, *set*, *tuple*) – module+partnumber query parameter.
- **module_operationstatecode** (*basestring*, *list*, *set*, *tuple*) – module+operationstatecode query parameter.
- **id** (*basestring*) – id query parameter. Accepts comma separated ids and return list of network-devices for the given ids. If invalid or not-found ids are provided, null entry will be returned in the list. .
- **device_support_level** (*basestring*) – deviceSupportLevel query parameter.
- **offset** (*int*) – offset query parameter. offset >= 1 [X gives results from Xth device onwards] .
- **limit** (*int*) – limit query parameter. 1 <= limit <= 500 [max. no. of devices to be returned in the result] .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-list>

```
add_device(cliTransport=None, computeDevice=None, enablePassword=None,
           extendedDiscoveryInfo=None, httpPassword=None, httpPort=None, httpSecure=None,
           httpUserName=None, ipAddress=None, merakiOrgId=None, netconfPort=None,
           password=None, serialNumber=None, snmpAuthPassphrase=None, snmpAuthProtocol=None,
           snmpMode=None, snmpPrivPassphrase=None, snmpPrivProtocol=None,
           snmpROCommunity=None, snmpRWCommunity=None, snmpRetry=None, snmpTimeout=None,
           snmpUserName=None, snmpVersion=None, type=None, updateMgmtIPaddressList=None,
           userName=None, headers=None, payload=None, active_validation=True,
           **request_parameters)
```

Adds the device with given credential .

Parameters

- **cliTransport** (*string*) – Devices's cliTransport.
- **computeDevice** (*boolean*) – Devices's computeDevice.
- **enablePassword** (*string*) – Devices's enablePassword.
- **extendedDiscoveryInfo** (*string*) – Devices's extendedDiscoveryInfo.
- **httpPassword** (*string*) – Devices's httpPassword.
- **httpPort** (*string*) – Devices's httpPort.
- **httpSecure** (*boolean*) – Devices's httpSecure.
- **httpUserName** (*string*) – Devices's httpUserName.
- **ipAddress** (*list*) – Devices's ipAddress (list of strings).
- **merakiOrgId** (*list*) – Devices's merakiOrgId (list of strings).
- **netconfPort** (*string*) – Devices's netconfPort.
- **password** (*string*) – Devices's password.
- **serialNumber** (*string*) – Devices's serialNumber.
- **snmpAuthPassphrase** (*string*) – Devices's snmpAuthPassphrase.
- **snmpAuthProtocol** (*string*) – Devices's snmpAuthProtocol.

- **snmpMode** (*string*) – Devices’s snmpMode.
- **snmpPrivPassphrase** (*string*) – Devices’s snmpPrivPassphrase.
- **snmpPrivProtocol** (*string*) – Devices’s snmpPrivProtocol.
- **snmpROCommunity** (*string*) – Devices’s snmpROCommunity.
- **snmpRWCommunity** (*string*) – Devices’s snmpRWCommunity.
- **snmpRetry** (*integer*) – Devices’s snmpRetry.
- **snmpTimeout** (*integer*) – Devices’s snmpTimeout.
- **snmpUserName** (*string*) – Devices’s snmpUserName.
- **snmpVersion** (*string*) – Devices’s snmpVersion.
- **type** (*string*) – Devices’s type. Available values are ‘COMPUTE_DEVICE’, ‘MERAKI_DASHBOARD’, ‘NETWORK_DEVICE’ and ‘NODATACHANGE’.
- **updateMgmtIPAddressList** (*list*) – Devices’s updateMgmtIPAddressList (list of objects).
- **userName** (*string*) – Devices’s userName.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

               snmpRetry=None, snmpTimeout=None, snmpUserName=None, snmpVersion=None,
               type=None, updateMgmtIPAddressList=None, userName=None, headers=None,
               payload=None, active_validation=True, **request_parameters)
```

Sync the devices provided as input .

Parameters

- **cliTransport** (*string*) – Devices’s cliTransport.
- **computeDevice** (*boolean*) – Devices’s computeDevice.
- **enablePassword** (*string*) – Devices’s enablePassword.
- **extendedDiscoveryInfo** (*string*) – Devices’s extendedDiscoveryInfo.
- **httpPassword** (*string*) – Devices’s httpPassword.
- **httpPort** (*string*) – Devices’s httpPort.
- **httpSecure** (*boolean*) – Devices’s httpSecure.
- **httpUserName** (*string*) – Devices’s httpUserName.
- **ipAddress** (*list*) – Devices’s ipAddress (list of strings).
- **merakiOrgId** (*list*) – Devices’s merakiOrgId (list of strings).
- **netconfPort** (*string*) – Devices’s netconfPort.
- **password** (*string*) – Devices’s password.
- **serialNumber** (*string*) – Devices’s serialNumber.
- **snmpAuthPassphrase** (*string*) – Devices’s snmpAuthPassphrase.
- **snmpAuthProtocol** (*string*) – Devices’s snmpAuthProtocol.
- **snmpMode** (*string*) – Devices’s snmpMode.
- **snmpPrivPassphrase** (*string*) – Devices’s snmpPrivPassphrase.
- **snmpPrivProtocol** (*string*) – Devices’s snmpPrivProtocol.
- **snmpROCommunity** (*string*) – Devices’s snmpROCommunity.
- **snmpRWCommunity** (*string*) – Devices’s snmpRWCommunity.
- **snmpRetry** (*integer*) – Devices’s snmpRetry.
- **snmpTimeout** (*integer*) – Devices’s snmpTimeout.
- **snmpUserName** (*string*) – Devices’s snmpUserName.
- **snmpVersion** (*string*) – Devices’s snmpVersion.
- **type** (*string*) – Devices’s type. Available values are ‘COMPUTE_DEVICE’, ‘MERAKI_DASHBOARD’, ‘NETWORK_DEVICE’ and ‘NODATACHANGE’.
- **updateMgmtIPaddressList** (*list*) – Devices’s updateMgmtIPaddressList (list of objects).
- **userName** (*string*) – Devices’s userName.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

                                                             software_type=None,
                                                             software_version=None,
                                                             type=None, up_time=None,
                                                             vrf_name=None,
                                                             headers=None,
                                                             **request_parameters)
```

Returns the list of values of the first given required parameter. You can use the `.*` in any value to conduct a wildcard search. For example, to get all the devices with the management IP address starting with 10.10. , issue the following request: `GET /dna/inten/api/v1/network-device/autocomplete?managementIpAddress=10.10.*` It will return the device management IP addresses that match fully or partially the provided attribute. `{[10.10.1.1, 10.10.20.2, ...]}`. .

Parameters

- **vrf_name** (*basestring*) – vrfName query parameter.
- **management_ip_address** (*basestring*) – managementIpAddress query parameter.
- **hostname** (*basestring*) – hostname query parameter.
- **mac_address** (*basestring*) – macAddress query parameter.
- **family** (*basestring*) – family query parameter.
- **collection_status** (*basestring*) – collectionStatus query parameter.
- **collection_interval** (*basestring*) – collectionInterval query parameter.
- **software_version** (*basestring*) – softwareVersion query parameter.
- **software_type** (*basestring*) – softwareType query parameter.

- **reachability_status** (*basestring*) – reachabilityStatus query parameter.
- **reachability_failure_reason** (*basestring*) – reachabilityFailureReason query parameter.
- **error_code** (*basestring*) – errorCode query parameter.
- **platform_id** (*basestring*) – platformId query parameter.
- **series** (*basestring*) – series query parameter.
- **type** (*basestring*) – type query parameter.
- **serial_number** (*basestring*) – serialNumber query parameter.
- **up_time** (*basestring*) – upTime query parameter.
- **role** (*basestring*) – role query parameter.
- **role_source** (*basestring*) – roleSource query parameter.
- **associated_wlc_ip** (*basestring*) – associatedWlcIp query parameter.
- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

update_device_role(*id=None, role=None, roleSource=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates the role of the device as access, core, distribution, border router .

Parameters

- **id** (*string*) – Devices's id.
- **role** (*string*) – Devices's role.
- **roleSource** (*string*) – Devices's roleSource.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-device-role>

get_polling_interval_for_all_devices(*headers=None, **request_parameters*)

Returns polling interval of all devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-polling-interval-for-all-devices>

get_device_config_for_all_devices(*headers=None, **request_parameters*)

Returns the config for all devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-device-config-for-all-devices>**get_device_config_count**(*headers=None, **request_parameters*)

Returns the count of device configs .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-device-config-count>**get_device_count**(*headers=None, **request_parameters*)

Returns the count of network devices based on the filter criteria by management IP address, mac address, hostname and location name .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-count>

```
export_device_list(deviceUids=None, id=None, operationEnum=None, parameters=None,  
                    password=None, headers=None, payload=None, active_validation=True,  
                    **request_parameters)
```

Exports the selected network device to a file .

Parameters

- **deviceUids** (*list*) – Devices's deviceUids (list of strings).
- **id** (*string*) – Devices's id.
- **operationEnum** (*string*) – Devices's operationEnum. Available values are 'CREDENTIALDETAILS' and 'DEVICEDETAILS'.
- **parameters** (*list*) – Devices's parameters (list of strings).
- **password** (*string*) – Devices's password.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!export-device-list>

```
get_functional_capability_for_devices(device_id, function_name=None, headers=None,  
                                       **request_parameters)
```

Returns the functional-capability for given devices .

Parameters

- **device_id** (*basestring*) – deviceId query parameter. Accepts comma separated deviceId's and return list of functional-capabilities for the given id's. If invalid or not-found id's are provided, null entry will be returned in the list. .
- **function_name** (*basestring, list, set, tuple*) – functionName query parameter.

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-functional-capability-for-devices>

get_functional_capability_by_id(*id*, *headers=None*, ***request_parameters*)

Returns functional capability with given Id .

Parameters

- **id** (*basestring*) – id path parameter. Functional Capability UUID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-functional-capability-by-id>

inventory_insight_device_link_mismatch(*category*, *site_id*, *limit=None*, *offset=None*, *order=None*, *sort_by=None*, *headers=None*, ***request_parameters*)

Find all devices with link mismatch (speed / vlan) .

Parameters

- **site_id** (*basestring*) – siteId path parameter.
- **offset** (*int*) – offset query parameter. Row Number. Default value is 1 .
- **limit** (*int*) – limit query parameter. Default value is 500 .

- **category** (*basestring*) – category query parameter. Links mismatch category. Value can be speed-duplex or vlan. .
- **sort_by** (*basestring*) – sortBy query parameter. Sort By .
- **order** (*basestring*) – order query parameter. Order. Value can be asc or desc. Default value is asc .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!inventory-insight-device-link-mismatch>

get_devices_with_snmpv3_des(*site_id*, *limit=None*, *offset=None*, *order=None*, *sort_by=None*, *headers=None*, ***request_parameters*)

Returns devices added to Cisco DNA center with snmp v3 DES, where siteId is mandatory & accepts offset, limit, sortby, order which are optional. .

Parameters

- **site_id** (*basestring*) – siteId path parameter.
- **offset** (*int*) – offset query parameter. Row Number. Default value is 1 .
- **limit** (*int*) – limit query parameter. Default value is 500 .
- **sort_by** (*basestring*) – sortBy query parameter. Sort By .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-devices-with-snmpv3-des>

get_network_device_by_ip(*ip_address*, *headers=None*, ***request_parameters*)

Returns the network device by specified IP address .

Parameters

- **ip_address** (*basestring*) – ipAddress path parameter. Device IP address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-network-device-by-ip>

get_modules(*device_id*, *limit=None*, *name_list=None*, *offset=None*, *operational_state_code_list=None*, *part_number_list=None*, *vendor_equipment_type_list=None*, *headers=None*, ***request_parameters*)

Returns modules by specified device id .

Parameters

- **device_id** (*basestring*) – deviceId query parameter.
- **limit** (*int*) – limit query parameter.
- **offset** (*int*) – offset query parameter.
- **name_list** (*basestring*, *list*, *set*, *tuple*) – nameList query parameter.
- **vendor_equipment_type_list** (*basestring*, *list*, *set*, *tuple*) – vendorEquipmentTypeList query parameter.
- **part_number_list** (*basestring*, *list*, *set*, *tuple*) – partNumberList query parameter.
- **operational_state_code_list** (*basestring*, *list*, *set*, *tuple*) – operationalStateCodeList query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-modules>

```
get_module_count(device_id, name_list=None, operational_state_code_list=None,
                  part_number_list=None, vendor_equipment_type_list=None, headers=None,
                  **request_parameters)
```

Returns Module Count .

Parameters

- **device_id** (*basestring*) – deviceId query parameter.
- **name_list** (*basestring*, *list*, *set*, *tuple*) – nameList query parameter.
- **vendor_equipment_type_list** (*basestring*, *list*, *set*, *tuple*) – vendorEquipmentTypeList query parameter.
- **part_number_list** (*basestring*, *list*, *set*, *tuple*) – partNumberList query parameter.
- **operational_state_code_list** (*basestring*, *list*, *set*, *tuple*) – operationalStateCodeList query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-module-count>

get_module_info_by_id(*id*, *headers=None*, ***request_parameters*)

Returns Module info by 'module id' .

Parameters

- **id** (*basestring*) – id path parameter. Module id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-module-info-by-id>

get_device_by_serial_number(*serial_number*, *headers=None*, ***request_parameters*)

Returns the network device if the given serial number matches with any of the serial numbers collected. .

Parameters

- **serial_number** (*basestring*) – serialNumber path parameter. Device serial number .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-by-serial-number>

sync_devices_using_forcesync(*force_sync=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Synchronizes the devices. If forceSync param is false (default) then the sync would run in normal priority thread. If forceSync param is true then the sync would run in high priority thread if available, else the sync will fail. Result can be seen in the child task of each device .

Parameters

- **force_sync** (*bool*) – forceSync query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!sync-devices-using-forcesync>

get_devices_registered_for_wsa_notification(*macaddress=None, serial_number=None, headers=None, **request_parameters*)

It fetches devices which are registered to receive WSA notifications. The device serial number and/or MAC address are required to be provided as query parameters. .

Parameters

- **serial_number** (*basestring*) – serialNumber query parameter. Serial number of the device .
- **macaddress** (*basestring*) – macaddress query parameter. Mac addres of the device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-devices-registered-for-wsa-notification>

get_all_user_defined_fields(*id=None, name=None, headers=None, **request_parameters*)

Gets existing global User Defined Fields. If no input is given, it fetches ALL the Global UDFs. Filter/search is supported either by UDF Id(s) or by UDF name(s), but not both. .

Parameters

- **id** (*basestring*) – id query parameter. Comma-seperated id(s) used for search/filtering .
- **name** (*basestring*) – name query parameter. Comma-seperated name(s) used for search/filtering .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-all-user-defined-fields>

create_user_defined_field(*description=None, name=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Creates a new global User Defined Field, which can be assigned to devices .

Parameters

- **description** (*string*) – Devices's Description of UDF .
- **name** (*string*) – Devices's Name of UDF .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!create-user-defined-field>

```
update_user_defined_field(id, description=None, name=None, headers=None, payload=None,
                          active_validation=True, **request_parameters)
```

Updates an existing global User Defined Field, using it's id. .

Parameters

- **description** (*string*) – Devices's Description of UDF .
- **name** (*string*) – Devices's Name of UDF .
- **id** (*basestring*) – id path parameter. UDF id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!update-user-defined-field>

```
delete_user_defined_field(id, headers=None, **request_parameters)
```

Deletes an existing Global User-Defined-Field using it's id. .

Parameters

- **id** (*basestring*) – id path parameter. UDF id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-user-defined-field>

get_chassis_details_for_device(*device_id*, *headers=None*, ***request_parameters*)

Returns chassis details for given device ID .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-chassis-details-for-device>

get_stack_details_for_device(*device_id*, *headers=None*, ***request_parameters*)

Retrieves complete stack details for given device ID .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-stack-details-for-device>**remove_user_defined_field_from_device**(*device_id*, *name*, *headers=None*, ***request_parameters*)

Remove a User-Defined-Field from device. Name of UDF has to be passed as the query parameter. Please note that Global UDF will not be deleted by this operation. .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. UUID of device from which UDF has to be removed .
- **name** (*basestring*) – name query parameter. Name of UDF to be removed .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!remove-user-defined-field-from-device>**add_user_defined_field_to_device**(*device_id*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Assigns an existing Global User-Defined-Field to a device. If the UDF is already assigned to the specific device, then it updates the device UDF value accordingly. Please note that the assigning UDF 'name' must be an existing global UDF. Otherwise error shall be shown. .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. UUID of device to which UDF has to be added .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.

- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-user-defined-field-to-device>

return_power_supply_fan_details_for_the_given_device(*device_uuid*, *type=None*, *headers=None*, ***request_parameters*)

Return PowerSupply/ Fan details for the Given device .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter.
- **type** (*basestring*) – type query parameter. Type value can be PowerSupply, Fan, Chassis, Backplane, Module, PROCESSOR, Other, SFP. If no type is mentioned, All equipments are fetched for the device. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!return-power-supply-fan-details-for-the-given-device>

poe_interface_details(*device_uuid*, *interface_name_list=None*, *headers=None*, ***request_parameters*)

Returns POE interface details for the device, where deviceuuid is mandatory & accepts comma separated interface names which is optional and returns information for that particular interfaces where (operStatus = operationalStatus) .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. uuid of the device .
- **interface_name_list** (*basestring*) – interfaceNameList query parameter. comma separated interface names .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!poe-interface-details>

get_connected_device_detail(*device_uuid, interface_uuid, headers=None, **request_parameters*)

Get connected device detail for given deviceUuid and interfaceUuid .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. instanceuuid of Device .
- **interface_uuid** (*basestring*) – interfaceUuid path parameter. instanceuuid of interface .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-connected-device-detail>

get_linecard_details(*device_uuid*, *headers=None*, ***request_parameters*)

Get line card detail for a given deviceuuid. Response will contain serial no, part no, switch no and slot no.

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. instanceuuid of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-linecard-details>

poe_details_(*device_uuid*, *headers=None*, ***request_parameters*)

Returns POE details for device. .

Args:

device_uuid(*basestring*): deviceUuid path parameter. uuid of the device . *headers*(*dict*): Dictionary of HTTP Headers to send with the Request

****request_parameters: Additional request parameters (provides support for parameters that may be added in the future).**

Returns:

MyDict: JSON response. Access the object's properties by using the dot notation or the bracket notation.

Raises:

TypeError: If the parameter types are incorrect. **MalformedRequest**: If the request body created is invalid. **ApiError**: If the DNA Center cloud returns an error.

poe_details(*device_uuid*, *headers=None*, ***request_parameters*)

Returns POE details for device. .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. uuid of the device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!poe-details>

get_supervisor_card_detail(*device_uuid*, *headers=None*, ***request_parameters*)

Get supervisor card detail for a given deviceuuid. Response will contain serial no, part no, switch no and slot no. .

Parameters

- **device_uuid** (*basestring*) – deviceUuid path parameter. instanceuuid of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-supervisor-card-detail>**get_device_by_id**(*id*, *headers=None*, ***request_parameters*)

Returns the network device details for the given device ID .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-device-by-id>**delete_device_by_id**(*id*, *clean_config=None*, *headers=None*, ***request_parameters*)

Deletes the network device for the given Id .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **clean_config** (*bool*) – cleanConfig query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict*

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-device-by-id>

get_device_summary(*id*, *headers=None*, ***request_parameters*)

Returns brief summary of device info such as hostname, management IP address for the given device Id .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-summary>

get_polling_interval_by_id(*id*, *headers=None*, ***request_parameters*)

Returns polling interval by device id .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-polling-interval-by-id>

get_organization_list_for_meraki(*id*, *headers=None*, ***request_parameters*)

Returns list of organizations for meraki dashboard .

Parameters

- **id** (*basestring*) – id path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-organization-list-for-meraki>

get_device_interface_vlans(*id*, *interface_type=None*, *headers=None*, ***request_parameters*)

Returns Device Interface VLANs .

Parameters

- **id** (*basestring*) – id path parameter.
- **interface_type** (*basestring*) – interfaceType query parameter. Vlan associated with sub-interface .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-interface-vlans>

get_wireless_lan_controller_details_by_id(*id*, *headers=None*, ***request_parameters*)

Returns the wireless lan controller info with given device ID .

Parameters

- **id** (*basestring*) – id path parameter. Device ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-wireless-lan-controller-details-by-id>

get_device_config_by_id(*network_device_id*, *headers=None*, ***request_parameters*)

Returns the device config by specified device ID .

Parameters

- **network_device_id** (*basestring*) – networkDeviceId path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-config-by-id>

get_network_device_by_pagination_range(*records_to_return*, *start_index*, *headers=None*,
***request_parameters*)

Returns the list of network devices for the given pagination range. The maximum number of records that can be retrieved is 500 .

Parameters

- **start_index** (*int*) – startIndex path parameter. Start index [≥ 1] .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return [$1 \leq \text{recordsToReturn} \leq 500$] .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-network-device-by-pagination-range>

discovery**class Discovery**

Cisco DNA Center Discovery API (version: 2.3.5.3).

Wraps the DNA Center Discovery API and exposes the API as native Python methods that return native Python objects.

delete_all_discovery(*headers=None*, ***request_parameters*)

Stops all the discoveries and removes them .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!delete-all-discovery>

```
updates_discovery_by_id(attributeInfo=None, cdpLevel=None, deviceIds=None,
                        discoveryCondition=None, discoveryStatus=None, discoveryType=None,
                        enablePasswordList=None, globalCredentialIdList=None,
                        httpReadCredential=None, httpWriteCredential=None, id=None,
                        ipAddressList=None, ipFilterList=None, isAutoCdp=None, lldpLevel=None,
                        name=None, netconfPort=None, numDevices=None, parentDiscoveryId=None,
                        passwordList=None, preferredMgmtIPMethod=None, protocolOrder=None,
                        retryCount=None, snmpAuthPassphrase=None, snmpAuthProtocol=None,
                        snmpMode=None, snmpPrivPassphrase=None, snmpPrivProtocol=None,
                        snmpRoCommunity=None, snmpRoCommunityDesc=None,
                        snmpRwCommunity=None, snmpRwCommunityDesc=None,
                        snmpUserName=None, timeOut=None, updateMgmtIp=None,
                        userNameList=None, headers=None, payload=None, active_validation=True,
                        **request_parameters)
```

Stops or starts an existing discovery .

Parameters

- **attributeInfo** (*object*) – Discovery's attributeInfo.
- **cdpLevel** (*integer*) – Discovery's cdpLevel.
- **deviceIds** (*string*) – Discovery's deviceIds.
- **discoveryCondition** (*string*) – Discovery's discoveryCondition.
- **discoveryStatus** (*string*) – Discovery's discoveryStatus.
- **discoveryType** (*string*) – Discovery's discoveryType.
- **enablePasswordList** (*string*) – Discovery's enablePasswordList.
- **globalCredentialIdList** (*list*) – Discovery's globalCredentialIdList (list of strings).
- **httpReadCredential** (*object*) – Discovery's httpReadCredential.
- **httpWriteCredential** (*object*) – Discovery's httpWriteCredential.
- **id** (*string*) – Discovery's id.
- **ipAddressList** (*string*) – Discovery's ipAddressList.
- **ipFilterList** (*string*) – Discovery's ipFilterList.
- **isAutoCdp** (*boolean*) – Discovery's isAutoCdp.
- **lldpLevel** (*integer*) – Discovery's lldpLevel.
- **name** (*string*) – Discovery's name.
- **netconfPort** (*string*) – Discovery's netconfPort.

- **numDevices** (*integer*) – Discovery’s numDevices.
- **parentDiscoveryId** (*string*) – Discovery’s parentDiscoveryId.
- **passwordList** (*string*) – Discovery’s passwordList.
- **preferredMgmtIPMethod** (*string*) – Discovery’s preferredMgmtIPMethod.
- **protocolOrder** (*string*) – Discovery’s protocolOrder.
- **retryCount** (*integer*) – Discovery’s retryCount.
- **snmpAuthPassphrase** (*string*) – Discovery’s snmpAuthPassphrase.
- **snmpAuthProtocol** (*string*) – Discovery’s snmpAuthProtocol.
- **snmpMode** (*string*) – Discovery’s snmpMode.
- **snmpPrivPassphrase** (*string*) – Discovery’s snmpPrivPassphrase.
- **snmpPrivProtocol** (*string*) – Discovery’s snmpPrivProtocol.
- **snmpRoCommunity** (*string*) – Discovery’s snmpRoCommunity.
- **snmpRoCommunityDesc** (*string*) – Discovery’s snmpRoCommunityDesc.
- **snmpRwCommunity** (*string*) – Discovery’s snmpRwCommunity.
- **snmpRwCommunityDesc** (*string*) – Discovery’s snmpRwCommunityDesc.
- **snmpUserName** (*string*) – Discovery’s snmpUserName.
- **timeOut** (*integer*) – Discovery’s timeOut.
- **updateMgmtIp** (*boolean*) – Discovery’s updateMgmtIp.
- **userNameList** (*string*) – Discovery’s userNameList.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

<https://developer.cisco.com/docs/dna-center/#!updates-discovery-by-id>

```
start_discovery(cdpLevel=None, discoveryType=None, enablePasswordList=None,  
globalCredentialIdList=None, httpReadCredential=None, httpWriteCredential=None,  
ipAddressList=None, ipFilterList=None, lldpLevel=None, name=None,  
netconfPort=None, passwordList=None, preferredMgmtIPMethod=None,  
protocolOrder=None, retry=None, snmpAuthPassphrase=None,  
snmpAuthProtocol=None, snmpMode=None, snmpPrivPassphrase=None,  
snmpPrivProtocol=None, snmpROCommunity=None, snmpROCommunityDesc=None,  
snmpRWCommunity=None, snmpRWCommunityDesc=None, snmpUserName=None,  
snmpVersion=None, timeout=None, userNameList=None, headers=None, payload=None,  
active_validation=True, **request_parameters)
```

Initiates discovery with the given parameters .

Parameters

- **cdpLevel** (*integer*) – Discovery’s CDP level to which neighbor devices to be discovered .
- **discoveryType** (*string*) – Discovery’s Type of Discovery. ‘SINGLE’, ‘RANGE’, ‘MULTI RANGE’, ‘CDP’, ‘LLDP’, ‘CIDR’ .
- **enablePasswordList** (*list*) – Discovery’s Enable Password of the devices to be discovered (list of strings).
- **globalCredentialIdList** (*list*) – Discovery’s Global Credential Ids to be used for discovery (list of strings).
- **httpReadCredential** (*object*) – Discovery’s httpReadCredential.
- **httpWriteCredential** (*object*) – Discovery’s httpWriteCredential.
- **ipAddressList** (*string*) – Discovery’s IP Address of devices to be discovered. Ex: ‘172.30.0.1’ for SINGLE, CDP and LLDP; ‘72.30.0.1-172.30.0.4’ for RANGE; ‘72.30.0.1-172.30.0.4,172.31.0.1-172.31.0.4’ for MULTI RANGE; ‘172.30.0.1/20’ for CIDR .
- **ipFilterList** (*list*) – Discovery’s IP Addresses of the devices to be filtered out during discovery (list of strings).
- **lldpLevel** (*integer*) – Discovery’s LLDP level to which neighbor devices to be discovered .
- **name** (*string*) – Discovery’s Name of the discovery .
- **netconfPort** (*string*) – Discovery’s Netconf Port. It will need valid SSH credentials to work .
- **passwordList** (*list*) – Discovery’s Password of the devices to be discovered (list of strings).
- **preferredMgmtIPMethod** (*string*) – Discovery’s Preferred Management IP Method. ‘None’ or ‘UseLoopBack’. Default is ‘None’ .
- **protocolOrder** (*string*) – Discovery’s Order of protocol (ssh/telnet) in which device connection will be tried. Ex: ‘telnet’: only telnet; ‘ssh,telnet’: ssh with higher order than telnet .
- **retry** (*integer*) – Discovery’s Number of times to try establishing connection to device .
- **snmpAuthPassphrase** (*string*) – Discovery’s Auth Pass phrase for SNMP .
- **snmpAuthProtocol** (*string*) – Discovery’s SNMP auth protocol. SHA’ or ‘MD5’ .

- **snmpMode** (*string*) – Discovery’s Mode of SNMP. ‘AUTHPRIV’ or ‘AUTHNOPRIV’ or ‘NOAUTHNOPRIV’ .
- **snmpPrivPassphrase** (*string*) – Discovery’s Pass phrase for SNMP privacy .
- **snmpPrivProtocol** (*string*) – Discovery’s SNMP privacy protocol. ‘DES’ or ‘AES128’ .
- **snmpROCommunity** (*string*) – Discovery’s Snmp RO community of the devices to be discovered .
- **snmpROCommunityDesc** (*string*) – Discovery’s Description for Snmp RO community .
- **snmpRWCommunity** (*string*) – Discovery’s Snmp RW community of the devices to be discovered .
- **snmpRWCommunityDesc** (*string*) – Discovery’s Description for Snmp RW community .
- **snmpUserName** (*string*) – Discovery’s SNMP username of the device .
- **snmpVersion** (*string*) – Discovery’s Version of SNMP. v2 or v3 .
- **timeout** (*integer*) – Discovery’s Time to wait for device response in seconds .
- **userNameList** (*list*) – Discovery’s Username of the devices to be discovered (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/start-discovery>

get_count_of_all_discovery_jobs(*headers=None, **request_parameters*)

Returns the count of all available discovery jobs .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-count-of-all-discovery-jobs>

get_discovery_jobs_by_ip(*ip_address*, *limit=None*, *name=None*, *offset=None*, *headers=None*,
***request_parameters*)

Returns the list of discovery jobs for the given IP .

Parameters

- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **ip_address** (*basestring*) – ipAddress query parameter.
- **name** (*basestring*) – name query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-discovery-jobs-by-ip>

delete_discovery_by_id(*id*, *headers=None*, ***request_parameters*)

Stops the discovery for the given Discovery ID and removes it. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-discovery-by-id>

get_discovery_by_id(*id*, *headers=None*, ***request_parameters*)

Returns discovery by Discovery ID. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-discovery-by-id>

get_list_of_discoveries_by_discovery_id(*id*, *ip_address=None*, *limit=None*, *offset=None*, *headers=None*, ***request_parameters*)

Returns the list of discovery jobs for the given Discovery ID. The results can be optionally filtered based on IP. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **offset** (*int*) – offset query parameter.

- **limit** (*int*) – limit query parameter.
- **ip_address** (*basestring*) – ipAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-list-of-discoveries-by-discovery-id>

get_discovered_network_devices_by_discovery_id(*id*, *task_id=None*, *headers=None*,
***request_parameters*)

Returns the network devices discovered for the given Discovery ID. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **task_id** (*basestring*) – taskId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-discovered-network-devices-by-discovery-id>

get_devices_discovered_by_id(*id*, *task_id*=None, *headers*=None, ***request_parameters*)

Returns the count of network devices discovered in the given discovery. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **task_id** (*basestring*) – taskId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-devices-discovered-by-id>

get_discovered_devices_by_range(*id*, *records_to_return*, *start_index*, *task_id*=None, *headers*=None, ***request_parameters*)

Returns the network devices discovered for the given discovery and for the given range. The maximum number of records that can be retrieved is 500. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **task_id** (*basestring*) – taskId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-discovered-devices-by-range>

```
get_network_devices_from_discovery(id, clistatus=None, http_status=None, ip_address=None,
                                   netconf_status=None, ping_status=None, snmp_status=None,
                                   sort_by=None, sort_order=None, task_id=None, headers=None,
                                   **request_parameters)
```

Returns the network devices from a discovery job based on given filters. Discovery ID can be obtained using the “Get Discoveries by range” API. .

Parameters

- **id** (*basestring*) – id path parameter. Discovery ID .
- **task_id** (*basestring*) – taskId query parameter.
- **sort_by** (*basestring*) – sortBy query parameter.
- **sort_order** (*basestring*) – sortOrder query parameter.
- **ip_address** (*basestring*, *list*, *set*, *tuple*) – ipAddress query parameter.
- **ping_status** (*basestring*, *list*, *set*, *tuple*) – pingStatus query parameter.
- **snmp_status** (*basestring*, *list*, *set*, *tuple*) – snmpStatus query parameter.
- **clistatus** (*basestring*, *list*, *set*, *tuple*) – cliStatus query parameter.
- **netconf_status** (*basestring*, *list*, *set*, *tuple*) – netconfStatus query parameter.
- **http_status** (*basestring*, *list*, *set*, *tuple*) – httpStatus query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-network-devices-from-discovery>

delete_discovery_by_specified_range(*records_to_delete*, *start_index*, *headers=None*,
***request_parameters*)

Stops discovery for the given range and removes them .

Parameters

- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_delete** (*int*) – recordsToDelete path parameter. Number of records to delete .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/delete-discovery-by-specified-range>

get_discoveries_by_range(*records_to_return*, *start_index*, *headers=None*, ***request_parameters*)

Returns the discovery by specified range .

Parameters

- **start_index** (*int*) – startIndex path parameter. Start index .
- **records_to_return** (*int*) – recordsToReturn path parameter. Number of records to return .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-discoveries-by-range>

get_global_credentials(*credential_sub_type*, *order=None*, *sort_by=None*, *headers=None*,
***request_parameters*)

Returns global credential for the given credential sub type .

Parameters

- **credential_sub_type** (*basestring*) – credentialSubType query parameter. Credential type as CLI / SNMPV2_READ_COMMUNITY / SNMPV2_WRITE_COMMUNITY / SNMPV3 / HTTP_WRITE / HTTP_READ / NETCONF .
- **sort_by** (*basestring*) – sortBy query parameter.
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-global-credentials>

update_cli_credentials(*comments=None*, *credentialType=None*, *description=None*,
enablePassword=None, *id=None*, *instanceTenantId=None*, *instanceUuid=None*,
password=None, *username=None*, *headers=None*, *payload=None*,
active_validation=True, ***request_parameters*)

Updates global CLI credentials .

Parameters

- **comments** (*string*) – Discovery's comments.
- **credentialType** (*string*) – Discovery's credentialType. Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's description.
- **enablePassword** (*string*) – Discovery's enablePassword.
- **id** (*string*) – Discovery's id.
- **instanceTenantId** (*string*) – Discovery's instanceTenantId.
- **instanceUuid** (*string*) – Discovery's instanceUuid.
- **password** (*string*) – Discovery's password.

- **username** (*string*) – Discovery’s username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-cli-credentials>

create_cli_credentials(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global CLI credential .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-cli-credentials>

```
create_http_read_credentials(headers=None, payload=None, active_validation=True,  
                             **request_parameters)
```

Adds HTTP read credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-http-read-credentials>

```
update_http_read_credential(comments=None, credentialType=None, description=None, id=None,  
                             instanceTenantId=None, instanceUuid=None, password=None,  
                             port=None, secure=None, username=None, headers=None,  
                             payload=None, active_validation=True, **request_parameters)
```

Updates global HTTP Read credential .

Parameters

- **comments** (*string*) – Discovery's comments.
- **credentialType** (*string*) – Discovery's credentialType. Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's description.
- **id** (*string*) – Discovery's id.
- **instanceTenantId** (*string*) – Discovery's instanceTenantId.
- **instanceUuid** (*string*) – Discovery's instanceUuid.
- **password** (*string*) – Discovery's password.
- **port** (*integer*) – Discovery's port.
- **secure** (*boolean*) – Discovery's secure.
- **username** (*string*) – Discovery's username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.

- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-http-read-credential>

```
update_http_write_credentials(comments=None, credentialType=None, description=None, id=None,
                             instanceTenantId=None, instanceUuid=None, password=None,
                             port=None, secure=None, username=None, headers=None,
                             payload=None, active_validation=True, **request_parameters)
```

Updates global HTTP write credentials .

Parameters

- **comments** (*string*) – Discovery's comments.
- **credentialType** (*string*) – Discovery's credentialType. Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's description.
- **id** (*string*) – Discovery's id.
- **instanceTenantId** (*string*) – Discovery's instanceTenantId.
- **instanceUuid** (*string*) – Discovery's instanceUuid.
- **password** (*string*) – Discovery's password.
- **port** (*integer*) – Discovery's port.
- **secure** (*boolean*) – Discovery's secure.
- **username** (*string*) – Discovery's username.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!update-http-write-credentials>

```
create_http_write_credentials(headers=None, payload=None, active_validation=True,  
                               **request_parameters)
```

Adds global HTTP write credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!create-http-write-credentials>

```
update_netconf_credentials(comments=None, credentialType=None, description=None, id=None,  
                             instanceTenantId=None, instanceUuid=None, netconfPort=None,  
                             headers=None, payload=None, active_validation=True,  
                             **request_parameters)
```

Updates global netconf credentials .

Parameters

- **comments** (*string*) – Discovery's comments.
- **credentialType** (*string*) – Discovery's credentialType. Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's description.
- **id** (*string*) – Discovery's id.

- **instanceTenantId** (*string*) – Discovery’s instanceTenantId.
- **instanceUuid** (*string*) – Discovery’s instanceUuid.
- **netconfPort** (*string*) – Discovery’s netconfPort.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-netconf-credentials>

create_netconf_credentials(*headers=None, payload=None, active_validation=True, **request_parameters*)

Adds global netconf credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-netconf-credentials>

```
update_snmp_read_community(comments=None, credentialType=None, description=None,  
                           instanceUuid=None, readCommunity=None, headers=None,  
                           payload=None, active_validation=True, **request_parameters)
```

Updates global SNMP read community .

Parameters

- **comments** (*string*) – Discovery’s Comments to identify the credential .
- **credentialType** (*string*) – Discovery’s Credential type to identify the application that uses the credential . Available values are ‘GLOBAL’ and ‘APP’.
- **description** (*string*) – Discovery’s Name/Description of the credential .
- **instanceUuid** (*string*) – Discovery’s instanceUuid.
- **readCommunity** (*string*) – Discovery’s SNMP read community. NO!\$DATA!\$ for no value change .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-snmp-read-community>

```
create_snmp_read_community(headers=None, payload=None, active_validation=True,  
                           **request_parameters)
```

Adds global SNMP read community .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!create-snmp-read-community>

```
create_snmp_write_community(headers=None, payload=None, active_validation=True,
                             **request_parameters)
```

Adds global SNMP write community .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!create-snmp-write-community>

```
update_snmp_write_community(comments=None, credentialType=None, description=None,
                             instanceUuid=None, writeCommunity=None, headers=None,
                             payload=None, active_validation=True, **request_parameters)
```

Updates global SNMP write community .

Parameters

- **comments** (*string*) – Discovery's Comments to identify the credential .
- **credentialType** (*string*) – Discovery's Credential type to identify the application that uses the credential . Available values are 'GLOBAL' and 'APP'.
- **description** (*string*) – Discovery's Name/Description of the credential .
- **instanceUuid** (*string*) – Discovery's instanceUuid.

- **writeCommunity** (*string*) – Discovery’s SNMP write community. NO!\$DATA!\$ for no value change .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-snmp-write-community>

```
update_snmpv3_credentials(authPassword=None, authType=None, comments=None,
                           credentialType=None, description=None, id=None, instanceTenantId=None,
                           instanceUuid=None, privacyPassword=None, privacyType=None,
                           snmpMode=None, username=None, headers=None, payload=None,
                           active_validation=True, **request_parameters)
```

Updates global SNMPv3 credential .

Parameters

- **authPassword** (*string*) – Discovery’s authPassword.
- **authType** (*string*) – Discovery’s authType. Available values are ‘SHA’ and ‘MD5’.
- **comments** (*string*) – Discovery’s comments.
- **credentialType** (*string*) – Discovery’s credentialType. Available values are ‘GLOBAL’ and ‘APP’.
- **description** (*string*) – Discovery’s description.
- **id** (*string*) – Discovery’s id.
- **instanceTenantId** (*string*) – Discovery’s instanceTenantId.
- **instanceUuid** (*string*) – Discovery’s instanceUuid.
- **privacyPassword** (*string*) – Discovery’s privacyPassword.
- **privacyType** (*string*) – Discovery’s privacyType. Available values are ‘DES’ and ‘AES128’.
- **snmpMode** (*string*) – Discovery’s snmpMode. Available values are ‘AUTHPRIV’, ‘AUTHNOPRIV’ and ‘NOAUTHNOPRIV’.
- **username** (*string*) – Discovery’s username.

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-snmpv3-credentials>

```
create_snmpv3_credentials(headers=None, payload=None, active_validation=True,  
                           **request_parameters)
```

Adds global SNMPv3 credentials .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-snmpv3-credentials>

```
delete_global_credentials_by_id(global_credential_id, headers=None, **request_parameters)
```

Deletes global credential for the given ID .

Parameters

- **global_credential_id** (*basestring*) – globalCredentialId path parameter. ID of global-credential .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-global-credentials-by-id>

update_global_credentials(*global_credential_id*, *siteUuids=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Update global credential for network devices in site(s) .

Parameters

- **siteUuids** (*list*) – Discovery's siteUuids (list of strings).
- **global_credential_id** (*basestring*) – globalCredentialId path parameter. Global credential Uuid .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-global-credentials>

get_credential_sub_type_by_credential_id(*id*, *headers=None*, ***request_parameters*)

Returns the credential sub type for the given Id .

Parameters

- **id** (*basestring*) – id path parameter. Global Credential ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-credential-sub-type-by-credential-id>

get_snmp_properties(*headers=None*, ***request_parameters*)

Returns SNMP properties .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-snmp-properties>

create_update_snmp_properties(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Adds SNMP properties .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-update-snmp-properties>

```
update_global_credentials_v2(cliCredential=None, httpsRead=None, httpsWrite=None,
                             snmpV2cRead=None, snmpV2cWrite=None, snmpV3=None,
                             headers=None, payload=None, active_validation=True,
                             **request_parameters)
```

API to update device credentials. Multiple credentials can be passed at once, but only a single credential of a given type can be passed at once. Please refer sample Request Body for more information. .

Parameters

- **cliCredential** (*object*) – Discovery's cliCredential.
- **httpsRead** (*object*) – Discovery's httpsRead.
- **httpsWrite** (*object*) – Discovery's httpsWrite.
- **snmpV2cRead** (*object*) – Discovery's snmpV2cRead.
- **snmpV2cWrite** (*object*) – Discovery's snmpV2cWrite.
- **snmpV3** (*object*) – Discovery's snmpV3.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-global-credentials-v2>

```
create_global_credentials_v2(cliCredential=None, httpsRead=None, httpsWrite=None,
                             snmpV2cRead=None, snmpV2cWrite=None, snmpV3=None,
                             headers=None, payload=None, active_validation=True,
                             **request_parameters)
```

API to create new global credentials. Multiple credentials of various types can be passed at once. Please refer sample Request Body for more information. .

Parameters

- **cliCredential** (*list*) – Discovery's cliCredential (list of objects).
- **httpsRead** (*list*) – Discovery's httpsRead (list of objects).
- **httpsWrite** (*list*) – Discovery's httpsWrite (list of objects).
- **snmpV2cRead** (*list*) – Discovery's snmpV2cRead (list of objects).
- **snmpV2cWrite** (*list*) – Discovery's snmpV2cWrite (list of objects).
- **snmpV3** (*list*) – Discovery's snmpV3 (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-global-credentials-v2>

```
get_all_global_credentials_v2(headers=None, **request_parameters)
```

API to get device credentials' details. It fetches all global credentials of all types at once, without the need to pass any input parameters. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/get-all-global-credentials-v2>

delete_global_credential_v2(*id*, *headers=None*, ***request_parameters*)

Delete a global credential. Only 'id' of the credential has to be passed. .

Parameters

- **id** (*basestring*) – id path parameter. Global Credential id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/delete-global-credential-v2>

eo_x**event_management****class EventManagement**

Cisco DNA Center Event Management API (version: 2.3.5.3).

Wraps the DNA Center Event Management API and exposes the API as native Python methods that return native Python objects.

```
get_auditlog_parent_records(category=None, context=None, description=None, device_id=None,
                             domain=None, end_time=None, event_hierarchy=None, event_id=None,
                             instance_id=None, is_system_events=None, limit=None, name=None,
                             offset=None, order=None, severity=None, site_id=None, sort_by=None,
                             source=None, start_time=None, sub_domain=None, user_id=None,
                             headers=None, **request_parameters)
```

Get Parent Audit Log Event instances from the Event-Hub .

Parameters

- **instance_id** (*basestring*) – instanceId query parameter. InstanceID of the Audit Log. .
- **name** (*basestring*) – name query parameter. Audit Log notification event name. .
- **event_id** (*basestring*) – eventId query parameter. Audit Log notification’s event ID. .
- **category** (*basestring*) – category query parameter. Audit Log notification’s event category. Supported values: INFO, WARN, ERROR, ALERT, TASK_PROGRESS, TASK_FAILURE, TASK_COMPLETE, COMMAND, QUERY, CONVERSATION .
- **severity** (*basestring*) – severity query parameter. Audit Log notification’s event severity. Supported values: 1, 2, 3, 4, 5. .
- **domain** (*basestring*) – domain query parameter. Audit Log notification’s event domain. .
- **sub_domain** (*basestring*) – subDomain query parameter. Audit Log notification’s event sub-domain. .
- **source** (*basestring*) – source query parameter. Audit Log notification’s event source. .
- **user_id** (*basestring*) – userId query parameter. Audit Log notification’s event userId. .
- **context** (*basestring*) – context query parameter. Audit Log notification’s event correlationId. .
- **event_hierarchy** (*basestring*) – eventHierarchy query parameter. Audit Log notification’s event eventHierarchy. Example: “US.CA.San Jose” OR “US.CA” OR “CA.San Jose” Delimiter for hierarchy separation is “.”. .
- **site_id** (*basestring*) – siteId query parameter. Audit Log notification’s siteId. .
- **device_id** (*basestring*) – deviceId query parameter. Audit Log notification’s deviceId. .
- **is_system_events** (*bool*) – isSystemEvents query parameter. Parameter to filter system generated audit-logs. .
- **description** (*basestring*) – description query parameter. String full/partial search (Provided input string is case insensitively matched for records). .
- **offset** (*int*) – offset query parameter. Position of a particular Audit Log record in the data. .
- **limit** (*int*) – limit query parameter. Number of Audit Log records to be returned per page. .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds since Epoch Eg. 1597950637211 (when provided endTime is mandatory) .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds since Epoch Eg. 1597961437211 (when provided startTime is mandatory) .

- **sort_by** (*basestring*) – sortBy query parameter. Sort the Audit Logs by certain fields. Supported values are event notification header attributes. .
- **order** (*basestring*) – order query parameter. Order of the sorted Audit Log records. Default value is desc by timestamp. Supported values: asc, desc. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

`list`

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-auditlog-parent-records>

```
get_auditlog_summary(category=None, context=None, description=None, device_id=None,
                      domain=None, end_time=None, event_hierarchy=None, event_id=None,
                      instance_id=None, is_parent_only=None, is_system_events=None, name=None,
                      parent_instance_id=None, severity=None, site_id=None, source=None,
                      start_time=None, sub_domain=None, user_id=None, headers=None,
                      **request_parameters)
```

Get Audit Log Summary from the Event-Hub .

Parameters

- **parent_instance_id** (*basestring*) – parentInstanceId query parameter. Parent Audit Log record's instanceID. .
- **is_parent_only** (*bool*) – isParentOnly query parameter. Parameter to filter parent only audit-logs. .
- **instance_id** (*basestring*) – instanceId query parameter. InstanceID of the Audit Log. .
- **name** (*basestring*) – name query parameter. Audit Log notification event name. .
- **event_id** (*basestring*) – eventId query parameter. Audit Log notification's event ID. .
- **category** (*basestring*) – category query parameter. Audit Log notification's event category. Supported values: INFO, WARN, ERROR, ALERT, TASK_PROGRESS, TASK_FAILURE, TASK_COMPLETE, COMMAND, QUERY, CONVERSATION .
- **severity** (*basestring*) – severity query parameter. Audit Log notification's event severity. Supported values: 1, 2, 3, 4, 5. .
- **domain** (*basestring*) – domain query parameter. Audit Log notification's event domain. .

- **sub_domain** (*basestring*) – subDomain query parameter. Audit Log notification’s event sub-domain. .
- **source** (*basestring*) – source query parameter. Audit Log notification’s event source. .
- **user_id** (*basestring*) – userId query parameter. Audit Log notification’s event userId. .
- **context** (*basestring*) – context query parameter. Audit Log notification’s event correlationId. .
- **event_hierarchy** (*basestring*) – eventHierarchy query parameter. Audit Log notification’s event eventHierarchy. Example: “US.CA.San Jose” OR “US.CA” OR “CA.San Jose” Delimiter for hierarchy separation is “.”. .
- **site_id** (*basestring*) – siteId query parameter. Audit Log notification’s siteId. .
- **device_id** (*basestring*) – deviceId query parameter. Audit Log notification’s deviceId. .
- **is_system_events** (*bool*) – isSystemEvents query parameter. Parameter to filter system generated audit-logs. .
- **description** (*basestring*) – description query parameter. String full/partial search (Provided input string is case insensitively matched for records). .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds since Epoch Eg. 1597950637211 (when provided endTime is mandatory) .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds since Epoch Eg. 1597961437211 (when provided startTime is mandatory) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-auditlog-summary>

```
get_auditlog_records(category=None, context=None, description=None, device_id=None,
                      domain=None, end_time=None, event_hierarchy=None, event_id=None,
                      instance_id=None, is_system_events=None, limit=None, name=None,
                      offset=None, order=None, parent_instance_id=None, severity=None,
                      site_id=None, sort_by=None, source=None, start_time=None, sub_domain=None,
                      user_id=None, headers=None, **request_parameters)
```

Get Audit Log Event instances from the Event-Hub .

Parameters

- **parent_instance_id** (*basestring*) – parentId query parameter. Parent Audit Log record's instanceID. .
- **instance_id** (*basestring*) – instanceId query parameter. InstanceID of the Audit Log. .
- **name** (*basestring*) – name query parameter. Audit Log notification event name. .
- **event_id** (*basestring*) – eventId query parameter. Audit Log notification's event ID. .
- **category** (*basestring*) – category query parameter. Audit Log notification's event category. Supported values: INFO, WARN, ERROR, ALERT, TASK_PROGRESS, TASK_FAILURE, TASK_COMPLETE, COMMAND, QUERY, CONVERSATION .
- **severity** (*basestring*) – severity query parameter. Audit Log notification's event severity. Supported values: 1, 2, 3, 4, 5. .
- **domain** (*basestring*) – domain query parameter. Audit Log notification's event domain. .
- **sub_domain** (*basestring*) – subDomain query parameter. Audit Log notification's event sub-domain. .
- **source** (*basestring*) – source query parameter. Audit Log notification's event source. .
- **user_id** (*basestring*) – userId query parameter. Audit Log notification's event userId. .
- **context** (*basestring*) – context query parameter. Audit Log notification's event correlationId. .
- **event_hierarchy** (*basestring*) – eventHierarchy query parameter. Audit Log notification's event eventHierarchy. Example: "US.CA.San Jose" OR "US.CA" OR "CA.San Jose" Delimiter for hierarchy separation is ".". .
- **site_id** (*basestring*) – siteId query parameter. Audit Log notification's siteId. .
- **device_id** (*basestring*) – deviceId query parameter. Audit Log notification's deviceId. .
- **is_system_events** (*bool*) – isSystemEvents query parameter. Parameter to filter system generated audit-logs. .
- **description** (*basestring*) – description query parameter. String full/partial search (Provided input string is case insensitively matched for records). .
- **offset** (*int*) – offset query parameter. Position of a particular Audit Log record in the data. .
- **limit** (*int*) – limit query parameter. Number of Audit Log records to be returned per page. .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds since Epoch Eg. 1597950637211 (when provided endTime is mandatory) .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds since Epoch Eg. 1597961437211 (when provided startTime is mandatory) .
- **sort_by** (*basestring*) – sortBy query parameter. Sort the Audit Logs by certain fields. Supported values are event notification header attributes. .
- **order** (*basestring*) – order query parameter. Order of the sorted Audit Log records. Default value is desc by timestamp. Supported values: asc, desc. .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-auditlog-records>

get_status_api_for_events(*execution_id*, *headers=None*, ***request_parameters*)

Get the Status of events API calls with provided executionId as mandatory path parameter .

Parameters

- **execution_id** (*basestring*) – executionId path parameter. Execution ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-status-api-for-events>

update_email_destination(*emailConfigId=None*, *fromEmail=None*, *primarySMTPConfig=None*, *secondarySMTPConfig=None*, *subject=None*, *toEmail=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Update Email Destination .

Parameters

- **emailConfigId** (*string*) – Event Management's Required only for update email configuration .

- **fromEmail** (*string*) – Event Management’s From Email.
- **primarySMTPConfig** (*object*) – Event Management’s primarySMTPConfig.
- **secondarySMTPConfig** (*object*) – Event Management’s secondarySMTPConfig.
- **subject** (*string*) – Event Management’s Subject.
- **toEmail** (*string*) – Event Management’s To Email.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-email-destination>

get_email_destination(*headers=None, **request_parameters*)

Get Email Destination .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-email-destination>

create_email_destination(*emailConfigId=None, fromEmail=None, primarySMTPConfig=None, secondarySMTPConfig=None, subject=None, toEmail=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Create Email Destination .

Parameters

- **emailConfigId** (*string*) – Event Management’s Required only for update email configuration .
- **fromEmail** (*string*) – Event Management’s From Email.
- **primarySMTPConfig** (*object*) – Event Management’s primarySMTPConfig.
- **secondarySMTPConfig** (*object*) – Event Management’s secondarySMTPConfig.
- **subject** (*string*) – Event Management’s Subject.
- **toEmail** (*string*) – Event Management’s To Email.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/create-email-destination>

get_notifications(*category=None, domain=None, end_time=None, event_ids=None, limit=None, namespace=None, offset=None, order=None, severity=None, site_id=None, sort_by=None, source=None, start_time=None, sub_domain=None, tags=None, type=None, headers=None, **request_parameters*)

Get the list of Published Notifications .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. The registered EventId should be provided .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds .
- **category** (*basestring*) – category query parameter.
- **type** (*basestring*) – type query parameter.

- **severity** (*basestring*) – severity query parameter.
- **domain** (*basestring*) – domain query parameter.
- **sub_domain** (*basestring*) – subDomain query parameter. Sub Domain .
- **source** (*basestring*) – source query parameter.
- **offset** (*int*) – offset query parameter. Start Offset .
- **limit** (*int*) – limit query parameter. # of records .
- **sort_by** (*basestring*) – sortBy query parameter. Sort By column .
- **order** (*basestring*) – order query parameter. Ascending/Descending order [asc/desc] .
- **tags** (*basestring*) – tags query parameter.
- **namespace** (*basestring*) – namespace query parameter.
- **site_id** (*basestring*) – siteId query parameter. Site Id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-notifications>

count_of_notifications(*category=None, domain=None, end_time=None, event_ids=None, severity=None, source=None, start_time=None, sub_domain=None, type=None, headers=None, **request_parameters*)

Get the Count of Published Notifications .

Parameters

- **event_ids** (*basestring*) – eventIds query parameter. The registered EventId should be provided .
- **start_time** (*int*) – startTime query parameter. Start Time in milliseconds .
- **end_time** (*int*) – endTime query parameter. End Time in milliseconds .
- **category** (*basestring*) – category query parameter.
- **type** (*basestring*) – type query parameter.
- **severity** (*basestring*) – severity query parameter.
- **domain** (*basestring*) – domain query parameter.

- **sub_domain** (*basestring*) – subDomain query parameter. Sub Domain .
- **source** (*basestring*) – source query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!count-of-notifications>

get_snmp_destination(*config_id=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Get SNMP Destination .

Parameters

- **config_id** (*basestring*) – configId query parameter. List of SNMP configurations .
- **offset** (*int*) – offset query parameter. The number of SNMP configuration's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of SNMP configuration's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-snmp-destination>

get_event_subscriptions(*event_ids=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of Subscriptions's based on provided offset and limit (Deprecated) .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of subscriptions related to the respective eventId .
- **offset** (*int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-event-subscriptions>

delete_event_subscriptions(*subscriptions, headers=None, **request_parameters*)

Delete EventSubscriptions .

Parameters

- **subscriptions** (*basestring*) – subscriptions query parameter. List of EventSubscriptionId's for removal .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!delete-event-subscriptions>

update_event_subscriptions(*headers=None, payload=None, active_validation=True,*
***request_parameters*)

Update SubscriptionEndpoint to list of registered events(Deprecated) .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!update-event-subscriptions>

create_event_subscriptions(*headers=None, payload=None, active_validation=True,*
***request_parameters*)

Subscribe SubscriptionEndpoint to list of registered events (Deprecated) .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-event-subscriptions>

get_email_subscription_details(*instance_id=None, limit=None, name=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters*)

Gets the list of subscription details for specified connectorType .

Parameters

- **name** (*basestring*) – name query parameter. Name of the specific configuration .
- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the specific configuration .
- **offset** (*int*) – offset query parameter. The number of Email Subscription detail's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Email Subscription detail's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-email-subscription-details>

```
get_rest_webhook_subscription_details(instance_id=None, limit=None, name=None, offset=None,
                                       order=None, sort_by=None, headers=None,
                                       **request_parameters)
```

Gets the list of subscription details for specified connectorType .

Parameters

- **name** (*basestring*) – name query parameter. Name of the specific configuration .
- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the specific configuration .
- **offset** (*int*) – offset query parameter. The number of Rest/Webhook Subscription detail's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Rest/Webhook Subscription detail's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-rest-webhook-subscription-details>

```
get_syslog_subscription_details(instance_id=None, limit=None, name=None, offset=None,
                                 order=None, sort_by=None, headers=None, **request_parameters)
```

Gets the list of subscription details for specified connectorType .

Parameters

- **name** (*basestring*) – name query parameter. Name of the specific configuration .
- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the specific configuration .
- **offset** (*int*) – offset query parameter. The number of Syslog Subscription detail's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Syslog Subscription detail's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .

- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-syslog-subscription-details>

count_of_event_subscriptions(*event_ids*, *headers=None*, ***request_parameters*)

Returns the Count of EventSubscriptions .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of subscriptions related to the respective eventIds .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!count-of-event-subscriptions>

create_email_event_subscription(*headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Create Email Subscription Endpoint for list of registered events. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-email-event-subscription>

update_email_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update Email Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-email-event-subscription>

get_email_event_subscriptions(*category=None, domain=None, event_ids=None, limit=None, name=None, offset=None, order=None, sort_by=None, sub_domain=None, type=None, headers=None, **request_parameters*)

Gets the list of email Subscriptions's based on provided query params .

Parameters

- **event_ids** (*basestring*) – eventIds query parameter. List of email subscriptions related to the respective eventIds (Comma separated event ids) .
- **offset** (*int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **domain** (*basestring*) – domain query parameter. List of email subscriptions related to the respective domain .
- **sub_domain** (*basestring*) – subDomain query parameter. List of email subscriptions related to the respective sub-domain .
- **category** (*basestring*) – category query parameter. List of email subscriptions related to the respective category .
- **type** (*basestring*) – type query parameter. List of email subscriptions related to the respective type .
- **name** (*basestring*) – name query parameter. List of email subscriptions related to the respective name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-email-event-subscriptions>

create_rest_webhook_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create Rest/Webhook Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-rest-webhook-event-subscription>

```
get_rest_webhook_event_subscriptions(category=None, domain=None, event_ids=None, limit=None,
                                     name=None, offset=None, order=None, sort_by=None,
                                     sub_domain=None, type=None, headers=None,
                                     **request_parameters)
```

Gets the list of Rest/Webhook Subscriptions's based on provided query params .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of subscriptions related to the respective eventId (Comma separated event ids) .
- **offset** (*int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **domain** (*basestring*) – domain query parameter. List of subscriptions related to the respective domain .
- **sub_domain** (*basestring*) – subDomain query parameter. List of subscriptions related to the respective sub- domain .
- **category** (*basestring*) – category query parameter. List of subscriptions related to the respective category .
- **type** (*basestring*) – type query parameter. List of subscriptions related to the respective type .
- **name** (*basestring*) – name query parameter. List of subscriptions related to the respective name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-rest-webhook-event-subscriptions>

update_rest_webhook_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update Rest/Webhook Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-rest-webhook-event-subscription>

update_syslog_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update Syslog Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-syslog-event-subscription>

create_syslog_event_subscription(*headers=None, payload=None, active_validation=True, **request_parameters*)

Create Syslog Subscription Endpoint for list of registered events .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-syslog-event-subscription>

get_syslog_event_subscriptions(*category=None, domain=None, event_ids=None, limit=None, name=None, offset=None, order=None, sort_by=None, sub_domain=None, type=None, headers=None, **request_parameters*)

Gets the list of Syslog Subscriptions's based on provided offset and limit .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of subscriptions related to the respective eventId (Comma separated event ids) .
- **offset** (*int*) – offset query parameter. The number of Subscriptions's to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of Subscriptions's to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **domain** (*basestring*) – domain query parameter. List of subscriptions related to the respective domain .
- **sub_domain** (*basestring*) – subDomain query parameter. List of subscriptions related to the respective sub- domain .
- **category** (*basestring*) – category query parameter. List of subscriptions related to the respective category .
- **type** (*basestring*) – type query parameter. List of subscriptions related to the respective type .
- **name** (*basestring*) – name query parameter. List of subscriptions related to the respective name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-syslog-event-subscriptions>

```
update_syslog_destination(configId=None, description=None, host=None, name=None, port=None,
                           protocol=None, headers=None, payload=None, active_validation=True,
                           **request_parameters)
```

Update Syslog Destination .

Parameters

- **configId** (*string*) – Event Management's Required only for update syslog configuration .
- **description** (*string*) – Event Management's Description.
- **host** (*string*) – Event Management's Host.

- **name** (*string*) – Event Management’s Name.
- **port** (*string*) – Event Management’s Port.
- **protocol** (*string*) – Event Management’s Protocol. Available values are ‘UDP’ and ‘TCP’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-syslog-destination>

get_syslog_destination(*config_id=None, limit=None, name=None, offset=None, order=None, protocol=None, sort_by=None, headers=None, **request_parameters*)

Get Syslog Destination .

Parameters

- **config_id** (*basestring*) – configId query parameter. Config id of syslog server .
- **name** (*basestring*) – name query parameter. Name of syslog server .
- **protocol** (*basestring*) – protocol query parameter. Protocol of syslog server .
- **offset** (*int*) – offset query parameter. The number of syslog configuration’s to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of syslog configuration’s to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-syslog-destination>

```
create_syslog_destination(configId=None, description=None, host=None, name=None, port=None,  
                           protocol=None, headers=None, payload=None, active_validation=True,  
                           **request_parameters)
```

Create Syslog Destination .

Parameters

- **configId** (*string*) – Event Management's Required only for update syslog configuration .
- **description** (*string*) – Event Management's Description.
- **host** (*string*) – Event Management's Host.
- **name** (*string*) – Event Management's Name.
- **port** (*string*) – Event Management's Port.
- **protocol** (*string*) – Event Management's Protocol. Available values are 'UDP' and 'TCP'.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!create-syslog-destination>

```
create_webhook_destination(description=None, headers=None, method=None, name=None,  
trustCert=None, url=None, webhookId=None, payload=None,  
active_validation=True, **request_parameters)
```

Create Webhook Destination .

Parameters

- **description** (*string*) – Event Management’s Description.
- **headers** (*list*) – Event Management’s headers (list of objects).
- **method** (*string*) – Event Management’s Method. Available values are ‘POST’ and ‘PUT’.
- **name** (*string*) – Event Management’s Name.
- **trustCert** (*boolean*) – Event Management’s Trust Cert.
- **url** (*string*) – Event Management’s Url.
- **webhookId** (*string*) – Event Management’s Required only for update webhook configuration . .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-webhook-destination>

```
update_webhook_destination(description=None, headers=None, method=None, name=None,  
trustCert=None, url=None, webhookId=None, payload=None,  
active_validation=True, **request_parameters)
```

Update Webhook Destination .

Parameters

- **description** (*string*) – Event Management’s Description.
- **method** (*string*) – Event Management’s Method. Available values are ‘POST’ and ‘PUT’.
- **name** (*string*) – Event Management’s Name.
- **trustCert** (*boolean*) – Event Management’s Trust Cert.
- **url** (*string*) – Event Management’s Url.

- **webhookId** (*string*) – Event Management’s Required only for update webhook configuration .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-webhook-destination>

get_webhook_destination(*limit=None, offset=None, order=None, sort_by=None, webhook_ids=None, headers=None, **request_parameters*)

Get Webhook Destination .

Parameters

- **webhook_ids** (*basestring*) – webhookIds query parameter. List of webhook configurations .
- **offset** (*int*) – offset query parameter. The number of webhook configuration’s to offset in the resultset whose default value 0 .
- **limit** (*int*) – limit query parameter. The number of webhook configuration’s to limit in the resultset whose default value 10 .
- **sort_by** (*basestring*) – sortBy query parameter. SortBy field name .
- **order** (*basestring*) – order query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-webhook-destination>

get_events(tags, event_id=None, limit=None, offset=None, order=None, sort_by=None, headers=None, **request_parameters)

Gets the list of registered Events with provided eventIds or tags as mandatory .

Parameters

- **event_id** (basestring) – eventId query parameter. The registered EventId should be provided .
- **tags** (basestring) – tags query parameter. The registered Tags should be provided .
- **offset** (int) – offset query parameter. The number of Registries to offset in the resultset whose default value 0 .
- **limit** (int) – limit query parameter. The number of Registries to limit in the resultset whose default value 10 .
- **sort_by** (basestring) – sortBy query parameter. SortBy field name .
- **order** (basestring) – order query parameter.
- **headers** (dict) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-events>

count_of_events(tags, event_id=None, headers=None, **request_parameters)

Get the count of registered events with provided eventIds or tags as mandatory .

Parameters

- **event_id** (basestring) – eventId query parameter. The registered EventId should be provided .
- **tags** (basestring) – tags query parameter. The registered Tags should be provided .
- **headers** (dict) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!count-of-events>

get_eventartifacts(*event_ids=None, limit=None, offset=None, order=None, search=None, sort_by=None, tags=None, headers=None, **request_parameters*)

Gets the list of artifacts based on provided offset and limit .

Parameters

- **event_ids** (*basestring*) – eventId query parameter. List of eventId .
- **tags** (*basestring*) – tags query parameter. Tags defined .
- **offset** (*int*) – offset query parameter. Record start offset .
- **limit** (*int*) – limit query parameter. # of records to return in result set .
- **sort_by** (*basestring*) – sortBy query parameter. Sort by field .
- **order** (*basestring*) – order query parameter. sorting order (asc/desc) .
- **search** (*basestring*) – search query parameter. find matches in name, description, eventId, type, category .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-eventartifacts>

eventartifact_count(*headers=None, **request_parameters*)

Get the count of registered event artifacts with provided eventIds or tags as mandatory .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!eventartifact-count>

get_connector_types(*headers=None, **request_parameters*)

Get the list of connector types .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-connector-types>

fabric_wireless

class FabricWireless

Cisco DNA Center Fabric Wireless API (version: 2.3.5.3).

Wraps the DNA Center Fabric Wireless API and exposes the API as native Python methods that return native Python objects.

add_ssid_to_ip_pool_mapping(*scalableGroupName=None, siteNameHierarchy=None, ssidNames=None, vlanName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Add SSID to IP Pool Mapping. .

Parameters

- **scalableGroupName** (*string*) – Fabric Wireless’s Scalable Group Name .
- **siteNameHierarchy** (*string*) – Fabric Wireless’s Site Name Hierarchy .
- **ssidNames** (*list*) – Fabric Wireless’s List of SSIDs (list of strings).
- **vlanName** (*string*) – Fabric Wireless’s VLAN Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object’s properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-ssid-to-ip-pool-mapping>

update_ssid_to_ip_pool_mapping(*scalableGroupName=None, siteNameHierarchy=None, ssidNames=None, vlanName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Update SSID to IP Pool Mapping. .

Parameters

- **scalableGroupName** (*string*) – Fabric Wireless’s Scalable Group Name .
- **siteNameHierarchy** (*string*) – Fabric Wireless’s Site Name Hierarchy .
- **ssidNames** (*list*) – Fabric Wireless’s List of SSIDs (list of strings).
- **vlanName** (*string*) – Fabric Wireless’s VLAN Name .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-ssid-to-ip-pool-mapping>

get_ssid_to_ip_pool_mapping(*site_name_hierarchy*, *vlan_name*, *headers=None*, ***request_parameters*)

Get SSID to IP Pool Mapping .

Parameters

- **vlan_name** (*basestring*) – vlanName query parameter. VLAN Name .
- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. Site Name Heirarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-ssid-to-ip-pool-mapping>

remove_w_l_c_from_fabric_domain(*device_ipaddress*, *headers=None*, ***request_parameters*)

Remove WLC from Fabric Domain .

Parameters

- **device_ipaddress** (*basestring*) – deviceIPAddress query parameter. Device Management IP Address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!remove-w-l-c-from-fabric-domain>

```
add_w_l_c_to_fabric_domain(deviceName=None, siteNameHierarchy=None, headers=None,  
                           payload=None, active_validation=True, **request_parameters)
```

Add WLC to Fabric Domain .

Parameters

- **deviceName** (*string*) – Fabric Wireless's EWLC Device Name .
- **siteNameHierarchy** (*string*) – Fabric Wireless's Site Name Hierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-w-l-c-to-fabric-domain>

file**class File**

Cisco DNA Center File API (version: 2.3.5.3).

Wraps the DNA Center File API and exposes the API as native Python methods that return native Python objects.

get_list_of_available_namespaces(*headers=None, **request_parameters*)

Returns list of available namespaces .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-list-of-available-namespaces>

get_list_of_files(*name_space, headers=None, **request_parameters*)

Returns list of files under a specific namespace .

Parameters

- **name_space** (*basestring*) – nameSpace path parameter. A listing of fileId's .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-list-of-files>

download_a_file_by_fileid(*file_id*, *dirpath=None*, *save_file=None*, *filename=None*, *headers=None*,
***request_parameters*)

Downloads a file specified by fileId .

Parameters

- **file_id** (*basestring*) – fileId path parameter. File Identification number .
- **dirpath** (*basestring*) – Directory absolute path. Defaults to os.getcwd().
- **save_file** (*bool*) – Enable or disable automatic file creation of raw response.
- **filename** (*basestring*) – The filename used to save the download file.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

The DownloadResponse wrapper. Wraps the urllib3.response.HTTPResponse. For more information check the [urllib3 documentation](#)

Return type

DownloadResponse

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.
- **DownloadFailure** – If was not able to download the raw
- **response to a file.** –

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!download-a-file-by-fileid>

upload_file(*multipart_fields*, *multipart_monitor_callback*, *name_space*, *headers=None*,
***request_parameters*)

Uploads a new file within a specific nameSpace .

The following code gives an example of the multipart_fields.

```
multipart_fields={'file': ('file.zip', open('file.zip', 'rb'))}
multipart_fields={'file': ('file.txt', open('file.txt', 'rb')),
                  'text/plain',
                  {'X-My-Header': 'my-value'}}}
multipart_fields=[('images', ('foo.png', open('foo.png', 'rb'),
                              'image/png')),
                  ('images', ('bar.png', open('bar.png', 'rb'), 'image/png'))]
```

The following example demonstrates how to use *multipart_monitor_callback=create_callback* to create a progress bar using clint.

```

from clint.textui.progress import Bar
def create_callback(encoder):
    encoder_len = encoder.len
    bar = Bar(expected_size=encoder_len,
              filled_char="=")
    def callback(monitor):
        bar.show(monitor.bytes_read)
    return callback

```

Parameters

- **name_space** (*basestring*) – nameSpace path parameter.
- **multipart_fields** (*dict*) – Fields from which to create a multipart/form-data body.
- **multipart_monitor_callback** (*function*) – function used to monitor the progress of the upload.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!upload-file>

health_and_performance

class HealthAndPerformance

Cisco DNA Center Health and Performance API (version: 2.3.5.3).

Wraps the DNA Center Health and Performance API and exposes the API as native Python methods that return native Python objects.

system_health(*domain=None, limit=None, offset=None, subdomain=None, summary=None, headers=None, **request_parameters*)

This API retrieves the latest system events .

Parameters

- **summary** (*bool*) – summary query parameter. Fetch the latest high severity event .

- **domain** (*basestring*) – domain query parameter. Fetch system events with this domain. Possible values of domain are listed here : `/dna/platform/app/consumer-portal/developer-toolkit/events` .
- **subdomain** (*basestring*) – subdomain query parameter. Fetch system events with this subdomain. Possible values of subdomain are listed here : `/dna/platform/app/consumer-portal/developer-toolkit/events` .
- **limit** (*int*) – limit query parameter.
- **offset** (*int*) – offset query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!system-health>

system_health_count(*domain=None, subdomain=None, headers=None, **request_parameters*)

This API gives the count of the latest system events .

Parameters

- **domain** (*basestring*) – domain query parameter. Fetch system events with this domain. Possible values of domain are listed here : `/dna/platform/app/consumer-portal/developer-toolkit/events` .
- **subdomain** (*basestring*) – subdomain query parameter. Fetch system events with this subdomain. Possible values of subdomain are listed here : `/dna/platform/app/consumer-portal/developer-toolkit/events` .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!system-health-count>

system_performance(*end_time=None, function=None, kpi=None, start_time=None, headers=None, **request_parameters*)

This API gives the aggregated performance indicators. The data can be retrieved for the last 3 months. .

Parameters

- **kpi** (*basestring*) – kpi query parameter. Valid values: cpu,memory,network .
- **function** (*basestring*) – function query parameter. Valid values: sum,average,max .
- **start_time** (*int*) – startTime query parameter. This is the epoch start time in milliseconds from which performance indicator need to be fetched .
- **end_time** (*int*) – endTime query parameter. This is the epoch end time in milliseconds upto which performance indicator need to be fetched .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!system-performance>

system_performance_historical(*end_time=None, kpi=None, start_time=None, headers=None, **request_parameters*)

This API retrieves the historical performance indicators . The data can be retrieved for the last 3 months. .

Parameters

- **kpi** (*basestring*) – kpi query parameter. Fetch historical data for this kpi. Valid values: cpu,memory,network .
- **start_time** (*int*) – startTime query parameter. This is the epoch start time in milliseconds from which performance indicator need to be fetched .
- **end_time** (*int*) – endTime query parameter. This is the epoch end time in milliseconds upto which performance indicator need to be fetched .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!system-performance-historical>

itsm**class Itsm**

Cisco DNA Center ITSM API (version: 2.3.5.3).

Wraps the DNA Center ITSM API and exposes the API as native Python methods that return native Python objects.

get_cmdb_sync_status(*date=None, status=None, headers=None, **request_parameters*)

This API allows to retrieve the detail of CMDB sync status. It accepts two query parameters "status" and "date". The supported values for status field are "Success", "Failed", "Unknown" and date field should be in "YYYY-MM-DD" format. By default all the cmdb sync status will be sent as response and based on the query parameter filtered detail will be sent as response. .

Parameters

- **status** (*basestring*) – status query parameter. Supported values are "Success", "Failed" and "Unknown". Providing other values will result in all the available sync job status. .
- **date** (*basestring*) – date query parameter. Provide date in "YYYY-MM-DD" format .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-cmdb-sync-status>

get_failed_itsm_events(*instance_id=None, headers=None, **request_parameters*)

Used to retrieve the list of integration events that failed to create tickets in ITSM .

Parameters

- **instance_id** (*basestring*) – instanceId query parameter. Instance Id of the failed event as in the Runtime Dashboard .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-failed-itsm-events>

retry_integration_events(*headers=None, payload=None, active_validation=True, **request_parameters*)

Allows retry of multiple failed ITSM event instances. The retry request payload can be given as a list of strings: ["instance1","instance2","instance3",...] A minimum of one instance Id is mandatory. The list of failed event instance Ids can be retrieved using the 'Get Failed ITSM Events' API in the 'instanceId' attribute. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!retry-integration-events>

itsm_integration**class ItsmIntegration**

Cisco DNA Center ITSM Integration API (version: 2.3.5.3).

Wraps the DNA Center ITSM Integration API and exposes the API as native Python methods that return native Python objects.

create_itsm_integration_setting(*data=None, description=None, dypName=None, name=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Creates ITSM Integration setting .

Parameters

- **data** (*object*) – ITSM Integration’s data.
- **description** (*string*) – ITSM Integration’s Description of the setting instance .
- **dypName** (*string*) – ITSM Integration’s It should be ServiceNowConnection .
- **name** (*string*) – ITSM Integration’s Name of the setting instance .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-itsm-integration-setting>

update_itsm_integration_setting(*instance_id, data=None, description=None, dypName=None, name=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates the ITSM Integration setting .

Parameters

- **data** (*object*) – ITSM Integration’s data.
- **description** (*string*) – ITSM Integration’s Description of the setting instance .
- **dypName** (*string*) – ITSM Integration’s It should be ServiceNowConnection .
- **name** (*string*) – ITSM Integration’s Name of the setting instance .
- **instance_id** (*basestring*) – instanceId path parameter. Instance Id of the Integration setting instance .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-itsm-integration-setting>

get_itsm_integration_setting_by_id(*instance_id*, *headers=None*, ***request_parameters*)

Fetches ITSM Integration setting by ID .

Parameters

- **instance_id** (*basestring*) – instanceId path parameter. Instance Id of the Integration setting instance .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-itsm-integration-setting-by-id>

delete_itsm_integration_setting(*instance_id*, *headers=None*, ***request_parameters*)

Deletes the ITSM Integration setting .

Parameters

- **instance_id** (*basestring*) – instanceId path parameter. Instance Id of the Integration setting instance .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-itsm-integration-setting>

get_all_itsm_integration_settings(*headers=None*, ***request_parameters*)

Fetches all ITSM Integration settings .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-all-itsm-integration-settings>

issues

class Issues

Cisco DNA Center Issues API (version: 2.3.5.3).

Wraps the DNA Center Issues API and exposes the API as native Python methods that return native Python objects.

execute_suggested_actions_commands(*entity_type=None, entity_value=None, headers=None, payload=None, active_validation=True, **request_parameters*)

This API triggers the execution of the suggested actions for an issue, given the Issue Id. It will return an execution Id. At the completion of the execution, the output of the commands associated with the suggested actions will be provided. Invoking this API would provide the execution id. Execute the 'Get Business API Execution Details' API with this execution id, to receive the suggested actions commands output. .

Parameters

- **entity_type** (*string*) – Issues's Commands provided as part of the suggested actions for an issue can be executed based on issue id. The value here must be `issue_id` .
- **entity_value** (*string*) – Issues's Contains the actual value for the entity type that has been defined .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

`list`

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!execute-suggested-actions-commands>

get_issue_enrichment_details(*headers=None, **request_parameters*)

Enriches a given network issue context (an issue id or end user's Mac Address) with details about the issue(s), impacted hosts and suggested actions for remediation .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-issue-enrichment-details>

issues(*ai_driven=None, device_id=None, end_time=None, issue_status=None, mac_address=None, priority=None, site_id=None, start_time=None, headers=None, **request_parameters*)

Intent API to get a list of global issues, issues for a specific device, or issue for a specific client device's MAC address. .

Parameters

- **start_time** (*int*) – startTime query parameter. Starting epoch time in milliseconds of query time window .
- **end_time** (*int*) – endTime query parameter. Ending epoch time in milliseconds of query time window .
- **site_id** (*basestring*) – siteId query parameter. Assurance UUID value of the site in the issue content .
- **device_id** (*basestring*) – deviceId query parameter. Assurance UUID value of the device in the issue content .
- **mac_address** (*basestring*) – macAddress query parameter. Client's device MAC address of the issue (format xx:xx:xx:xx:xx:xx) .
- **priority** (*basestring*) – priority query parameter. The issue's priority value (One of P1, P2, P3, or P4)(Use only when macAddress and deviceId are not provided) .
- **ai_driven** (*basestring*) – aiDriven query parameter. The issue's AI driven value (Yes or No)(Use only when macAddress and deviceId are not provided) .
- **issue_status** (*basestring*) – issueStatus query parameter. The issue's status value (One of ACTIVE, IGNORED, RESOLVED) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!issues>

lan_automation**class LanAutomation**

Cisco DNA Center LAN Automation API (version: 2.3.5.3).

Wraps the DNA Center LAN Automation API and exposes the API as native Python methods that return native Python objects.

lan_automation_start(*headers=None, payload=None, active_validation=True, **request_parameters*)

Invoke this API to start LAN Automation for the given site. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!lan-automation-start>

start(*headers=None, payload=None, active_validation=True, **query_parameters*)

Alias for *lan_automation_start*

lan_automation_session_count(*headers=None, **request_parameters*)

Invoke this API to get the total count of LAN Automation sessions. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!lan-automation-session-count>

session_count(*headers=None, **query_parameters*)

Alias for *lan_automation_session_count*

lan_automation_log(*limit=None, offset=None, headers=None, **request_parameters*)

Invoke this API to get the LAN Automation session logs. .

Parameters

- **offset** (*int*) – offset query parameter. Starting index of the LAN Automation session. Minimum value is 1. .
- **limit** (*int*) – limit query parameter. Number of LAN Automation sessions to be retrieved. Limit value can range between 1 to 10. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!lan-automation-log>

log(*limit=None, offset=None, headers=None, **query_parameters*)

Alias for *lan_automation_log*

lan_automation_log_by_id(*id, headers=None, **request_parameters*)

Invoke this API to get the LAN Automation session logs based on the given LAN Automation session id. .

Parameters

- **id** (*basestring*) – id path parameter. LAN Automation session identifier. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!lan-automation-log-by-id>

log_by_id(*id*, *headers=None*, ***query_parameters*)

Alias for *lan_automation_log_by_id*

lan_automation_logs_for_individual_devices(*id*, *serial_number*, *log_level=None*, *headers=None*, ***request_parameters*)

Invoke this API to get the LAN Automation session logs for individual devices based on the given LAN Automation session id and device serial number. .

Parameters

- **id** (*basestring*) – id path parameter. LAN Automation session identifier. .
- **serial_number** (*basestring*) – serialNumber path parameter. Device serial number. .
- **log_level** (*basestring*) – logLevel query parameter. Supported levels are ERROR, INFO, WARNING, TRACE, CONFIG and ALL. Specifying ALL will display device specific logs with the exception of CONFIG logs. In order to view CONFIG logs along with the remaining logs, please leave the query parameter blank. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!lan-automation-logs-for-individual-devices>

lan_automation_active_sessions(*headers=None, **request_parameters*)

Invoke this API to get the LAN Automation active session information .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!lan-automation-active-sessions>

lan_automation_status(*limit=None, offset=None, headers=None, **request_parameters*)

Invoke this API to get the LAN Automation session status. .

Parameters

- **offset** (*int*) – offset query parameter. Starting index of the LAN Automation session. Minimum value is 1. .
- **limit** (*int*) – limit query parameter. Number of LAN Automation sessions to be retrieved. Limit value can range between 1 to 10. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!lan-automation-status>

status(*limit=None, offset=None, headers=None, **query_parameters*)

Alias for *lan_automation_status*

lan_automation_status_by_id(*id, headers=None, **request_parameters*)

Invoke this API to get the LAN Automation session status based on the given Lan Automation session id. .

Parameters

- **id** (*basestring*) – id path parameter. LAN Automation session identifier. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!lan-automation-status-by-id>

status_by_id(*id, headers=None, **query_parameters*)

Alias for *lan_automation_status_by_id*

lan_automation_stop(*id, headers=None, **request_parameters*)

Invoke this API to stop LAN Automation for the given site. .

Parameters

- **id** (*basestring*) – id path parameter. LAN Automation id can be obtained from /dna/intent/api/v1/lan-automation/status. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!lan-automation-stop>

stop(*id*, *headers*=None, ***query_parameters*)

Alias for *lan_automation_stop*

licenses

class Licenses

Cisco DNA Center Licenses API (version: 2.3.5.3).

Wraps the DNA Center Licenses API and exposes the API as native Python methods that return native Python objects.

device_count_details2(*device_type*=None, *dna_level*=None, *registration_status*=None, *smart_account_id*=None, *virtual_account_name*=None, *headers*=None, ***request_parameters*)

Get total number of managed device(s). .

Parameters

- **device_type** (*basestring*) – device_type query parameter. Type of device .
- **registration_status** (*basestring*) – registration_status query parameter. Smart license registration status of device .
- **dna_level** (*basestring*) – dna_level query parameter. Device Cisco DNA License Level .
- **virtual_account_name** (*basestring*) – virtual_account_name query parameter. Virtual account name .
- **smart_account_id** (*basestring*) – smart_account_id query parameter. Smart account id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!device-count-details>

```
device_count_details(device_type=None, dna_level=None, registration_status=None,
                    smart_account_id=None, virtual_account_name=None, headers=None,
                    **request_parameters)
```

```
device_license_summary2(limit, order, page_number, device_type=None, device_uuid=None,
                      dna_level=None, registration_status=None, smart_account_id=None,
                      sort_by=None, virtual_account_name=None, headers=None,
                      **request_parameters)
```

Show license summary of device(s). .

Parameters

- **page_number** (*int*) – page_number query parameter. Page number of response .
- **order** (*basestring*) – order query parameter. Sorting order .
- **sort_by** (*basestring*) – sort_by query parameter. Sort result by field .
- **dna_level** (*basestring*) – dna_level query parameter. Device Cisco DNA license level .
- **device_type** (*basestring*) – device_type query parameter. Type of device .
- **limit** (*int*) – limit query parameter.
- **registration_status** (*basestring*) – registration_status query parameter. Smart license registration status of device .
- **virtual_account_name** (*basestring*) – virtual_account_name query parameter. Name of virtual account .
- **smart_account_id** (*int*) – smart_account_id query parameter. Id of smart account .
- **device_uuid** (*basestring*) – device_uuid query parameter. Id of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!device-license-summary2>

```
device_license_summary(limit, order, page_number, device_type=None, device_uuid=None,
                      dna_level=None, registration_status=None, smart_account_id=None,
                      sort_by=None, virtual_account_name=None, headers=None,
                      **request_parameters)
```

device_license_details2(*device_uuid*, *headers=None*, ***request_parameters*)

Get detailed license information of a device. .

Parameters

- **device_uuid** (*basestring*) – device_uuid path parameter. Id of device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!device-license-details2>

device_license_details(*device_uuid*, *headers=None*, ***request_parameters*)

device_deregistration2(*device_uuids=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Deregister device(s) from CSSM(Cisco Smart Software Manager). .

Parameters

- **device_uuids** (*list*) – Licenses's Comma separated device ids (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!device-deregistration2>

device_registration2(*virtual_account_name*, *device_uuids=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Register device(s) in CSSM(Cisco Smart Software Manager). .

Parameters

- **device_uuids** (*list*) – Licenses’s Comma separated device ids (list of strings).
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of virtual account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!device-registration2>

change_virtual_account2(*smart_account_id*, *virtual_account_name*, *device_uuids=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Transfer device(s) from one virtual account to another within same smart account. .

Parameters

- **device_uuids** (*list*) – Licenses’s Comma separated device ids (list of strings).
- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of target virtual account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!change-virtual-account2>

virtual_account_details2(*smart_account_id*, *headers=None*, ***request_parameters*)

Get virtual account details of a smart account. .

Parameters

- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!virtual-account-details2>

smart_account_details(*headers=None*, ***request_parameters*)

Get detail of all smart accounts. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!smart-account-details>

```
license_term_details2(device_type, smart_account_id, virtual_account_name, headers=None,
                      **request_parameters)
```

Get license term details. .

Parameters

- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of virtual account. Putting “All” will give license term detail for all virtual accounts. .
- **device_type** (*basestring*) – device_type query parameter. Type of device like router, switch, wireless or ise .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!license-term-details2>

```
license_usage_details2(device_type, smart_account_id, virtual_account_name, headers=None,
                      **request_parameters)
```

Get count of purchased and in use Cisco DNA and Network licenses. .

Parameters

- **smart_account_id** (*basestring*) – smart_account_id path parameter. Id of smart account .
- **virtual_account_name** (*basestring*) – virtual_account_name path parameter. Name of virtual account. Putting “All” will give license term detail for all virtual accounts. .

- **device_type** (*basestring*) – device_type query parameter. Type of device like router, switch, wireless or ise .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!license-usage-details2>

network_settings

class NetworkSettings

Cisco DNA Center Network Settings API (version: 2.3.5.3).

Wraps the DNA Center Network Settings API and exposes the API as native Python methods that return native Python objects.

assign_device_credential_to_site(*site_id*, *cliId=None*, *httpRead=None*, *httpWrite=None*, *snmpV2ReadId=None*, *snmpV2WriteId=None*, *snmpV3Id=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Assign Device Credential to a site. .

Parameters

- **cliId** (*string*) – Network Settings's Cli Id.
- **httpRead** (*string*) – Network Settings's Http Read.
- **httpWrite** (*string*) – Network Settings's Http Write.
- **snmpV2ReadId** (*string*) – Network Settings's Snmp V2 Read Id.
- **snmpV2WriteId** (*string*) – Network Settings's Snmp V2 Write Id.
- **snmpV3Id** (*string*) – Network Settings's Snmp V3 Id.
- **site_id** (*basestring*) – siteId path parameter. site id to assign credential. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!assign-device-credential-to-site>

```
assign_credential_to_site(site_id, cliId=None, httpRead=None, httpWrite=None,
                           snmpV2ReadId=None, snmpV2WriteId=None, snmpV3Id=None,
                           headers=None, payload=None, active_validation=True,
                           **request_parameters)
```

```
create_device_credentials(settings=None, headers=None, payload=None, active_validation=True,
                           **request_parameters)
```

API to create device credentials. .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-device-credentials>

update_device_credentials(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to update device credentials. .

Parameters

- **settings** (*object*) – Network Settings’s settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-device-credentials>

get_device_credential_details(*site_id=None, headers=None, **request_parameters*)

API to get device credential details. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Site id to retrieve the credential details associated with the site. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-credential-details>

delete_device_credential(*id*, *headers=None*, ***request_parameters*)

Delete device credential. .

Parameters

- **id** (*basestring*) – id path parameter. global credential id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-device-credential>

get_global_pool(*limit=None*, *offset=None*, *headers=None*, ***request_parameters*)

API to get global pool. .

Parameters

- **offset** (*int*) – offset query parameter. offset/starting row .
- **limit** (*int*) – limit query parameter. No of Global Pools to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-global-pool>

```
update_global_pool(settings=None, headers=None, payload=None, active_validation=True,  
                  **request_parameters)
```

API to update global pool .

Parameters

- **settings** (*object*) – Network Settings’s settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-global-pool>

```
create_global_pool(settings=None, headers=None, payload=None, active_validation=True,  
                  **request_parameters)
```

API to create global pool. .

Parameters

- **settings** (*object*) – Network Settings’s settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-global-pool>

delete_global_ip_pool(*id*, *headers=None*, ***request_parameters*)

API to delete global IP pool. .

Parameters

- **id** (*basestring*) – id path parameter. global pool id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-global-ip-pool>

get_network(*site_id=None*, *headers=None*, ***request_parameters*)

API to get DHCP and DNS center server details. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Site id to get the network settings associated with the site. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-network>

create_network(*site_id*, *settings=None*, *headers=None*, *payload=None*, *active_validation=True*,
***request_parameters*)

API to create a network for DHCP, Syslog, SNMP, NTP, Network AAA, Client and EndPoint AAA, and/or DNS center server settings. .

Parameters

- **settings** (*object*) – Network Settings’s settings.
- **site_id** (*basestring*) – siteId path parameter. Site id to which site details to associate with the network settings. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-network>

update_network(*site_id*, *settings=None*, *headers=None*, *payload=None*, *active_validation=True*,
***request_parameters*)

API to update network settings for DHCP, Syslog, SNMP, NTP, Network AAA, Client and EndPoint AAA, and/or DNS server settings. .

Parameters

- **settings** (*object*) – Network Settings’s settings.
- **site_id** (*basestring*) – siteId path parameter. Site id to update the network settings which is associated with the site .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-network>

get_reserve_ip_subpool(*limit=None, offset=None, site_id=None, headers=None, **request_parameters*)

API to get the ip subpool info. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. site id to get the reserve ip associated with the site .
- **offset** (*int*) – offset query parameter. offset/starting row .
- **limit** (*int*) – limit query parameter. No of Global Pools to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-reserve-ip-subpool>

release_reserve_ip_subpool(*id, headers=None, **request_parameters*)

API to delete the reserved ip subpool .

Parameters

- **id** (*basestring*) – id path parameter. Id of reserve ip subpool to be deleted. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!release-reserve-ip-subpool>

```
reserve_ip_subpool(site_id, ipv4DhcpServers=None, ipv4DnsServers=None, ipv4GateWay=None,
                    ipv4GlobalPool=None, ipv4Prefix=None, ipv4PrefixLength=None, ipv4Subnet=None,
                    ipv4TotalHost=None, ipv6AddressSpace=None, ipv6DhcpServers=None,
                    ipv6DnsServers=None, ipv6GateWay=None, ipv6GlobalPool=None,
                    ipv6Prefix=None, ipv6PrefixLength=None, ipv6Subnet=None, ipv6TotalHost=None,
                    name=None, slaacSupport=None, type=None, headers=None, payload=None,
                    active_validation=True, **request_parameters)
```

API to reserve an ip subpool from the global pool .

Parameters

- **ipv4DhcpServers** (*list*) – Network Settings's IPv4 input for dhcp server ip example: 1.1.1.1 (list of strings).
- **ipv4DnsServers** (*list*) – Network Settings's IPv4 input for dns server ip example: 4.4.4.4 (list of strings).
- **ipv4GateWay** (*string*) – Network Settings's Gateway ip address details, example: 175.175.0.1 .
- **ipv4GlobalPool** (*string*) – Network Settings's IP v4 Global pool address with cidr, example: 175.175.0.0/16 .
- **ipv4Prefix** (*boolean*) – Network Settings's IPv4 prefix value is true, the ip4 prefix length input field is enabled , if it is false ipv4 total Host input is enable .
- **ipv4PrefixLength** (*integer*) – Network Settings's The ipv4 prefix length is required when ipv4prefix value is true. .
- **ipv4Subnet** (*string*) – Network Settings's IPv4 Subnet address, example: 175.175.0.0 .
- **ipv4TotalHost** (*integer*) – Network Settings's IPv4 total host is required when ipv4prefix value is false. .
- **ipv6AddressSpace** (*boolean*) – Network Settings's If the value is false only ipv4 input are required, otherwise both ipv6 and ipv4 are required .
- **ipv6DhcpServers** (*list*) – Network Settings's IPv6 format dhcp server as input example : 2001:db8::1234 (list of strings).
- **ipv6DnsServers** (*list*) – Network Settings's IPv6 format dns server input example: 2001:db8::1234 (list of strings).
- **ipv6GateWay** (*string*) – Network Settings's Gateway ip address details, example: 2001:db8:85a3:0:100::1 .

- **ipv6GlobalPool** (*string*) – Network Settings’s IPv6 Global pool address with cidr this is required when Ipv6AddressSpace value is true, example: 2001:db8:85a3::/64 .
- **ipv6Prefix** (*boolean*) – Network Settings’s Ipv6 prefix value is true, the ip6 prefix length input field is enabled , if it is false ipv6 total Host input is enable .
- **ipv6PrefixLength** (*integer*) – Network Settings’s IPv6 prefix length is required when the ipv6prefix value is true .
- **ipv6Subnet** (*string*) – Network Settings’s IPv6 Subnet address, example :2001:db8:85a3:0:100:: .
- **ipv6TotalHost** (*integer*) – Network Settings’s IPv6 total host is required when ipv6prefix value is false. .
- **name** (*string*) – Network Settings’s Name of the reserve ip sub pool .
- **slaacSupport** (*boolean*) – Network Settings’s Slaac Support.
- **type** (*string*) – Network Settings’s Type of the reserve ip sub pool . Available values are ‘Generic’, ‘LAN’, ‘WAN’, ‘management’ and ‘service’.
- **site_id** (*basestring*) – siteId path parameter. Site id to reserve the ip sub pool. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!reserve-ip-subpool>

```
update_reserve_ip_subpool(id, site_id, ipv4DhcpServers=None, ipv4DnsServers=None,
                           ipv4GateWay=None, ipv6AddressSpace=None, ipv6DhcpServers=None,
                           ipv6DnsServers=None, ipv6GateWay=None, ipv6GlobalPool=None,
                           ipv6Prefix=None, ipv6PrefixLength=None, ipv6Subnet=None,
                           ipv6TotalHost=None, name=None, slaacSupport=None, headers=None,
                           payload=None, active_validation=True, **request_parameters)
```

API to update ip subpool from the global pool .

Parameters

- **ipv4DhcpServers** (*list*) – Network Settings’s IPv4 input for dhcp server ip example: 1.1.1.1 (list of strings).

- **ipv4DnsServers** (*list*) – Network Settings’s IPv4 input for dns server ip example: 4.4.4.4 (list of strings).
- **ipv4GateWay** (*string*) – Network Settings’s Ipv4 Gate Way.
- **ipv6AddressSpace** (*boolean*) – Network Settings’s If the value is false only ipv4 input are required, otherwise both ipv6 and ipv4 are required .
- **ipv6DhcpServers** (*list*) – Network Settings’s IPv6 format dhcp server as input example : 2001:db8::1234 (list of strings).
- **ipv6DnsServers** (*list*) – Network Settings’s IPv6 format dns server input example: 2001:db8::1234 (list of strings).
- **ipv6GateWay** (*string*) – Network Settings’s Gateway ip address details, example: 2001:db8:85a3:0:100::1 .
- **ipv6GlobalPool** (*string*) – Network Settings’s IP v6 Global pool address with cidr this is required when Ipv6AddressSpace value is true, example: 2001:db8:85a3::/64 .
- **ipv6Prefix** (*boolean*) – Network Settings’s IPv6 prefix value is true, the ip6 prefix length input field is enabled , if it is false ipv6 total Host input is enable .
- **ipv6PrefixLength** (*integer*) – Network Settings’s IPv6 prefix length is required when the ipv6prefix value is true .
- **ipv6Subnet** (*string*) – Network Settings’s IPv6 Subnet address, example :2001:db8:85a3:0:100:: .
- **ipv6TotalHost** (*integer*) – Network Settings’s IPv6 total host is required when ipv6prefix value is false. .
- **name** (*string*) – Network Settings’s Name of the reserve ip sub pool .
- **slaacSupport** (*boolean*) – Network Settings’s Slaac Support.
- **site_id** (*basestring*) – siteId path parameter. Site id of site to update sub pool. .
- **id** (*basestring*) – id query parameter. Id of subpool to be associated with the site .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-reserve-ip-subpool>

get_service_provider_details(*headers=None, **request_parameters*)

API to get service provider details (QoS). .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-service-provider-details>

create_sp_profile(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to create Service Provider Profile(QOS). .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-sp-profile>

update_sp_profile(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to update Service Provider Profile (QoS). .

Parameters

- **settings** (*object*) – Network Settings’s settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-sp-profile>

delete_sp_profile(*sp_profile_name, headers=None, **request_parameters*)

API to delete Service Provider Profile (QoS). .

Parameters

- **sp_profile_name** (*basestring*) – spProfileName path parameter. sp profile name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-sp-profile>

```
assign_device_credential_to_site_v2(site_id, cliId=None, httpRead=None, httpWrite=None,
                                     snmpV2ReadId=None, snmpV2WriteId=None,
                                     snmpV3Id=None, headers=None, payload=None,
                                     active_validation=True, **request_parameters)
```

API to assign Device Credential to a site. .

Parameters

- **cliId** (*string*) – Network Settings’s CLI Credential Id .
- **httpRead** (*string*) – Network Settings’s HTTP(S) Read Credential Id .
- **httpWrite** (*string*) – Network Settings’s HTTP(S) Write Credential Id .
- **snmpV2ReadId** (*string*) – Network Settings’s SNMPv2c Read Credential Id .
- **snmpV2WriteId** (*string*) – Network Settings’s SNMPv2c Write Credential Id .
- **snmpV3Id** (*string*) – Network Settings’s SNMPv3 Credential Id .
- **site_id** (*basestring*) – siteId path parameter. Site Id to assign credential. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!assign-device-credential-to-site-v2>

```
get_network_v2(site_id=None, headers=None, **request_parameters)
```

API to get SNMP, NTP, Network AAA, Client and Endpoint AAA, and/or DNS center server settings. .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Site Id to get the network settings associated with the site. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-network-v2>

create_network_v2(*site_id*, *settings=None*, *headers=None*, *payload=None*, *active_validation=True*,
***request_parameters*)

API to create network settings for DHCP, Syslog, SNMP, NTP, Network AAA, Client and Endpoint AAA, and/or DNS center server settings. .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **site_id** (*basestring*) – siteId path parameter. Site Id to which site details to associate with the network settings. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!create-network-v2>

update_network_v2(*site_id*, *settings=None*, *headers=None*, *payload=None*, *active_validation=True*,
***request_parameters*)

API to update network settings for DHCP, Syslog, SNMP, NTP, Network AAA, Client and Endpoint AAA, and/or DNS center server settings. .

Parameters

- **settings** (*object*) – Network Settings's settings.

- **site_id** (*basestring*) – siteId path parameter. Site Id to update the network settings which is associated with the site .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-network-v2>

```
create_sp_profile_v2(settings=None, headers=None, payload=None, active_validation=True,  
                    **request_parameters)
```

API to create Service Provider Profile(QOS). .

Parameters

- **settings** (*object*) – Network Settings's settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-sp-profile-v2>

update_sp_profile_v2(*settings=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to update Service Provider Profile (QoS). .

Parameters

- **settings** (*object*) – Network Settings’s settings.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-sp-profile-v2>

get_service_provider_details_v2(*headers=None, **request_parameters*)

API to get Service Provider details (QoS). .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-service-provider-details-v2>

delete_sp_profile_v2(*sp_profile_name*, *headers=None*, ***request_parameters*)

API to delete Service Provider Profile (QoS). .

Parameters

- **sp_profile_name** (*basestring*) – spProfileName path parameter. sp profile name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-sp-profile-v2>

path_trace

class PathTrace

Cisco DNA Center Path Trace API (version: 2.3.5.3).

Wraps the DNA Center Path Trace API and exposes the API as native Python methods that return native Python objects.

retrives_all_previous_pathtraces_summary(*dest_ip=None*, *dest_port=None*, *gt_create_time=None*, *last_update_time=None*, *limit=None*, *lt_create_time=None*, *offset=None*, *order=None*, *periodic_refresh=None*, *protocol=None*, *sort_by=None*, *source_ip=None*, *source_port=None*, *status=None*, *task_id=None*, *headers=None*, ***request_parameters*)

Returns a summary of all flow analyses stored. Results can be filtered by specified parameters. .

Parameters

- **periodic_refresh** (*bool*) – periodicRefresh query parameter. Is analysis periodically refreshed? .
- **source_ip** (*basestring*) – sourceIP query parameter. Source IP address .
- **dest_ip** (*basestring*) – destIP query parameter. Destination IP adress .
- **source_port** (*basestring*) – sourcePort query parameter. Source port .
- **dest_port** (*basestring*) – destPort query parameter. Destination port .
- **gt_create_time** (*basestring*) – gtCreateTime query parameter. Analyses requested after this time .

- **lt_create_time** (*basestring*) – ltCreateTime query parameter. Analyses requested before this time .
- **protocol** (*basestring*) – protocol query parameter.
- **status** (*basestring*) – status query parameter.
- **task_id** (*basestring*) – taskId query parameter. Task ID .
- **last_update_time** (*basestring*) – lastUpdateTime query parameter. Last update time .
- **limit** (*int*) – limit query parameter. Number of resources returned .
- **offset** (*int*) – offset query parameter. Start index of resources returned (1-based) .
- **order** (*basestring*) – order query parameter. Order by this field .
- **sort_by** (*basestring*) – sortBy query parameter. Sort by this field .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!retrives-all-previous-pathtraces-summary>

```
initiate_a_new_pathtrace(controlPath=None, destIP=None, destPort=None, inclusions=None,  
                           periodicRefresh=None, protocol=None, sourceIP=None, sourcePort=None,  
                           headers=None, payload=None, active_validation=True,  
                           **request_parameters)
```

Initiates a new flow analysis with periodic refresh and stat collection options. Returns a request id and a task id to get results and follow progress. .

Parameters

- **controlPath** (*boolean*) – Path Trace's Control path tracing .
- **destIP** (*string*) – Path Trace's Destination IP address .
- **destPort** (*string*) – Path Trace's Destination Port .
- **inclusions** (*list*) – Path Trace's Subset of {INTERFACE-STATS, QOS-STATS, DEVICE-STATS, PERFORMANCE-STATS, ACL-TRACE} (list of strings).
- **periodicRefresh** (*boolean*) – Path Trace's Periodic refresh of path for every 30 sec .
- **protocol** (*string*) – Path Trace's Protocol .
- **sourceIP** (*string*) – Path Trace's Source IP address .

- **sourcePort** (*string*) – Path Trace’s Source Port .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!initiate-a-new-pathtrace>

retrieves_previous_pathtrace(*flow_analysis_id*, *headers=None*, ***request_parameters*)

Returns result of a previously requested flow analysis by its Flow Analysis id .

Parameters

- **flow_analysis_id** (*basestring*) – flowAnalysisId path parameter. Flow analysis request id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!retrieves-previous-pathtrace>

deletes_pathtrace_by_id(*flow_analysis_id*, *headers=None*, ***request_parameters*)

Deletes a flow analysis request by its id .

Parameters

- **flow_analysis_id** (*basestring*) – flowAnalysisId path parameter. Flow analysis request id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/deletes-pathtrace-by-id>

platform

class Platform

Cisco DNA Center Platform API (version: 2.3.5.3).

Wraps the DNA Center Platform API and exposes the API as native Python methods that return native Python objects.

cisco_dna_center_packages_summary(*headers=None, **request_parameters*)

Provides information such as name, version of packages installed on the DNA center. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/cisco-dna-center-packages-summary>

release_summary(*headers=None, **request_parameters*)

Provides information such as API version, mandatory core packages for installation or upgrade, optional packages, Cisco DNA Center name and version, supported direct updates, and tenant ID. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!release-summary>

nodes_configuration_summary(*headers=None, **request_parameters*)

Provides details about the current Cisco DNA Center node configuration, such as API version, node name, NTP server, intracluster link, LACP mode, network static routes, DNS server, subnet mask, host IP, default gateway, and interface information. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!nodes-configuration-summary>

reports

class Reports

Cisco DNA Center Reports API (version: 2.3.5.3).

Wraps the DNA Center Reports API and exposes the API as native Python methods that return native Python objects.

create_or_schedule_a_report(*deliveries=None, name=None, schedule=None, tags=None, view=None, viewGroupId=None, viewGroupVersion=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Create/Schedule a report configuration. Use “Get view details for a given view group & view” API to get the metadata required to configure a report. .

Parameters

- **deliveries** (*list*) – Reports’s Array of available delivery channels (list of objects).
- **name** (*string*) – Reports’s report name .
- **schedule** (*object*) – Reports’s schedule.
- **tags** (*list*) – Reports’s array of tags for report (list of strings).
- **view** (*object*) – Reports’s view.
- **viewGroupId** (*string*) – Reports’s viewGroupId of the viewgroup for the report .
- **viewGroupVersion** (*string*) – Reports’s version of viewgroup for the report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-or-schedule-a-report>

get_list_of_scheduled_reports(*view_group_id=None, view_id=None, headers=None, **request_parameters*)

Get list of scheduled report configurations. .

Parameters

- **view_group_id** (*basestring*) – viewGroupId query parameter. viewGroupId of view-group for report .
- **view_id** (*basestring*) – viewId query parameter. viewId of view for report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-list-of-scheduled-reports>

get_a_scheduled_report(*report_id*, *headers=None*, ***request_parameters*)

Get scheduled report configuration by reportId .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-a-scheduled-report>

delete_a_scheduled_report(*report_id*, *headers=None*, ***request_parameters*)

Delete a scheduled report configuration. Deletes the report executions also. .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-a-scheduled-report>

get_all_execution_details_for_a_given_report(*report_id*, *headers=None*, ***request_parameters*)

Get details of all executions for a given report .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-all-execution-details-for-a-given-report>

download_report_content(*execution_id*, *report_id*, *dirpath=None*, *save_file=None*, *filename=None*, *headers=None*, ***request_parameters*)

Returns report content. Save the response to a file by converting the response data as a blob and setting the file format available from content-disposition response header. .

Parameters

- **report_id** (*basestring*) – reportId path parameter. reportId of report .

- **execution_id** (*basestring*) – executionId path parameter. executionId of report execution .
- **dirpath** (*basestring*) – Directory absolute path. Defaults to os.getcwd().
- **save_file** (*bool*) – Enable or disable automatic file creation of raw response.
- **filename** (*basestring*) – The filename used to save the download file.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

The DownloadResponse wrapper. Wraps the urllib3.response.HTTPResponse. For more information check the [urllib3 documentation](#)

Return type

DownloadResponse

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.
- **DownloadFailure** – If was not able to download the raw
- **response to a file.** –

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/download-report-content>

get_all_view_groups(*headers=None, **request_parameters*)

Gives a list of summary of all view groups. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/get-all-view-groups>

get_views_for_a_given_view_group(*view_group_id*, *headers=None*, ***request_parameters*)

Gives a list of summary of all views in a viewgroup. Use “Get all view groups” API to get the viewGroupIds (required as a query param for this API) for available viewgroups. .

Parameters

- **view_group_id** (*basestring*) – viewGroupId path parameter. viewGroupId of view-group. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-views-for-a-given-view-group>

get_view_details_for_a_given_view_group_and_view(*view_group_id*, *view_id*, *headers=None*, ***request_parameters*)

Gives complete information of the view that is required to configure a report. Use “Get views for a given view group” API to get the viewIds (required as a query param for this API) for available views. .

Parameters

- **view_group_id** (*basestring*) – viewGroupId path parameter. viewGroupId of view-group .
- **view_id** (*basestring*) – viewId path parameter. view id of view .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-view-details-for-a-given-view-group-and-view>

sda**class Sda**

Cisco DNA Center SDA API (version: 2.3.5.3).

Wraps the DNA Center SDA API and exposes the API as native Python methods that return native Python objects.

get_default_authentication_profile(*site_name_hierarchy*, *authenticate_template_name=None*,
headers=None, ***request_parameters*)

Get default authentication profile from SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **authenticate_template_name** (*basestring*) – authenticateTemplateName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-default-authentication-profile>

add_default_authentication_profile(*headers=None*, *payload=None*, *active_validation=True*,
***request_parameters*)

Add default authentication template in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-default-authentication-profile>

```
update_default_authentication_profile(headers=None, payload=None, active_validation=True,  
                                     **request_parameters)
```

Update default authentication profile in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-default-authentication-profile>

```
delete_default_authentication_profile(site_name_hierarchy, headers=None,  
                                     **request_parameters)
```

Delete default authentication profile in SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-default-authentication-profile>

adds_border_device(*headers=None, payload=None, active_validation=True, **request_parameters*)

Add border device in SDA Fabric .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!adds-border-device>

gets_border_device_detail(*device_management_ip_address, headers=None, **request_parameters*)

Get border device detail from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!gets-border-device-detail>

deletes_border_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Delete border device from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – `deviceManagementIpAddress` query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!deletes-border-device>

delete_control_plane_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Delete control plane device in SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – `deviceManagementIpAddress` query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-control-plane-device>

get_control_plane_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Get control plane device from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – `deviceManagementIpAddress` query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-control-plane-device>

add_control_plane_device(*deviceManagementIpAddress=None*, *routeDistributionProtocol=None*, *siteNameHierarchy=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add control plane device in SDA Fabric .

Parameters

- **deviceManagementIpAddress** (*string*) – SDA's Management Ip Address of the Device which is provisioned successfully .
- **routeDistributionProtocol** (*string*) – SDA's Route Distribution Protocol for Control Plane Device. Allowed values are "LISP_BGP" or "LISP_PUB_SUB". Default value is "LISP_BGP" .

- **siteNameHierarchy** (*string*) – SDA’s siteNameHierarchy of the Provisioned Device(site should be part of Fabric Site) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-control-plane-device>

get_device_info(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Get device info from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-info>

```
get_device_role_in_sda_fabric(device_management_ip_address, headers=None,
                              **request_parameters)
```

Get device role in SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter. Device Management IP Address .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-role-in-sda-fabric>

```
add_edge_device(deviceManagementIpAddress=None, siteNameHierarchy=None, headers=None,
                payload=None, active_validation=True, **request_parameters)
```

Add edge device in SDA Fabric .

Parameters

- **deviceManagementIpAddress** (*string*) – SDA's Management Ip Address of the Device which is provisioned successfully .
- **siteNameHierarchy** (*string*) – SDA's siteNameHierarchy of the Provisioned Device(site should be part of Fabric Site) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-edge-device>

delete_edge_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Delete edge device from SDA Fabric. .

Parameters

- **device_management_ip_address** (*basestring*) – `deviceManagementIpAddress` query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-edge-device>

get_edge_device(*device_management_ip_address*, *headers=None*, ***request_parameters*)

Get edge device from SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – `deviceManagementIpAddress` query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-edge-device>

get_site(*site_name_hierarchy*, *headers=None*, ***request_parameters*)

Get Site info from SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. Site Name Hierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-site>

delete_site(*site_name_hierarchy*, *headers=None*, ***request_parameters*)

Delete Site from SDA Fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. Site Name Hierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-site>

add_site(*fabricName=None, fabricType=None, siteNameHierarchy=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Add Site in SDA Fabric .

Parameters

- **fabricName** (*string*) – SDA’s Warning Starting DNA Center 2.2.3.5 release, this field has been deprecated. SD-Access Fabric does not need it anymore. It will be removed in future DNA Center releases. .
- **fabricType** (*string*) – SDA’s Type of SD-Access Fabric. Allowed values are “FABRIC_SITE” or “FABRIC_ZONE”. Default value is “FABRIC_SITE”. .
- **siteNameHierarchy** (*string*) – SDA’s Existing site name hierarchy available at global level. For Example “Global/Chicago/Building21/Floor1” .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-site>

add_port_assignment_for_access_point(*authenticateTemplateName=None, dataIpAddressPoolName=None, deviceManagementIpAddress=None, interfaceDescription=None, interfaceName=None, siteNameHierarchy=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Add Port assignment for access point in SDA Fabric .

Parameters

- **authenticateTemplateName** (*string*) – SDA’s Authenticate TemplateName associated to Fabric Site . Available values are ‘No Authentication’, ‘Open Authentication’, ‘Closed Authentication ‘ and ‘Low Impact ‘.
- **dataIpAddressPoolName** (*string*) – SDA’s Ip Pool Name, that is assigned to INFRA_VN .

- **deviceManagementIpAddress** (*string*) – SDA’s Management Ip Address of the edge device .
- **interfaceDescription** (*string*) – SDA’s Details or note of interface port assignment .
- **interfaceName** (*string*) – SDA’s Interface Name of the edge device .
- **siteNameHierarchy** (*string*) – SDA’s Path of sda Fabric Site .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-port-assignment-for-access-point>

delete_port_assignment_for_access_point (*device_management_ip_address*, *interface_name*, *headers=None*, ***request_parameters*)

Delete Port assignment for access point in SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **interface_name** (*basestring*) – interfaceName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-port-assignment-for-access-point>

get_port_assignment_for_access_point(*device_management_ip_address*, *interface_name*,
headers=None, ***request_parameters*)

Get Port assignment for access point in SDA Fabric .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **interface_name** (*basestring*) – interfaceName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-port-assignment-for-access-point>

delete_port_assignment_for_user_device(*device_management_ip_address*, *interface_name*,
headers=None, ***request_parameters*)

Delete Port assignment for user device in SDA Fabric. .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **interface_name** (*basestring*) – interfaceName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-port-assignment-for-user-device>

```
add_port_assignment_for_user_device(authenticateTemplateName=None,
                                   dataIpAddressPoolName=None,
                                   deviceManagementIpAddress=None,
                                   interfaceDescription=None, interfaceName=None,
                                   interfaceNames=None, scalableGroupName=None,
                                   siteNameHierarchy=None, voiceIpAddressPoolName=None,
                                   headers=None, payload=None, active_validation=True,
                                   **request_parameters)
```

Add Port assignment for user device in SDA Fabric. .

Parameters

- **authenticateTemplateName** (*string*) – SDA's Authenticate TemplateName associated with siteNameHierarchy . Available values are 'Open Authentication', 'Closed Authentication', 'Low Impact' and 'No Authentication'.
- **dataIpAddressPoolName** (*string*) – SDA's Ip Pool Name, that is assigned to virtual network with traffic type as DATA(can't be empty if voiceIpAddressPoolName is empty) .
- **deviceManagementIpAddress** (*string*) – SDA's Management Ip Address of the Edge Node Device. .
- **interfaceDescription** (*string*) – SDA's User defined text message for port assignment .
- **interfaceName** (*string*) – SDA's Interface Name on the Edge Node Device. .
- **interfaceNames** (*list*) – SDA's List of Interface Names on the Edge Node Device. E.g.[“GigabitEthernet1/0/3”,“GigabitEthernet1/0/4”] (list of strings).
- **scalableGroupName** (*string*) – SDA's Scalable Group name associated with VN .
- **siteNameHierarchy** (*string*) – SDA's Complete Path of SD-Access Fabric Site. .
- **voiceIpAddressPoolName** (*string*) – SDA's Ip Pool Name, that is assigned to virtual network with traffic type as VOICE(can't be empty if dataIpAddressPoolName is empty) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-port-assignment-for-user-device>

```
get_port_assignment_for_user_device(device_management_ip_address, interface_name,  
                                   headers=None, **request_parameters)
```

Get Port assignment for user device in SDA Fabric. .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **interface_name** (*basestring*) – interfaceName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-port-assignment-for-user-device>

```
add_multicast_in_sda_fabric(multicastMethod=None, multicastType=None, multicastVnInfo=None,  
                             siteNameHierarchy=None, headers=None, payload=None,  
                             active_validation=True, **request_parameters)
```

Add multicast in SDA fabric .

Parameters

- **multicastMethod** (*string*) – SDA's Multicast Method . Available values are 'native_multicast'.
- **multicastType** (*string*) – SDA's Multicast Type . Available values are 'ssm', 'asm_with_internal_rp' and 'asm_with_external_rp'.
- **multicastVnInfo** (*list*) – SDA's multicastVnInfo (list of objects).
- **siteNameHierarchy** (*string*) – SDA's Full path of sda Fabric Site .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.

- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-multicast-in-sda-fabric>

```
get_multicast_details_from_sda_fabric(site_name_hierarchy, headers=None,
                                     **request_parameters)
```

Get multicast details from SDA fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. fabric site name hierarchy .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-multicast-details-from-sda-fabric>

```
delete_multicast_from_sda_fabric(site_name_hierarchy, headers=None, **request_parameters)
```

Delete multicast from SDA fabric .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-multicast-from-sda-fabric>

delete_provisioned_wired_device(*device_management_ip_address*, *headers=None*,
***request_parameters*)

Delete provisioned Wired Device .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter. Valid IP address of the device currently provisioned in a fabric site .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-provisioned-wired-device>

re_provision_wired_device(*deviceManagementIpAddress=None*, *siteNameHierarchy=None*,
headers=None, *payload=None*, *active_validation=True*,
***request_parameters*)

Re-Provision Wired Device .

Parameters

- **deviceManagementIpAddress** (*string*) – SDA's Management Ip Address of the device to be re-provisioned .

- **siteNameHierarchy** (*string*) – SDA's siteNameHierarchy of the provisioned device .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!re-provision-wired-device>

provision_wired_device(*deviceManagementIpAddress=None, siteNameHierarchy=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Provision Wired Device .

Parameters

- **deviceManagementIpAddress** (*string*) – SDA's Management Ip Address of the device to be provisioned .
- **siteNameHierarchy** (*string*) – SDA's Site Name Hierarchy for device location(only building / floor level) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!provision-wired-device>

```
get_provisioned_wired_device(device_management_ip_address, headers=None,  
                             **request_parameters)
```

Get Provisioned Wired Device .

Parameters

- **device_management_ip_address** (*basestring*) – deviceManagementIpAddress query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-provisioned-wired-device>

```
delete_transit_peer_network(transit_peer_network_name, headers=None, **request_parameters)
```

Delete Transit Peer Network from SD-Access .

Parameters

- **transit_peer_network_name** (*basestring*) – transitPeerNetworkName query parameter. Transit Peer Network Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-transit-peer-network>

get_transit_peer_network_info(*transit_peer_network_name*, *headers=None*, ***request_parameters*)

Get Transit Peer Network Info from SD-Access .

Parameters

- **transit_peer_network_name** (*basestring*) – transitPeerNetworkName query parameter. Transit or Peer Network Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-transit-peer-network-info>

add_transit_peer_network(*ipTransitSettings=None*, *sdaTransitSettings=None*, *transitPeerNetworkName=None*, *transitPeerNetworkType=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Add Transit Peer Network in SD-Access .

Parameters

- **ipTransitSettings** (*object*) – SDA's ipTransitSettings.
- **sdaTransitSettings** (*object*) – SDA's sdaTransitSettings.
- **transitPeerNetworkName** (*string*) – SDA's Transit Peer Network Name .
- **transitPeerNetworkType** (*string*) – SDA's Transit Peer Network Type . Available values are 'ip_transit', 'sda_transit_with_lisp_bgp' and 'sda_transit_with_pub_sub'.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!add-transit-peer-network>**delete_vn**(*site_name_hierarchy*, *virtual_network_name*, *headers=None*, ***request_parameters*)

Delete virtual network (VN) from SDA Fabric .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!delete-vn>**get_vn**(*site_name_hierarchy*, *virtual_network_name*, *headers=None*, ***request_parameters*)

Get virtual network (VN) from SDA Fabric .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-vn>

add_vn(*siteNameHierarchy=None, virtualNetworkName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Add virtual network (VN) in SDA Fabric .

Parameters

- **siteNameHierarchy** (*string*) – SDA's Path of sda Fabric Site .
- **virtualNetworkName** (*string*) – SDA's Virtual Network Name, that is created at Global level .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!add-vn>

get_virtual_network_summary(*site_name_hierarchy, headers=None, **request_parameters*)

Get Virtual Network Summary .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter. Complete fabric siteNameHierarchy Path .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-virtual-network-summary>

get_ip_pool_from_sda_virtual_network(*ip_pool_name*, *site_name_hierarchy*, *virtual_network_name*,
headers=None, ***request_parameters*)

Get IP Pool from SDA Virtual Network .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **ip_pool_name** (*basestring*) – ipPoolName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-ip-pool-from-sda-virtual-network>

delete_ip_pool_from_sda_virtual_network(*ip_pool_name*, *site_name_hierarchy*,
virtual_network_name, *headers=None*,
***request_parameters*)

Delete IP Pool from SDA Virtual Network .

Parameters

- **site_name_hierarchy** (*basestring*) – siteNameHierarchy query parameter.
- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.

- **ip_pool_name** (*basestring*) – ipPoolName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-ip-pool-from-sda-virtual-network>

```
add_ip_pool_in_sda_virtual_network(autoGenerateVlanName=None, ipPoolName=None,
                                   isBridgeModeVm=None, isCommonPool=None,
                                   isIpDirectedBroadcast=None, isL2FloodingEnabled=None,
                                   isLayer2Only=None, isThisCriticalPool=None,
                                   isWirelessPool=None, poolType=None,
                                   scalableGroupName=None, siteNameHierarchy=None,
                                   trafficType=None, virtualNetworkName=None, vlanId=None,
                                   vlanName=None, headers=None, payload=None,
                                   active_validation=True, **request_parameters)
```

Add IP Pool in SDA Virtual Network .

Parameters

- **autoGenerateVlanName** (*boolean*) – SDA's It will auto generate vlanName, if vlanName is empty(applicable for L3 and INFRA_VN) .
- **ipPoolName** (*string*) – SDA's Ip Pool Name, that is reserved to Fabric Site for (applicable for L3 and INFRA_VN) .
- **isBridgeModeVm** (*boolean*) – SDA's Bridge Mode Vm enablement flag (applicable for L3 and L2 and default value is False) .
- **isCommonPool** (*boolean*) – SDA's Common Pool enablement flag(applicable for L3 and L2 and default value is False) .
- **isIpDirectedBroadcast** (*boolean*) – SDA's Ip Directed Broadcast enablement flag(applicable for L3 and default value is False) .
- **isL2FloodingEnabled** (*boolean*) – SDA's Layer2 flooding enablement flag(applicable for L3 , L2 and always true for L2 and default value is False) .
- **isLayer2Only** (*boolean*) – SDA's Layer2 Only enablement flag and default value is False .
- **isThisCriticalPool** (*boolean*) – SDA's Critical pool enablement flag(applicable for L3 and default value is False) .

- **isWirelessPool** (*boolean*) – SDA's Wireless Pool enablement flag(applicable for L3 and L2 and default value is False) .
- **poolType** (*string*) – SDA's Pool Type (applicable for INFRA_VN) . Available values are 'AP' and 'Extended'.
- **scalableGroupName** (*string*) – SDA's Scalable Group Name(applicable for L3) .
- **siteNameHierarchy** (*string*) – SDA's Path of sda Fabric Site .
- **trafficType** (*string*) – SDA's Traffic type(applicable for L3 and L2) . Available values are 'Data' and 'Voice'.
- **virtualNetworkName** (*string*) – SDA's Virtual Network Name, that is associated to Fabric Site .
- **vlanId** (*string*) – SDA's vlan Id(applicable for L3 , L2 and INFRA_VN) .
- **vlanName** (*string*) – SDA's Vlan name represent the segment name, if empty, vlanName would be auto generated by API .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-ip-pool-in-sda-virtual-network>

```
add_virtual_network_with_scalable_groups(isGuestVirtualNetwork=None,  
                                         scalableGroupNames=None, vManageVpnId=None,  
                                         virtualNetworkName=None, headers=None,  
                                         payload=None, active_validation=True,  
                                         **request_parameters)
```

Add virtual network with scalable groups at global level .

Parameters

- **isGuestVirtualNetwork** (*boolean*) – SDA's Guest Virtual Network enablement flag, default value is False. .
- **scalableGroupNames** (*list*) – SDA's Scalable Group to be associated to virtual network (list of strings).
- **vManageVpnId** (*string*) – SDA's vManage vpn id for SD-WAN .

- **virtualNetworkName** (*string*) – SDA's Virtual Network Name to be assigned at global level .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-virtual-network-with-scalable-groups>

delete_virtual_network_with_scalable_groups(*virtual_network_name*, *headers=None*,
***request_parameters*)

Delete virtual network with scalable groups .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-virtual-network-with-scalable-groups>

```
get_virtual_network_with_scalable_groups(virtual_network_name, headers=None,  
                                         **request_parameters)
```

Get virtual network with scalable groups .

Parameters

- **virtual_network_name** (*basestring*) – virtualNetworkName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-virtual-network-with-scalable-groups>

```
update_virtual_network_with_scalable_groups(isGuestVirtualNetwork=None,  
                                           scalableGroupNames=None, vManageVpnId=None,  
                                           virtualNetworkName=None, headers=None,  
                                           payload=None, active_validation=True,  
                                           **request_parameters)
```

Update virtual network with scalable groups .

Parameters

- **isGuestVirtualNetwork** (*boolean*) – SDA's Indicates whether to set this as guest virtual network or not, default value is False. .
- **scalableGroupNames** (*list*) – SDA's Scalable Group Name to be associated to virtual network (list of strings).
- **vManageVpnId** (*string*) – SDA's vManage vpn id for SD-WAN .
- **virtualNetworkName** (*string*) – SDA's Virtual Network Name to be assigned global level .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!update-virtual-network-with-scalable-groups>**security_advisories****class SecurityAdvisories**

Cisco DNA Center Security Advisories API (version: 2.3.5.3).

Wraps the DNA Center Security Advisories API and exposes the API as native Python methods that return native Python objects.

get_advisories_list(*headers=None, **request_parameters*)

Retrieves list of advisories on the network .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-advisories-list>

get_advisories_summary(*headers=None, **request_parameters*)

Retrieves summary of advisories on the network. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-advisories-summary>

get_devices_per_advisory(*advisory_id*, *headers=None*, ***request_parameters*)

Retrieves list of devices for an advisory .

Parameters

- **advisory_id** (*basestring*) – advisoryId path parameter. Advisory ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-devices-per-advisory>

get_advisory_ids_per_device(*device_id*, *headers=None*, ***request_parameters*)

Retrieves list of advisory IDs for a device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device instance UUID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-advisory-ids-per-device>**get_advisories_per_device**(*device_id*, *headers=None*, ***request_parameters*)

Retrieves list of advisories for a device .

Parameters

- **device_id** (*basestring*) – deviceId path parameter. Device instance UUID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-advisories-per-device>**sensors****class Sensors**

Cisco DNA Center Sensors API (version: 2.3.5.3).

Wraps the DNA Center Sensors API and exposes the API as native Python methods that return native Python objects.

edit_sensor_test_template(*locationInfoList=None*, *schedule=None*, *templateName=None*,
headers=None, *payload=None*, *active_validation=True*,
***request_parameters*)

Intent API to deploy, schedule, or edit and existing SENSOR test template .

Parameters

- **locationInfoList** (*list*) – Sensors's locationInfoList (list of objects).
- **schedule** (*object*) – Sensors's schedule.

- **templateName** (*string*) – Sensors’s Template Name.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!edit-sensor-test-template>

```
create_sensor_test_template(apCoverage=None, connection=None, modelVersion=None, name=None,
                             ssids=None, headers=None, payload=None, active_validation=True,
                             **request_parameters)
```

Intent API to create a SENSOR test template with a new SSID, existing SSID, or both new and existing SSID .

Parameters

- **apCoverage** (*list*) – Sensors’s apCoverage (list of objects).
- **connection** (*string*) – Sensors’s Connection.
- **modelVersion** (*integer*) – Sensors’s Model Version.
- **name** (*string*) – Sensors’s Name.
- **ssids** (*list*) – Sensors’s ssids (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-sensor-test-template>

delete_sensor_test(*template_name=None, headers=None, **request_parameters*)

Intent API to delete an existing SENSOR test template .

Parameters

- **template_name** (*basestring*) – templateName query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-sensor-test>

sensors(*site_id=None, headers=None, **request_parameters*)

Intent API to get a list of SENSOR devices .

Parameters

- **site_id** (*basestring*) – siteId query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!sensors>

run_now_sensor_test(*templateName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Intent API to run a deployed SENSOR test .

Parameters

- **templateName** (*string*) – Sensors’s Template Name.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!run-now-sensor-test>

duplicate_sensor_test_template(*newTemplateName=None, templateName=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Intent API to duplicate an existing SENSOR test template .

Parameters

- **newTemplateName** (*string*) – Sensors’s New Template Name.
- **templateName** (*string*) – Sensors’s Template Name.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!duplicate-sensor-test-template>

site_design**class SiteDesign**

Cisco DNA Center Site Design API (version: 2.3.5.3).

Wraps the DNA Center Site Design API and exposes the API as native Python methods that return native Python objects.

provision_nfv(*provisioning=None, siteProfile=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Design and Provision single/multi NFV device with given site/area/building/floor . .

Parameters

- **provisioning** (*list*) – Site Design’s provisioning (list of objects).
- **siteProfile** (*list*) – Site Design’s siteProfile (list of objects).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!provision-nfv>

get_device_details_by_ip(*device_ip, headers=None, **request_parameters*)

Returns provisioning device information for the specified IP address. .

Parameters

- **device_ip** (*basestring*) – deviceIp query parameter. Device to which the provisioning detail has to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/get-device-details-by-ip>

associate(*network_profile_id, site_id, headers=None, **request_parameters*)

Associate Site to a Network Profile .

Parameters

- **network_profile_id** (*basestring*) – networkProfileId path parameter. Network-Profile Id to be associated .
- **site_id** (*basestring*) – siteId path parameter. Site Id to be associated .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/associate>

disassociate(*network_profile_id, site_id, headers=None, **request_parameters*)

Disassociate a Site from a Network Profile .

Parameters

- **network_profile_id** (*basestring*) – networkProfileId path parameter. Network-Profile Id to be associated .
- **site_id** (*basestring*) – siteId path parameter. Site Id to be associated .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!disassociate>

nfv_provisioning_detail (*device_ip=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Checks the provisioning detail of an ENCS device including log information. .

Parameters

- **device_ip** (*string*) – Site Design's Device Ip.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!nfv-provisioning-detail>

```
create_nfv_profile(device=None, profileName=None, headers=None, payload=None,  
                    active_validation=True, **request_parameters)
```

API to create network profile for different NFV topologies .

Parameters

- **device** (*list*) – Site Design’s device (list of objects).
- **profileName** (*string*) – Site Design’s Name of the profile to create NFV profile .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/create-nfv-profile>

```
update_nfv_profile(id, device=None, name=None, headers=None, payload=None,  
                    active_validation=True, **request_parameters)
```

API to update a NFV Network profile .

Parameters

- **device** (*list*) – Site Design’s device (list of objects).
- **id** (*basestring*) – id path parameter. Id of the NFV profile to be updated .
- **name** (*basestring*) – name query parameter. Name of the profile to be updated .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-nfv-profile>

get_nfv_profile(*id*, *limit=None*, *name=None*, *offset=None*, *headers=None*, ***request_parameters*)

API to get NFV network profile. .

Parameters

- **id** (*basestring*) – id path parameter. ID of network profile to retrieve. .
- **offset** (*int*) – offset query parameter. offset/starting row .
- **limit** (*int*) – limit query parameter. Number of profile to be retrieved .
- **name** (*basestring*) – name query parameter. Name of network profile to be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-nfv-profile>

delete_nfv_profile(*id*, *name=None*, *headers=None*, ***request_parameters*)

API to delete nfvd network profile. .

Parameters

- **id** (*basestring*) – id path parameter. Id of nfvd network profile to delete. .
- **name** (*basestring*) – name query parameter. Name of nfvd network profile to delete. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!delete-nfv-profile>**sites****class Sites**

Cisco DNA Center Sites API (version: 2.3.5.3).

Wraps the DNA Center Sites API and exposes the API as native Python methods that return native Python objects.

assign_devices_to_site(*site_id*, *device=None*, *headers=None*, *payload=None*, *active_validation=True*,
***request_parameters*)

Assigns unassigned devices to a site. This API does not move assigned devices to other sites. .

Parameters

- **device** (*list*) – Sites's device (list of objects).
- **site_id** (*basestring*) – siteId path parameter. Site id to which site the device to assign .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!assign-devices-to-site>

```
get_membership(site_id, device_family=None, limit=None, offset=None, serial_number=None,
               headers=None, **request_parameters)
```

Getting the site children details and device details. .

Parameters

- **site_id** (*basestring*) – siteId path parameter. Site id to retrieve device associated with the site. .
- **offset** (*int*) – offset query parameter. offset/starting row .
- **limit** (*int*) – limit query parameter. Number of sites to be retrieved .
- **device_family** (*basestring*) – deviceFamily query parameter. Device family name .
- **serial_number** (*basestring*) – serialNumber query parameter. Device serial number .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-membership>

```
create_site(site=None, type=None, headers=None, payload=None, active_validation=True,
            **request_parameters)
```

Creates site with area/building/floor with specified hierarchy. .

Parameters

- **site** (*object*) – Sites's site.
- **type** (*string*) – Sites's Type of site to create (eg: area, building, floor) . Available values are 'area', 'building' and 'floor'.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!create-site>

get_site(*limit=None, name=None, offset=None, site_id=None, type=None, headers=None, **request_parameters*)

Get site using siteNameHierarchy/siteId/type ,return all sites if these parameters are not given as input. .

Parameters

- **name** (*basestring*) – name query parameter. siteNameHierarchy (ex: global/groupName) .
- **site_id** (*basestring*) – siteId query parameter. Site id to which site details to retrieve. .
- **type** (*basestring*) – type query parameter. type (ex: area, building, floor) .
- **offset** (*int*) – offset query parameter. offset/starting row. The default value is 1 .
- **limit** (*int*) – limit query parameter. Number of sites to be retrieved. The default value is 500 .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-site>

get_site_health(*limit=None, offset=None, site_type=None, timestamp=None, headers=None, **request_parameters*)

Returns Overall Health information for all sites .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the Site Hierarchy data is required .
- **site_type** (*basestring*) – siteType query parameter. Type of the site to return. AREA or BUILDING. Default to AREA .
- **offset** (*int*) – offset query parameter. The offset value, starting from 1, of the first returned site entry. Default is 1 .
- **limit** (*int*) – limit query parameter. The max number of sites in the returned data set. Default is 25, and max at 50 .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-site-health>

get_site_count(*site_id=None, headers=None, **request_parameters*)

API to get site count .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Site id to retrieve site count. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-site-count>

```
update_site(site_id, site=None, type=None, headers=None, payload=None, active_validation=True,
            **request_parameters)
```

Update site area/building/floor with specified hierarchy and new values .

Parameters

- **site** (*object*) – Sites's site.
- **type** (*string*) – Sites's Type. Available values are 'area', 'building' and 'floor'.
- **site_id** (*basestring*) – siteId path parameter. Site id to which site details to be updated.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-site>

```
delete_site(site_id, headers=None, **request_parameters)
```

Delete site with area/building/floor by siteId. .

Parameters

- **site_id** (*basestring*) – siteId path parameter. Site id to which site details to be deleted.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- ***ApiError*** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-site>

software_image_management_swim

class SoftwareImageManagementSwim

Cisco DNA Center Software Image Management (SWIM) API (version: 2.3.5.3).

Wraps the DNA Center Software Image Management (SWIM) API and exposes the API as native Python methods that return native Python objects.

trigger_software_image_activation(*schedule_validate=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Activates a software image on a given device. Software image must be present in the device flash .

Parameters

- **schedule_validate** (*bool*) – scheduleValidate query parameter. scheduleValidate, validates data before schedule (Optional) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!trigger-software-image-activation>

trigger_software_image_distribution(*headers=None, payload=None, active_validation=True, **request_parameters*)

Distributes a software image on a given device. Software image must be imported successfully into DNA Center before it can be distributed .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!trigger-software-image-distribution>

```
get_software_image_details(application_type=None, created_time=None, family=None,
                           image_integrity_status=None, image_name=None, image_series=None,
                           image_size_greater_than=None, image_size_lesser_than=None,
                           image_uuid=None, is_cco_latest=None, is_cco_recommended=None,
                           is_tagged_golden=None, limit=None, name=None, offset=None,
                           sort_by=None, sort_order=None, version=None, headers=None,
                           **request_parameters)
```

Returns software image list based on a filter criteria. For example: “filterbyName = cat3k%” .

Parameters

- **image_uuid** (*basestring*) – imageUuid query parameter.
- **name** (*basestring*) – name query parameter.
- **family** (*basestring*) – family query parameter.
- **application_type** (*basestring*) – applicationType query parameter.
- **image_integrity_status** (*basestring*) – imageIntegrityStatus query parameter. imageIntegrityStatus FAILURE, UNKNOWN, VERIFIED .
- **version** (*basestring*) – version query parameter. software Image Version .
- **image_series** (*basestring*) – imageSeries query parameter. image Series .
- **image_name** (*basestring*) – imageName query parameter. image Name .
- **is_tagged_golden** (*bool*) – isTaggedGolden query parameter. is Tagged Golden .
- **is_cco_recommended** (*bool*) – isCCORecommended query parameter. is recommended from cisco.com .
- **is_cco_latest** (*bool*) – isCCOLatest query parameter. is latest from cisco.com .
- **created_time** (*int*) – createdTime query parameter. time in milliseconds (epoch format) .
- **image_size_greater_than** (*int*) – imageSizeGreaterThan query parameter. size in bytes .
- **image_size_lesser_than** (*int*) – imageSizeLesserThan query parameter. size in bytes .

- **sort_by** (*basestring*) – sortBy query parameter. sort results by this field .
- **sort_order** (*basestring*) – sortOrder query parameter. sort order ‘asc’ or ‘des’. Default is asc .
- **limit** (*int*) – limit query parameter.
- **offset** (*int*) – offset query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-software-image-details>

get_device_family_identifiers(*headers=None, **request_parameters*)

API to get Device Family Identifiers for all Device Families that can be used for tagging an image golden. .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-device-family-identifiers>

tag_as_golden_image(*deviceFamilyIdentifier=None, deviceRole=None, imageId=None, siteId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Golden Tag image. Set siteId as -1 for Global site. .

Parameters

- **deviceFamilyIdentifier** (*string*) – Software Image Management (SWIM)’s Device Family Identifier e.g. : 277696480-283933147, 277696480 .
- **deviceRole** (*string*) – Software Image Management (SWIM)’s Device Role. Permissible Values : ALL, UNKNOWN, ACCESS, BORDER ROUTER, DISTRIBUTION and CORE. .
- **imageId** (*string*) – Software Image Management (SWIM)’s imageId in uuid format. .
- **siteId** (*string*) – Software Image Management (SWIM)’s SiteId in uuid format. For Global Site “-1” to be used. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!tag-as-golden-image>

```
remove_golden_tag_for_image(device_family_identifier, device_role, image_id, site_id, headers=None,  
                             **request_parameters)
```

Remove golden tag. Set siteId as -1 for Global site. .

Parameters

- **site_id** (*basestring*) – siteId path parameter. Site Id in uuid format. Set siteId as -1 for Global site. .
- **device_family_identifier** (*basestring*) – deviceFamilyIdentifier path parameter. Device family identifier e.g. : 277696480-283933147, e.g. : 277696480 .
- **device_role** (*basestring*) – deviceRole path parameter. Device Role. Permissible Values : ALL, UNKNOWN, ACCESS, BORDER ROUTER, DISTRIBUTION and CORE. .
- **image_id** (*basestring*) – imageId path parameter. Image Id in uuid format. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!remove-golden-tag-for-image>

get_golden_tag_status_of_an_image(*device_family_identifier*, *device_role*, *image_id*, *site_id*,
headers=None, ***request_parameters*)

Get golden tag status of an image. Set siteId as -1 for Global site. .

Parameters

- **site_id** (*basestring*) – siteId path parameter. Site Id in uuid format. Set siteId as -1 for Global site. .
- **device_family_identifier** (*basestring*) – deviceFamilyIdentifier path parameter. Device family identifier e.g. : 277696480-283933147, e.g. : 277696480 .
- **device_role** (*basestring*) – deviceRole path parameter. Device Role. Permissible Values : ALL, UNKNOWN, ACCESS, BORDER ROUTER, DISTRIBUTION and CORE. .
- **image_id** (*basestring*) – imageId path parameter. Image Id in uuid format. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-golden-tag-status-of-an-image>

import_local_software_image(*multipart_fields*, *multipart_monitor_callback*, *is_third_party*=None,
third_party_application_type=None, *third_party_image_family*=None,
third_party_vendor=None, *headers*=None, ***request_parameters*)

Fetches a software image from local file system and uploads to DNA Center. Supported software image files extensions are bin, img, tar, smu, pie, aes, iso, ova, tar_gz and qcow2 .

The following code gives an example of the multipart_fields.

```
multipart_fields={'file': ('file.zip', open('file.zip', 'rb'))}
multipart_fields={'file': ('file.txt', open('file.txt', 'rb')),
                  'text/plain',
                  {'X-My-Header': 'my-value'}}}
multipart_fields=[('images', ('foo.png', open('foo.png', 'rb'),
                              'image/png')),
                  ('images', ('bar.png', open('bar.png', 'rb'), 'image/png'))]
```

The following example demonstrates how to use `multipart_monitor_callback=create_callback` to create a progress bar using clint.

```
from clint.textui.progress import Bar
def create_callback(encoder):
    encoder_len = encoder.len
    bar = Bar(expected_size=encoder_len,
              filled_char="=")
    def callback(monitor):
        bar.show(monitor.bytes_read)
    return callback
```

Parameters

- **is_third_party** (*bool*) – isThirdParty query parameter. Third party Image check .
- **third_party_vendor** (*basestring*) – thirdPartyVendor query parameter. Third Party Vendor .
- **third_party_image_family** (*basestring*) – thirdPartyImageFamily query parameter. Third Party image family .
- **third_party_application_type** (*basestring*) – thirdPartyApplicationType query parameter. Third Party Application Type .
- **multipart_fields** (*dict*) – Fields from which to create a multipart/form-data body.
- **multipart_monitor_callback** (*function*) – function used to monitor the progress of the upload.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.

- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!import-local-software-image>

```
import_software_image_via_url(schedule_at=None, schedule_desc=None, schedule_origin=None,
                               headers=None, payload=None, active_validation=True,
                               **request_parameters)
```

Fetches a software image from remote file system (using URL for HTTP/FTP) and uploads to DNA Center. Supported image files extensions are bin, img, tar, smu, pie, aes, iso, ova, tar_gz and qcow2 .

Parameters

- **schedule_at** (*basestring*) – scheduleAt query parameter. Epoch Time (The number of milli-seconds since January 1 1970 UTC) at which the distribution should be scheduled (Optional) .
- **schedule_desc** (*basestring*) – scheduleDesc query parameter. Custom Description (Optional) .
- **schedule_origin** (*basestring*) – scheduleOrigin query parameter. Originator of this call (Optional) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!import-software-image-via-url>

system_settings

class SystemSettings

Cisco DNA Center System Settings API (version: 2.3.5.3).

Wraps the DNA Center System Settings API and exposes the API as native Python methods that return native Python objects.

get_authentication_and_policy_servers(*is_ise_enabled=None, role=None, state=None, headers=None, **request_parameters*)

API to get Authentication and Policy Servers .

Parameters

- **is_ise_enabled** (*bool*) – isIseEnabled query parameter. Valid values are : true, false .
- **state** (*basestring*) – state query parameter. Valid values are: INPROGRESS, ACTIVE, DELETED, RBAC-FAILURE, FAILED .
- **role** (*basestring*) – role query parameter. Authentication and Policy Server Role (Example: primary, secondary) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-authentication-and-policy-servers>

custom_prompt_support_g_e_t_api(*headers=None, **request_parameters*)

Returns supported custom prompts by Cisco DNA Center .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!custom-prompt-support-g-e-t-api>

custom_prompt_p_o_s_t_api(*passwordPrompt=None, usernamePrompt=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Save custom prompt added by user in Cisco DNA Center. API will always override the existing prompts. User should provide all the custom prompt in case of any update .

Parameters

- **passwordPrompt** (*string*) – System Settings’s Password Prompt.
- **usernamePrompt** (*string*) – System Settings’s Username Prompt.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/custom-prompt-p-o-s-t-api>

tag

class Tag

Cisco DNA Center Tag API (version: 2.3.5.3).

Wraps the DNA Center Tag API and exposes the API as native Python methods that return native Python objects.

update_tag(*description=None, dynamicRules=None, id=None, instanceTenantId=None, name=None, systemTag=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates a tag specified by id .

Parameters

- **description** (*string*) – Tag’s description.
- **dynamicRules** (*list*) – Tag’s dynamicRules (list of objects).
- **id** (*string*) – Tag’s id.
- **instanceTenantId** (*string*) – Tag’s instanceTenantId.
- **name** (*string*) – Tag’s name.

- **systemTag** (*boolean*) – Tag’s systemTag.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-tag>

get_tag(*additional_info_attributes=None, additional_info_name_space=None, field=None, level=None, limit=None, name=None, offset=None, order=None, size=None, sort_by=None, system_tag=None, headers=None, **request_parameters*)

Returns the tags for given filter criteria .

Parameters

- **name** (*basestring*) – name query parameter. Tag name is mandatory when filter operation is used. .
- **additional_info_name_space** (*basestring*) – additionalInfo.nameSpace query parameter.
- **additional_info_attributes** (*basestring*) – additionalInfo.attributes query parameter.
- **level** (*basestring*) – level query parameter.
- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **size** (*basestring*) – size query parameter. size in kilobytes(KB) .
- **field** (*basestring*) – field query parameter. Available field names are :’name,id,parentId,type,additionalInfo.nameSpace,additionalInfo.attributes’ .
- **sort_by** (*basestring*) – sortBy query parameter. Only supported attribute is name. SortyBy is mandatory when order is used. .
- **order** (*basestring*) – order query parameter. Available values are asc and des .
- **system_tag** (*basestring*) – systemTag query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-tag>

```
create_tag(description=None, dynamicRules=None, id=None, instanceTenantId=None, name=None,
            systemTag=None, headers=None, payload=None, active_validation=True,
            **request_parameters)
```

Creates tag with specified tag attributes .

Parameters

- **description** (*string*) – Tag's description.
- **dynamicRules** (*list*) – Tag's dynamicRules (list of objects).
- **id** (*string*) – Tag's id.
- **instanceTenantId** (*string*) – Tag's instanceTenantId.
- **name** (*string*) – Tag's name.
- **systemTag** (*boolean*) – Tag's systemTag.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-tag>

get_tag_count(*attribute_name=None, level=None, name=None, name_space=None, size=None, system_tag=None, headers=None, **request_parameters*)

Returns tag count .

Parameters

- **name** (*basestring*) – name query parameter.
- **name_space** (*basestring*) – nameSpace query parameter.
- **attribute_name** (*basestring*) – attributeName query parameter.
- **level** (*basestring*) – level query parameter.
- **size** (*basestring*) – size query parameter. size in kilobytes(KB) .
- **system_tag** (*basestring*) – systemTag query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-tag-count>

updates_tag_membership(*memberToTags=None, memberType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates tag membership. As part of the request payload through this API, only the specified members are added / retained to the given input tags. Possible values of memberType attribute in the request payload can be queried by using the /tag/member/type API .

Parameters

- **memberToTags** (*list*) – Tag's memberToTags (list of objects).
- **memberType** (*string*) – Tag's memberType.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!updates-tag-membership>

get_tag_resource_types(*headers=None, **request_parameters*)

Returns list of supported resource types .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-tag-resource-types>

delete_tag(*id, headers=None, **request_parameters*)

Deletes a tag specified by id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!delete-tag>**get_tag_by_id**(*id*, *headers=None*, ***request_parameters*)

Returns tag specified by Id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-tag-by-id>**get_tag_members_by_id**(*id*, *member_type*, *level=None*, *limit=None*, *member_association_type=None*, *offset=None*, *headers=None*, ***request_parameters*)

Returns tag members specified by id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **member_type** (*basestring*) – memberType query parameter. Entity type of the member. Possible values can be retrieved by using /tag/member/type API .
- **offset** (*basestring*) – offset query parameter. Used for pagination. It indicates the starting row number out of available member records .
- **limit** (*basestring*) – limit query parameter. Used to Number of maximum members to return in the result .

- **member_association_type** (*basestring*) – memberAssociationType query parameter. Indicates how the member is associated with the tag. Possible values and description. 1) DYNAMIC : The member is associated to the tag through rules. 2) STATIC – The member is associated to the tag manually. 3) MIXED – The member is associated manually and also satisfies the rule defined for the tag .
- **level** (*basestring*) – level query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-tag-members-by-id>

add_members_to_the_tag(*id*, *object=None*, *headers=None*, *payload=None*, *active_validation=True*, ***request_parameters*)

Adds members to the tag specified by id .

Parameters

- **object** (*string*) – Tag's object.
- **id** (*basestring*) – id path parameter. Tag ID .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!add-members-to-the-tag>

get_tag_member_count(*id*, *member_type*, *level=None*, *member_association_type=None*, *headers=None*, ***request_parameters*)

Returns the number of members in a given tag .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **member_type** (*basestring*) – memberType query parameter.
- **member_association_type** (*basestring*) – memberAssociationType query parameter.
- **level** (*basestring*) – level query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-tag-member-count>

remove_tag_member(*id*, *member_id*, *headers=None*, ***request_parameters*)

Removes Tag member from the tag specified by id .

Parameters

- **id** (*basestring*) – id path parameter. Tag ID .
- **member_id** (*basestring*) – memberId path parameter. TagMember id to be removed from tag .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!remove-tag-member>

task**class Task**

Cisco DNA Center Task API (version: 2.3.5.3).

Wraps the DNA Center Task API and exposes the API as native Python methods that return native Python objects.

get_business_api_execution_details(*execution_id*, *headers=None*, ***request_parameters*)

Retrieves the execution details of a Business API .

Parameters

- **execution_id** (*basestring*) – executionId path parameter. Execution Id of API .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-business-api-execution-details>

get_tasks(*data=None*, *end_time=None*, *error_code=None*, *failure_reason=None*, *is_error=None*, *limit=None*, *offset=None*, *order=None*, *parent_id=None*, *progress=None*, *service_type=None*, *sort_by=None*, *start_time=None*, *username=None*, *headers=None*, ***request_parameters*)

Returns task(s) based on filter criteria .

Parameters

- **start_time** (*basestring*) – startTime query parameter. This is the epoch start time from which tasks need to be fetched .
- **end_time** (*basestring*) – endTime query parameter. This is the epoch end time upto which audit records need to be fetched .
- **data** (*basestring*) – data query parameter. Fetch tasks that contains this data .

- **error_code** (*basestring*) – errorCode query parameter. Fetch tasks that have this error code .
- **service_type** (*basestring*) – serviceType query parameter. Fetch tasks with this service type .
- **username** (*basestring*) – username query parameter. Fetch tasks with this username .
- **progress** (*basestring*) – progress query parameter. Fetch tasks that contains this progress .
- **is_error** (*basestring*) – isError query parameter. Fetch tasks ended as success or failure. Valid values: true, false .
- **failure_reason** (*basestring*) – failureReason query parameter. Fetch tasks that contains this failure reason .
- **parent_id** (*basestring*) – parentId query parameter. Fetch tasks that have this parent Id .
- **offset** (*int*) – offset query parameter.
- **limit** (*int*) – limit query parameter.
- **sort_by** (*basestring*) – sortBy query parameter. Sort results by this field .
- **order** (*basestring*) – order query parameter. Sort order asc or dsc .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/get-tasks>

get_task_count(*data=None, end_time=None, error_code=None, failure_reason=None, is_error=None, parent_id=None, progress=None, service_type=None, start_time=None, username=None, headers=None, **request_parameters*)

Returns Task count .

Parameters

- **start_time** (*basestring*) – startTime query parameter. This is the epoch start time from which tasks need to be fetched .
- **end_time** (*basestring*) – endTime query parameter. This is the epoch end time upto which audit records need to be fetched .
- **data** (*basestring*) – data query parameter. Fetch tasks that contains this data .

- **error_code** (*basestring*) – errorCode query parameter. Fetch tasks that have this error code .
- **service_type** (*basestring*) – serviceType query parameter. Fetch tasks with this service type .
- **username** (*basestring*) – username query parameter. Fetch tasks with this username .
- **progress** (*basestring*) – progress query parameter. Fetch tasks that contains this progress .
- **is_error** (*basestring*) – isError query parameter. Fetch tasks ended as success or failure. Valid values: true, false .
- **failure_reason** (*basestring*) – failureReason query parameter. Fetch tasks that contains this failure reason .
- **parent_id** (*basestring*) – parentId query parameter. Fetch tasks that have this parent Id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-task-count>

get_task_by_operationid(*limit, offset, operation_id, headers=None, **request_parameters*)

Returns root tasks associated with an Operationid .

Parameters

- **operation_id** (*basestring*) – operationId path parameter.
- **offset** (*int*) – offset path parameter. Index, minimum value is 0 .
- **limit** (*int*) – limit path parameter. The maximum value of {limit} supported is 500. Base 1 indexing for {limit}, minimum value is 1 .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-task-by-operationid>**get_task_by_id**(*task_id*, *headers=None*, ***request_parameters*)

Returns a task by specified id .

Parameters

- **task_id** (*basestring*) – taskId path parameter. UUID of the Task .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:<https://developer.cisco.com/docs/dna-center/#!get-task-by-id>**get_task_tree**(*task_id*, *headers=None*, ***request_parameters*)

Returns a task with its children tasks by based on their id .

Parameters

- **task_id** (*basestring*) – taskId path parameter. UUID of the Task .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type*MyDict***Raises**

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-task-tree>

topology

class Topology

Cisco DNA Center Topology API (version: 2.3.5.3).

Wraps the DNA Center Topology API and exposes the API as native Python methods that return native Python objects.

get_overall_network_health(*timestamp=None, headers=None, **request_parameters*)

Returns Overall Network Health information by Device category (Access, Distribution, Core, Router, Wireless) for any given point of time .

Parameters

- **timestamp** (*basestring*) – timestamp query parameter. Epoch time(in milliseconds) when the Network health data is required .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-overall-network-health>

get_topology_details(*vlan_id, headers=None, **request_parameters*)

Returns Layer 2 network topology by specified VLAN ID .

Parameters

- **vlan_id** (*basestring*) – vlanID path parameter. Vlan Name for e.g Vlan1, Vlan23 etc .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-topology-details>

get_l3_topology_details(*topology_type*, *headers=None*, ***request_parameters*)

Returns the Layer 3 network topology by routing protocol .

Parameters

- **topology_type** (*basestring*) – topologyType path parameter. Type of topology(OSPF,ISIS,etc) .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-l3-topology-details>

get_physical_topology(*node_type=None*, *headers=None*, ***request_parameters*)

Returns the raw physical topology by specified criteria of nodeType .

Parameters

- **node_type** (*basestring*) – nodeType query parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-physical-topology>

get_site_topology(*headers=None, **request_parameters*)

Returns site topology .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-site-topology>

get_vlan_details(*headers=None, **request_parameters*)

Returns the list of VLAN names .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-vlan-details>

userand_roles**users****class Users**

Cisco DNA Center Users API (version: 2.3.5.3).

Wraps the DNA Center Users API and exposes the API as native Python methods that return native Python objects.

get_user_enrichment_details(*headers=None, **request_parameters*)

Enriches a given network End User context (a network user-id or end user's device Mac Address) with details about the user and devices that the user is connected to .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-user-enrichment-details>

wireless

class Wireless

Cisco DNA Center Wireless API (version: 2.3.5.3).

Wraps the DNA Center Wireless API and exposes the API as native Python methods that return native Python objects.

sensor_test_results(*end_time=None, site_id=None, start_time=None, test_failure_by=None, headers=None, **request_parameters*)

Intent API to get SENSOR test result summary .

Parameters

- **site_id** (*basestring*) – siteId query parameter. Assurance site UUID .
- **start_time** (*int*) – startTime query parameter. The epoch time in milliseconds .
- **end_time** (*int*) – endTime query parameter. The epoch time in milliseconds .
- **test_failure_by** (*basestring*) – testFailureBy query parameter. Obtain failure statistics group by “area”, “building”, or “floor” .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!sensor-test-results>

create_and_provision_ssid(*enableFabric=None, flexConnect=None, managedAPLocations=None, ssidDetails=None, ssidType=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Creates SSID, updates the SSID to the corresponding site profiles and provision it to the devices matching the given sites .

Parameters

- **enableFabric** (*boolean*) – Wireless’s Enable SSID for Fabric .
- **flexConnect** (*object*) – Wireless’s flexConnect.
- **managedAPLocations** (*list*) – Wireless’s Managed AP Locations (Enter entire Site(s) hierarchy) (list of strings).
- **ssidDetails** (*object*) – Wireless’s ssidDetails.

- **ssidType** (*string*) – Wireless’s SSID Type . Available values are ‘Guest’ and ‘Enterprise’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-and-provision-ssid>

delete_ssid_and_provision_it_to_devices(*managed_aplocations*, *ssid_name*, *headers=None*,
***request_parameters*)

Removes SSID or WLAN from the network profile, reprovision the device(s) and deletes the SSID or WLAN from DNA Center .

Parameters

- **ssid_name** (*basestring*) – ssidName path parameter.
- **managed_aplocations** (*basestring*) – managedAPLocations path parameter.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-ssid-and-provision-it-to-devices>

reboot_access_points(*apMacAddresses=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Users can reboot multiple access points up-to 200 at a time using this API .

Parameters

- **apMacAddresses** (*list*) – Wireless's The ethernet MAC address of the access point. (list of strings).
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!reboot-access-points>

get_access_point_reboot_task_result(*parent_task_id=None, headers=None, **request_parameters*)

Users can query the access point reboot status using this intent API .

Parameters

- **parent_task_id** (*basestring*) – parentTaskId query parameter. task id of ap reboot request .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-access-point-reboot-task-result>

get_enterprise_ssids(ssid_name=None, headers=None, **request_parameters)

Gets either one or all the enterprise SSID .

Parameters

- **ssid_name** (*basestring*) – ssidName query parameter. Enter the enterprise SSID name that needs to be retrieved. If not entered, all the enterprise SSIDs will be retrieved. .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-enterprise-ssid>

create_enterprise_ssids(basicServiceSetClientIdleTimeout=None, clientExclusionTimeout=None, enableBasicServiceSetMaxIdle=None, enableBroadcastSSID=None, enableClientExclusion=None, enableDirectedMulticastService=None, enableFastLane=None, enableMACFiltering=None, enableNeighborList=None, enableSessionTimeOut=None, fastTransition=None, mfpClientProtection=None, name=None, nasOptions=None, passphrase=None, radioPolicy=None, securityLevel=None, sessionTimeOut=None, trafficType=None, headers=None, payload=None, active_validation=True, **request_parameters)

Creates enterprise SSID .

Parameters

- **basicServiceSetClientIdleTimeout** (*integer*) – Wireless's Basic Service Set Client Idle Timeout.
- **clientExclusionTimeout** (*integer*) – Wireless's Client Exclusion Timeout .
- **enableBasicServiceSetMaxIdle** (*boolean*) – Wireless's Enable Basic Service Set Max Idle .
- **enableBroadcastSSID** (*boolean*) – Wireless's Enable Broadcast SSID .
- **enableClientExclusion** (*boolean*) – Wireless's Enable Client Exclusion .
- **enableDirectedMulticastService** (*boolean*) – Wireless's Enable Directed Multicast Service.
- **enableFastLane** (*boolean*) – Wireless's Enable FastLane .

- **enableMACFiltering** (*boolean*) – Wireless’s Enable MAC Filtering .
- **enableNeighborList** (*boolean*) – Wireless’s Enable Neighbor List.
- **enableSessionTimeout** (*boolean*) – Wireless’s Enable Session Timeout .
- **fastTransition** (*string*) – Wireless’s Fast Transition . Available values are ‘Adaptive’, ‘Enable’ and ‘Disable’.
- **mfpcClientProtection** (*string*) – Wireless’s Management Frame Protection Client. Available values are ‘Optional’, ‘Disabled’ and ‘Required’.
- **name** (*string*) – Wireless’s SSID NAME .
- **nasOptions** (*list*) – Wireless’s Nas Options (list of strings).
- **passphrase** (*string*) – Wireless’s Passphrase .
- **radioPolicy** (*string*) – Wireless’s Radio Policy Enum (enum: Triple band operation (2.4GHz, 5GHz and 6GHz), Triple band operation with band select, 5GHz only, 2.4GHz only, 6GHz only) . Available values are ‘Triple band operation (2.4GHz, 5GHz and 6GHz)’, ‘Triple band operation with band select’, ‘5GHz only’, ‘2.4GHz only’ and ‘6GHz only’.
- **securityLevel** (*string*) – Wireless’s Security Level . Available values are ‘WPA2_ENTERPRISE’, ‘WPA2_PERSONAL’, ‘OPEN’, ‘WPA3_ENTERPRISE’, ‘WPA3_PERSONAL’, ‘WPA2_WPA3_PERSONAL’ and ‘WPA2_WPA3_ENTERPRISE’.
- **sessionTimeout** (*integer*) – Wireless’s Session Time Out .
- **trafficType** (*string*) – Wireless’s Traffic Type Enum (voicedata or data) . Available values are ‘voicedata’ and ‘data’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-enterprise-ssid>

```
update_enterprise_ssid(basicServiceSetClientIdleTimeout=None, clientExclusionTimeout=None,
                        enableBasicServiceSetMaxIdle=None, enableBroadcastSSID=None,
                        enableClientExclusion=None, enableDirectedMulticastService=None,
                        enableFastLane=None, enableMACFiltering=None, enableNeighborList=None,
                        enableSessionTimeOut=None, fastTransition=None, mfpClientProtection=None,
                        name=None, nasOptions=None, passphrase=None, radioPolicy=None,
                        securityLevel=None, sessionTimeOut=None, trafficType=None, headers=None,
                        payload=None, active_validation=True, **request_parameters)
```

Update enterprise SSID .

Parameters

- **basicServiceSetClientIdleTimeout** (*integer*) – Wireless’s Basic Service Set Client Idle Timeout.
- **clientExclusionTimeout** (*integer*) – Wireless’s Client Exclusion Timeout .
- **enableBasicServiceSetMaxIdle** (*boolean*) – Wireless’s Enable Basic Service Set Max Idle .
- **enableBroadcastSSID** (*boolean*) – Wireless’s Enable Broadcast SSID .
- **enableClientExclusion** (*boolean*) – Wireless’s Enable Client Exclusion .
- **enableDirectedMulticastService** (*boolean*) – Wireless’s Enable Directed Multicast Service.
- **enableFastLane** (*boolean*) – Wireless’s Enable FastLane .
- **enableMACFiltering** (*boolean*) – Wireless’s Enable MAC Filtering .
- **enableNeighborList** (*boolean*) – Wireless’s Enable Neighbor List.
- **enableSessionTimeOut** (*boolean*) – Wireless’s Enable Session Timeout .
- **fastTransition** (*string*) – Wireless’s Fast Transition . Available values are ‘Adaptive’, ‘Enable’ and ‘Disable’.
- **mfpClientProtection** (*string*) – Wireless’s Management Frame Protection Client. Available values are ‘Optional’, ‘Disabled’ and ‘Required’.
- **name** (*string*) – Wireless’s SSID NAME .
- **nasOptions** (*list*) – Wireless’s Nas Options (list of strings).
- **passphrase** (*string*) – Wireless’s Passphrase .
- **radioPolicy** (*string*) – Wireless’s Radio Policy Enum (enum: Triple band operation (2.4GHz, 5GHz and 6GHz), Triple band operation with band select, 5GHz only, 2.4GHz only, 6GHz only) . Available values are ‘Triple band operation (2.4GHz, 5GHz and 6GHz)’, ‘Triple band operation with band select’, ‘5GHz only’, ‘2.4GHz only’ and ‘6GHz only’.
- **securityLevel** (*string*) – Wireless’s Security Level . Available values are ‘WPA2_ENTERPRISE’, ‘WPA2_PERSONAL’, ‘OPEN’, ‘WPA3_ENTERPRISE’, ‘WPA3_PERSONAL’, ‘WPA2_WPA3_PERSONAL’ and ‘WPA2_WPA3_ENTERPRISE’.
- **sessionTimeOut** (*integer*) – Wireless’s Session Time Out .
- **trafficType** (*string*) – Wireless’s Traffic Type Enum (voicedata or data) . Available values are ‘voicedata’ and ‘data’.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.

- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-enterprise-ssid>

delete_enterprise_ssid(*ssid_name*, *headers=None*, ***request_parameters*)

Deletes given enterprise SSID .

Parameters

- **ssid_name** (*basestring*) – ssidName path parameter. Enter the SSID name to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-enterprise-ssid>

delete_wireless_profile(*wireless_profile_name*, *headers=None*, ***request_parameters*)

Delete the Wireless Profile from Cisco DNA Center whose name is provided. .

Parameters

- **wireless_profile_name** (*basestring*) – wirelessProfileName path parameter. Wireless Profile Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .

- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-wireless-profile>

```
configure_access_points(adminStatus=None, apHeight=None, apList=None, apMode=None,
    configureAdminStatus=None, configureApHeight=None,
    configureApMode=None, configureFailoverPriority=None,
    configureHAController=None, configureLedBrightnessLevel=None,
    configureLedStatus=None, configureLocation=None, failoverPriority=None,
    ledBrightnessLevel=None, ledStatus=None, location=None,
    primaryControllerName=None, primaryIpAddress=None,
    radioConfigurations=None, secondaryControllerName=None,
    secondaryIpAddress=None, tertiaryControllerName=None,
    tertiaryIpAddress=None, headers=None, payload=None,
    active_validation=True, **request_parameters)
```

User can configure multiple access points with required options using this intent API .

Parameters

- **adminStatus** (*boolean*) – Wireless's Configure the access point's admin status. Set this parameter's value to "true" to enable it and "false" to disable it. .
- **apHeight** (*number*) – Wireless's Configure the height of the access point by setting a value between 3 and height of the floor. .
- **apList** (*list*) – Wireless's apList (list of objects).
- **apMode** (*integer*) – Wireless's Configure the access point's mode: for local/flexconnect mode, set "0"; for monitor mode, set "1"; for sniffer mode, set "4"; and for bridge/flex+bridge mode, set "5". .
- **configureAdminStatus** (*boolean*) – Wireless's To change the access point's admin status, set this parameter's value to "true". .
- **configureApHeight** (*boolean*) – Wireless's To change the access point's height, set this parameter's value to "true". .
- **configureApMode** (*boolean*) – Wireless's To change the access point's mode, set this parameter's value to "true". .
- **configureFailoverPriority** (*boolean*) – Wireless's To change the access point's failover priority, set this parameter's value to "true". .
- **configureHAController** (*boolean*) – Wireless's To change the access point's HA controller, set this parameter's value to "true". .

- **configureLedBrightnessLevel** (*boolean*) – Wireless’s To change the access point’s LED brightness level, set this parameter’s value to “true”. .
- **configureLedStatus** (*boolean*) – Wireless’s To change the access point’s LED status, set this parameter’s value to “true”. .
- **configureLocation** (*boolean*) – Wireless’s To change the access point’s location, set this parameter’s value to “true”. .
- **failoverPriority** (*integer*) – Wireless’s Configure the access point’s failover priority: for low, set “1”; for medium, set “2”; for high, set “3”; and for critical, set “4”. .
- **ledBrightnessLevel** (*integer*) – Wireless’s Configure the access point’s LED brightness level by setting a value between 1 and 8. .
- **ledStatus** (*boolean*) – Wireless’s Configure the access point’s LED status. Set “true” to enable its status and “false” to disable it. .
- **location** (*string*) – Wireless’s Configure the access point’s location. .
- **primaryControllerName** (*string*) – Wireless’s Configure the hostname for an access point’s primary controller. .
- **primaryIpAddress** (*object*) – Wireless’s primaryIpAddress.
- **radioConfigurations** (*list*) – Wireless’s radioConfigurations (list of objects).
- **secondaryControllerName** (*string*) – Wireless’s Configure the hostname for an access point’s secondary controller. .
- **secondaryIpAddress** (*object*) – Wireless’s secondaryIpAddress.
- **tertiaryControllerName** (*string*) – Wireless’s Configure the hostname for an access point’s tertiary controller. .
- **tertiaryIpAddress** (*object*) – Wireless’s tertiaryIpAddress.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!/configure-access-points>

get_access_point_configuration_task_result(*task_id*, *headers=None*, ***request_parameters*)

Users can query the access point configuration result using this intent API .

Parameters

- **task_id** (*basestring*) – task_id path parameter. task id information of ap config .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-access-point-configuration-task-result>

get_access_point_configuration(*key*, *headers=None*, ***request_parameters*)

Users can query the access point configuration information per device using the ethernet MAC address .

Parameters

- **key** (*basestring*) – key query parameter. The ethernet MAC address of Access point .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-access-point-configuration>

ap_provision(*headers=None, payload=None, active_validation=True, **request_parameters*)

Access Point Provision and ReProvision .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!ap-provision>

create_update_dynamic_interface(*interfaceName=None, vlanId=None, headers=None, payload=None, active_validation=True, **request_parameters*)

API to create or update an dynamic interface .

Parameters

- **interfaceName** (*string*) – Wireless's dynamic-interface name .
- **vlanId** (*number*) – Wireless's Vlan Id .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-update-dynamic-interface>

get_dynamic_interface(*interface_name=None, headers=None, **request_parameters*)

Get one or all dynamic interface(s) .

Parameters

- **interface_name** (*basestring*) – interface-name query parameter. dynamic-interface name, if not specified all the existing dynamic interfaces will be retrieved .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-dynamic-interface>

delete_dynamic_interface(*interface_name, headers=None, **request_parameters*)

Delete a dynamic interface .

Parameters

- **interface_name** (*basestring*) – interfaceName path parameter. valid interface-name to be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-dynamic-interface>

update_wireless_profile(*profileDetails=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Updates the wireless Network Profile with updated details provided. All sites to be present in the network profile should be provided. .

Parameters

- **profileDetails** (*object*) – Wireless’s profileDetails.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!update-wireless-profile>

create_wireless_profile(*profileDetails=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Creates Wireless Network Profile on Cisco DNA Center and associates sites and SSIDs to it. .

Parameters

- **profileDetails** (*object*) – Wireless’s profileDetails.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-wireless-profile>

get_wireless_profile(*profile_name=None, headers=None, **request_parameters*)

Gets either one or all the wireless network profiles if no name is provided for network-profile. .

Parameters

- **profile_name** (*basestring*) – profileName query parameter. Wireless Network Profile Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. A list of MyDict objects. Access the object's properties by using the dot notation or the bracket notation.

Return type

list

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!get-wireless-profile>

provision_update(*headers=None, payload=None, active_validation=True, **request_parameters*)

Updates wireless provisioning .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!provision-update>

provision(*headers=None, payload=None, active_validation=True, **request_parameters*)

Provision wireless devices .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!provision>

psk_override(*headers=None, payload=None, active_validation=True, **request_parameters*)

Update/override pass phrase of enterprise SSID .

Parameters

- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*list*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.

- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!psk-override>

retrieve_rf_profiles(*rf_profile_name=None, headers=None, **request_parameters*)

Retrieve all RF profiles .

Parameters

- **rf_profile_name** (*basestring*) – rf-profile-name query parameter. RF Profile Name .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object's properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!retrieve-rf-profiles>

create_or_update_rf_profile(*channelWidth=None, defaultRfProfile=None, enableBrownField=None, enableCustom=None, enableRadioTypeA=None, enableRadioTypeB=None, enableRadioTypeC=None, name=None, radioTypeAProperties=None, radioTypeBProperties=None, radioTypeCProperties=None, headers=None, payload=None, active_validation=True, **request_parameters*)

Create or Update RF profile .

Parameters

- **channelWidth** (*string*) – Wireless's Channel Width .
- **defaultRfProfile** (*boolean*) – Wireless's is Default Rf Profile .
- **enableBrownField** (*boolean*) – Wireless's Enable Brown Field .
- **enableCustom** (*boolean*) – Wireless's Enable Custom .
- **enableRadioTypeA** (*boolean*) – Wireless's Enable Radio Type A .
- **enableRadioTypeB** (*boolean*) – Wireless's Enable Radio Type B .
- **enableRadioTypeC** (*boolean*) – Wireless's Enable Radio Type C (6GHz) .
- **name** (*string*) – Wireless's RF Profile Name .
- **radioTypeAProperties** (*object*) – Wireless's radioTypeAProperties.

- **radioTypeBProperties** (*object*) – Wireless’s radioTypeBProperties.
- **radioTypeCProperties** (*object*) – Wireless’s radioTypeCProperties.
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- **payload** (*dict*) – A JSON serializable Python object to send in the body of the Request.
- **active_validation** (*bool*) – Enable/Disable payload validation. Defaults to True.
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!create-or-update-rf-profile>

delete_rf_profiles(*rf_profile_name*, *headers=None*, ***request_parameters*)

Delete RF profile(s) .

Parameters

- **rf_profile_name** (*basestring*) – rfProfileName path parameter. RF profile name to be deleted(required) *non- custom RF profile cannot be deleted .
- **headers** (*dict*) – Dictionary of HTTP Headers to send with the Request .
- ****request_parameters** – Additional request parameters (provides support for parameters that may be added in the future).

Returns

JSON response. Access the object’s properties by using the dot notation or the bracket notation.

Return type

MyDict

Raises

- **TypeError** – If the parameter types are incorrect.
- **MalformedRequest** – If the request body created is invalid.
- **ApiError** – If the DNA Center cloud returns an error.

Documentation Link:

<https://developer.cisco.com/docs/dna-center/#!delete-rf-profiles>

DNA Center Data Object

MyDict

class MyDict

A **Python** `_dict_` subclass which tries to act like **JavaScript** objects, so you can use the **dot notation** (`.`) to access members of the object. If the member doesn't exist yet then it's created when you assign something to it. Brackets notation (`d['foo']`) is also possible.

has_path(*key*)

Check existence of “path” in the tree.

```
d = MyDict({'foo': {'bar': 'baz'}})
d.has_path('foo.bar') == True
```

It only supports “dot-notation” (`d.foo.bar`)

get(*key*, *default=None*)

Return the value for key if key is in the dictionary, else default.

to_json()

Returns a JSON-like string representing this instance

DownloadResponse

class DownloadResponse

Download Response wrapper.

Bases: `urllib3.response.HTTPResponse`. For more information check the [urllib3 documentation](#)

HTTP Response container.

property data

The `HTTPResponse`'s data

property filename

The downloaded filename

property dirpath

The downloaded directory path

property path

The download file path

Exceptions

exception dnacentersdkException

Bases: `Exception`

Base class for all dnacentersdk package exceptions.

exception AccessTokenError

Bases: `dnacentersdkException`

Raised when an incorrect DNA Center Access Token has been provided.

exception VersionError

Bases: [dnacentersdkException](#)

Raised when an incorrect DNA Center version has been provided.

exception ApiError

Bases: [dnacentersdkException](#)

Errors returned in response to requests sent to the DNA Center APIs.

Several data attributes are available for inspection.

response

The `requests.Response` object returned from the API call.

request

The `requests.PreparedRequest` of the API call.

status_code

The HTTP status code from the API response.

status

The HTTP status from the API response.

details

The parsed JSON details from the API response.

message

The error message from the parsed API response.

description

A description of the HTTP Response Code from the API docs.

exception RateLimitError

Bases: [ApiError](#)

Cisco DNA Center Rate-Limit exceeded Error.

Raised when a rate-limit exceeded message is received and the request **will not** be retried.

retry_after

The *Retry-After* time period (in seconds) provided by DNA Center.

Defaults to 15 seconds if the response *Retry-After* header isn't present in the response headers, and defaults to a minimum wait time of 1 second if DNA Center returns a *Retry-After* header of 0 seconds.

exception RateLimitWarning

Bases: [UserWarning](#)

Cisco DNA Center rate-limit exceeded warning.

Raised when a rate-limit exceeded message is received and the request will be retried.

retry_after

The *Retry-After* time period (in seconds) provided by DNA Center.

Defaults to 15 seconds if the response *Retry-After* header isn't present in the response headers, and defaults to a minimum wait time of 1 second if DNA Center returns a *Retry-After* header of 0 seconds.

exception MalformedRequest

Bases: *dnacentersdkException*

Raised when a malformed request is received from DNA Center user.

exception DownloadFailure

Bases: *dnacentersdkException*

Errors returned in response to requests sent to the DNA Center APIs with stream=True.

Several data attributes are available for inspection.

response

The `requests.Response` object returned from the API call.

request

The `requests.PreparedRequest` of the API call.

status_code

The HTTP status code from the API response.

status

The HTTP status from the API response.

original_error

The original exception

raw

The raw value of the API response

THE DEVELOPMENT COMMUNITY

Interested in contributing to the project? Please review our community's Code of Conduct and then check out the Contributing page for info to help you get started.

2.1 Contributor Covenant Code of Conduct

2.1.1 Our Pledge

In the interest of fostering an open and welcoming environment, we as contributors and maintainers pledge to making participation in our project and our community a harassment-free experience for everyone, regardless of age, body size, disability, ethnicity, gender identity and expression, level of experience, nationality, personal appearance, race, religion, or sexual identity and orientation.

2.1.2 Our Standards

Examples of behavior that contributes to creating a positive environment include:

- Using welcoming and inclusive language
- Being respectful of differing viewpoints and experiences
- Gracefully accepting constructive criticism
- Focusing on what is best for the community
- Showing empathy towards other community members

Examples of unacceptable behavior by participants include:

- The use of sexualized language or imagery and unwelcome sexual attention or advances
- Trolling, insulting/derogatory comments, and personal or political attacks
- Public or private harassment
- Publishing others' private information, such as a physical or electronic address, without explicit permission
- Other conduct which could reasonably be considered inappropriate in a professional setting

2.1.3 Our Responsibilities

Project maintainers are responsible for clarifying the standards of acceptable behavior and are expected to take appropriate and fair corrective action in response to any instances of unacceptable behavior.

Project maintainers have the right and responsibility to remove, edit, or reject comments, commits, code, wiki edits, issues, and other contributions that are not aligned to this Code of Conduct, or to ban temporarily or permanently any contributor for other behaviors that they deem inappropriate, threatening, offensive, or harmful.

2.1.4 Scope

This Code of Conduct applies both within project spaces and in public spaces when an individual is representing the project or its community. Examples of representing a project or community include using an official project e-mail address, posting via an official social media account, or acting as an appointed representative at an online or offline event. Representation of a project may be further defined and clarified by project maintainers.

2.1.5 Enforcement

Instances of abusive, harassing, or otherwise unacceptable behavior may be reported by contacting the project team. The project team will review and investigate all complaints, and will respond in a way that it deems appropriate to the circumstances. The project team is obligated to maintain confidentiality with regard to the reporter of an incident. Further details of specific enforcement policies may be posted separately.

Project maintainers who do not follow or enforce the Code of Conduct in good faith may face temporary or permanent repercussions as determined by other members of the project's leadership.

2.1.6 Attribution

This Code of Conduct is adapted from the [Contributor Covenant](#), version 1.4.

2.2 Contributing

dnacentersdk is a community development project. Feedback, thoughts, ideas, and code contributions are most welcome!

2.2.1 How to contribute Feedback, Issues, Thoughts and Ideas

Please use the [issues](#) page to report issues or post ideas for enhancement.

2.2.2 Interested in Contributing Code?

Developer Scripts

We have created some scripts to automate everyday actions needed when working on the project. Please see the [script](#) directory, and its README for more information.

Notes on the Test Suite

The test suite is grouped by DNA Center versions supported in the Cisco DNA Center SDK.

The test suite uses a mockup server, instead of calling to a DNA Center server directly.

The mockup server is not perfect, that is why it is sometimes necessary to rerun a failed test, we do this by using *pytest-rerunfailures*. On the *script/test* file, you can find the *pytest-rerunfailures* settings, adjust them locally if strictly necessary.

Contributing Code - Using the CI Automated Testing

1. Check for open [issues](#) or create a new *issue* for the item you want to work on and make sure to comment and let us know that you are working on it.
2. Fork a copy of the [repository](#) and clone your forked repository to your development environment.
3. Run `script/setup` to install the development dependencies and setup your environment.
4. Configure the following environment variables in your development environment:
 - `TEST_DNA_CENTER_ENCODED_AUTH` - Your test account's DNA Center `encoded_auth` (username:password encoded in base 64). This variable has priority over username and password.
 - `TEST_DNA_CENTER_USERNAME` - Your test account's DNA Center username.
 - `TEST_DNA_CENTER_PASSWORD` - Your test account's DNA Center password.
 - `DEBUG_ENVIRONMENT_VARIABLE` - Your test's debug variable, which controls whether to log information about DNA Center APIs' request and response process.
 - `VERSION_ENVIRONMENT_VARIABLE` - The DNA Center API's version used to test the SDK.
5. Add your code to your forked repository.

If you are creating some new feature or functionality (excellent!), please also write a [test](#) to verify that your code works as expected.
6. We follow [PEP8](#) reasonably strictly for this project. Please make sure your code passes the linter.

Run `script/test lint` or simply run `flake8` from the project root.
7. Commit your changes.
8. Submit a [pull request](#). The GitHub/Travis CI system runs the test suite against your pull request code. If any tests fail, please review your changes. If everything looks good, we will gladly merge your request!

Contributing Code - Running the Test Suite Locally

1. Check for open [issues](#) or create a new 'issue' for the item you want to work on and make sure to comment and let us know that you are working on it.
2. Fork a copy of the [repository](#) and clone your forked repository to your development environment.

Run `script/setup` to install the development dependencies and setup your environment.
3. Configure the following environment variables in your development environment:
 - `TEST_DNA_CENTER_ENCODED_AUTH` - Your test account's DNA Center `encoded_auth` (username:password encoded in base 64). This variable has priority over username and password.
 - `TEST_DNA_CENTER_USERNAME` - Your test account's DNA Center username.

- TEST_DNA_CENTER_PASSWORD - Your test account's DNA Center password.
- DEBUG_ENVIRONMENT_VARIABLE - Your test's debug variable, which controls whether to log information about DNA Center APIs' request and response process.
- VERSION_ENVIRONMENT_VARIABLE - The DNA Center API's version used to test the SDK.

Example:

```
#!/usr/bin/env bash
export TEST_DNA_CENTER_ENCODED_AUTH="<test account's username:password encoded in_
↪base 64>"
```

4. Add your code to your forked repository.

If you are creating some new feature or functionality (excellent!), please also write a `test` to verify that your code works as expected.

5. We follow [PEP8](#) reasonably strictly for this project. Please make sure your code passes the linter.

Run `script/test lint` from the project root.

6. Commit your changes.

7. Ensure your code passes all of the default tests for all the involved DNA Center versions.

Run `script/test` and ensure all tests execute successfully.

8. Submit a [pull request](#). If everything looks good, we will gladly merge your request!

2.3 Changelog

All notable changes to this project will be documented in this file.

The format is based on [Keep a Changelog](#), and this project adheres to [Semantic Versioning](#).

2.3.1 Unreleased

2.3.2 2.6.10 - 2023-11-10

Fixed

- Fixed params in 2.3.5.3 `claim_a_device_to_a_site` from `interfaceName` to `ipInterfaceName`
- Fixed params in 2.3.5.3 `claim_a_device_to_a_site` from `vlanID` to `vlanId`

2.3.3 2.6.9 - 2023-09-20

Changed

- AP port assignment API not working with DNAC APIs of 2.3.3.0 #126, Documetion bug, extra-space in enum.

2.3.4 2.6.8 - 2023-09-12

Changed

- 2_3_3_0 sda sevice add_vn method update.

2.3.5 2.6.7 - 2023-08-25

Changed

- Update readthedocs settings

2.3.6 2.6.6 - 2023-07-10

Changed

- Change requests-toolbelt minimum version #101

2.3.7 2.6.5 - 2023-05-29

Changed

- user_and_roles::Unable to use user and roles module. #112

2.3.8 2.6.4 - 2023-05-25

Changed

- SDK implementation for API Add Edge Device to Sda fabric on DNAC Version 2.3.3.0 inconsistent with previous DNAC versions implementation #90
- Documentatin links updated.
- EoX turns to Eox
- SDK function for version 2.3.3.x (v2_3_3_0/device_onboarding_pnp.py) input requirment does not match with API schema from dnac, #103
- Function name changed to assign_device_credential_to_site in DNAC2.3.5.0(dnacentersdk/api/v2_3_5_3/network_settings.py) #107
- Function names changed in v2.3.5.0 libs all function got added with 2 though no change in DNAC APIs #106
- 2.3.3.0 LAN Automation function names are incorrect #105
- Function name changed in 2.3.3.0 from update_ssid_to_ip_pool_mapping to update_ssid_to_ip_pool_mapping2 #104
- SDK function for version 2.3.3.x (v2_3_3_0/device_onboarding_pnp.py) input requirment does not match with API schema from dnac, #103
- Poor naming of function: v2_3_5_3/authentication_management.py : authentication_ap_i(#102

2.3.9 2.6.3 - 2023-04-28

Changed

- SDK implementation for API Add Edge Device to Sda fabric on DNAC Version 2.3.3.0 inconsistent with previous DNAC versions implementation #90
- Actual error message was not being used in case of exceptions #98
- SDA :: add_default_authentication_profile #97
- DNA_CENTER_VERIFY not being imported correctly from the environment #92, now you can export this as:

```
export DNA_CENTER_VERIFY=false  
export DNA_CENTER_VERIFY=true
```

2.6.2 - 2023-04-25

Changed

- Add issue family on 2.3.3.0

2.3.10 2.6.1 - 2023-04-12

Changed

- Remove some families bug in 2.3.3.0
- Correct families names in 2.3.5.3
- Removing duplicate params

2.3.11 2.6.0 - 2023-04-12

Added

- Add support of DNA Center versions ('2.3.5.3')
- Adds modules for v2_3_5_3

2.3.12 2.5.6 - 2023-01-10

Added

- Compatibility matrix added in `readme.rst`

Fixed

- Offset and limit now support basestring and int
 - dnacentersdk.api.v2_3_3_0.application_policy
 - dnacentersdk.api.v2_3_3_0.applications

2.3.13 2.5.5 - 2022-11-17

Fixed

- Removed enum in `dnacentersdk.api.v2_3_3_0.sda.add_default_authentication_profile`:
 - `authenticateTemplateName`
- Added `Dict_of_str` function call in `custom_caller` headers

2.3.14 2.5.4 - 2022-08-11

Added

- New function on `fabric_wireless` for `v2_3_3_0`.
 - `add_ssid_to_ip_pool_mapping`

2.3.15 2.5.3 - 2022-08-09

Fixed

- virtualNetwork on sda.adds_border_device parameter comes from array to object.
- Parameters borderWidthExternalConnectivity and connectedToInternet on sda.adds_border_device comes from boolean to string.

2.3.16 2.5.2 - 2022-07-29

Fixed

- Removed enum in sda.adds_border_device:
 - externalDomainRoutingProtocolName
- Removed enum in sda.add_multicast_in_sda_fabric:
 - multicastMethod
- Removed enum in site_design.provision_nfv:
 - linkType
- Removed enum in sda.add_transit_peer_network:
 - routingProtocolName
- Removed enum in network_settings.update_network and network_settings.create_network:
 - ipAddress
 - sharedSecret
 - domainName
 - primaryIpAddress
 - secondaryIpAddress
 - network
 - servers

2.3.17 2.5.1 - 2022-07-12

Fixed

- Fixed enum in network_global.create_global_pool:
 - IpAddressSpace

2.3.18 2.5.0 - 2022-06-20

Added

- Add support of DNA Center versions ('2.3.3.0')
- Adds modules for v2_3_3_0

2.3.19 2.4.11 - 2022-06-15

Fixed

- Improved the way of reading the following env variables:
 - wait_on_rate_limit
 - verify
 - debug

2.3.20 2.4.10 - 2022-05-12

Added

- Add following parameters to `delete_ip_pool_from_sda_virtual_network` and `get_ip_pool_from_sda_virtual_network`:
 - site_name_hierarchy

2.3.21 2.4.9 - 2022-04-20

Added

- Add following parameters to `claim_a_device_to_a_site`:
 - gateway
 - imageId
 - ipInterfaceName
 - rfProfile
 - staticIP
 - subnetMask
 - vlanId

2.3.22 2.4.8 - 2022-03-23

Added

- Add `DownloadResponse` class that wraps the `urllib3.response.HTTPResponse`.
- Add `filename` optional parameter to the following functions:
 - `dnacentersdk.api.v1_2_10.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v1_3_0.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v1_3_1.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v1_3_3.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v2_1_1.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v2_1_2.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v2_1_2.reports.Reports.download_report_content`
 - `dnacentersdk.api.v2_2_2_3.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v2_2_2_3.reports.Reports.download_report_content`
 - `dnacentersdk.api.v2_2_3_3.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v2_2_3_3.reports.Reports.download_report_content`

Changed

- Change the response of the following funtions from `urllib3.response.HTTPResponse` to a wrapper `DownloadResponse`.
 - `dnacentersdk.api.v1_2_10.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v1_3_0.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v1_3_1.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v1_3_3.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v2_1_1.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v2_1_2.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v2_1_2.reports.Reports.download_report_content`
 - `dnacentersdk.api.v2_2_2_3.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v2_2_2_3.reports.Reports.download_report_content`
 - `dnacentersdk.api.v2_2_3_3.file.File.download_a_file_by_fileid`
 - `dnacentersdk.api.v2_2_3_3.reports.Reports.download_report_content`

2.3.23 2.4.7 - 2022-03-22

Added

- Add `rfProfile` parameter for request body struct of `claim_a_device_to_a_site`.

2.3.24 2.4.6 - 2022-03-14

Changed

- Update the type of the `externalConnectivitySettings` from object to list in `sda.adds_border_device`
- `interfaceName` is now part of the structure of `externalConnectivitySettings` in `sda.adds_border_device`
- `externalAutonomousSystemNumber` is now part of the structure of `externalConnectivitySettings` in `sda.adds_border_device`
- `l3Handoff` is now part of the structure of `externalConnectivitySettings` in `sda.adds_border_device`
- Update the type of the `l3Handoff` from object to list in `sda.adds_border_device`
- `virtualNetwork` is now part of the structure of `l3Handoff` in `sda.adds_border_device`
- `virtualNetworkName` is now part of the structure of `virtualNetwork` in `sda.adds_border_device`
- `vlanId` is now part of the structure of `virtualNetwork` in `sda.adds_border_device`
- Update models validators of Cisco DNA Center API v2.2.3.3 files for the following functions:
 - `sda.adds_border_device`

2.3.25 2.4.5 - 2022-02-01

Changed

- Adds parameter `id` to `devices.sync_devices` for Cisco DNA Center API v2.2.3.3
- Update response documentation of Cisco DNA Center API v2.2.3.3 files
 - `fabric_wireless.add_ssid_to_ip_pool_mapping`
 - `fabric_wireless.update_ssid_to_ip_pool_mapping`
 - `fabric_wireless.add_w_l_c_to_fabric_domain`
 - `wireless.ap_provision`
 - `wireless.create_update_dynamic_interface`
- Update models validators of Cisco DNA Center API v2.2.3.3 files for the following functions:
 - `devices.sync_devices`

2.3.26 2.4.4 - 2022-01-31

Changed

- Update response documentation of Cisco DNA Center API v2.2.3.3 files
 - application_policy.get_applications
 - device_onboarding_pnp.get_device_list
- Adds parameters `payload` and `active_validation` to the following functions for Cisco DNA Center API v2.2.3.3:
 - site_design.create_floorplan
 - site_design.update_floorplan
- Update models validators of Cisco DNA Center API v2.2.3.3 files for the following functions:
 - site_design.create_floorplan
 - site_design.update_floorplan
 - application_policy.create_application

Fixed

- Removed an extra parameter in the call of `VERIFY_STRING_ENVIRONMENT_VARIABLE`

Added

- Adds parameters `hostname`, `imageInfo` and `configInfo` to `device_onboarding_pnp.pnp_device_claim_to_site`

2.3.27 2.4.3 - 2022-01-19

Fixed

- DNACenterAPI constructor allows for optional arguments [#37](#)

Changed

- Update requirements
- Adds env variables support for import before/after importing DNACenterAPI
- Adds tests for env variables before/after DNACenterAPI import

2.3.28 2.4.2 - 2021-12-14

Fixed

- Fix `add_members_to_the_tag` and `retrieves_all_network_devices` json schemas. ### Updated
- Update json schemas for models/validators and tests/models/models/validators

2.3.29 2.4.1 - 2021-12-01

Changed

- Update to match checksum

2.3.30 2.4.0 - 2021-12-01

Added

- Add support of DNA Center versions ('2.2.3.3')
- Add `retrieves_all_network_devices` funtion

Changed

- Included support for DNAC 2.2.3.3 files
- Update function names:
 - Rename `devices.add_device2` to `devices.add_device`
 - Rename `devices.is_valid_add_device2` to `devices.is_valid_add_device` in tests
 - Rename `devices.test_add_device2` to `devices.test_add_device` in tests
 - Rename `devices.add_device2_default_val` to `devices.add_device_default_val` in tests
- Update missing dnac 2.2.3.3 files

2.3.31 2.3.3 - 2021-11-24

Changed

- Changes to `configuration_templates` functions:
 - Add `payload` and `active_validation` parameters to `clone_given_template` function
 - Change type from `dict` to `list` for parameter `templates` in `create_project`
 - Change type from `dict` to `list` for parameter `templates` in `update_project`
 - Change type from `(list, dict)` to `basesting` for parameter `payload` in `imports_the_projects_provided`
 - Change type from `object` to `list` for parameter `resourceParams` in `preview_template`
 - Removed `active_validation` parameter in `imports_the_projects_provided` function

- Changes to sda functions:
 - Add `isGuestVirtualNetwork` parameter to `add_virtual_network_with_scalable_groups` function
 - Add `isGuestVirtualNetwork` parameter to `update_virtual_network_with_scalable_groups` function

2.3.32 2.3.2 - 2021-09-14

Changed

- Disable `verify=False` warnings of `urllib3`

2.3.33 2.3.1 - 2021-08-10

Fixed

- Fix `devices` param definition & schemas [aba32f3]
- Remove unnecessary `path_params` [25c4e99]

2.3.34 2.3.0 - 2021-08-09

Added

- Add support of DNA Center versions ('2.2.2.3')
- Adds modules for `v2_2_2_3`

Changed

- Updates `download_report_content` of `v2_2_1` function to handle response body and save it as a file.
- Updates `exceptions.py` file to check if `self.details` is dict before attempting access
- Updates `restsession.py` to handle downloads using `Content-Disposition` header rather than custom `fileName` header

2.3.35 2.2.5 - 2021-08-05

Changed

- Fixes #34 by:
 - Removing enum that contain descriptions rather than actual values.
 - Adding `primaryIpAddress` and `secondaryIpAddress` for `v2_2_1` the `"format": "ipv4"` JSON schema property.
- Removes minus char from docstrings.
- Adds `check_type` conditions for 'X-Auth-Token' for `v2_2_1` operations.

2.3.36 2.2.4 - 2021-06-08

Fixed

- Fixes download_a_file_by_fileid and import_local_software_image for v2_2_1

2.3.37 2.2.3 - 2021-06-08

Changed

- Update project dependencies & settings
- Update LICENSE
- Update tests (lint, mock server order, validators)
- Update docs for v2_2_1
- Fix functions args for 2_2_1
- Update LICENSE reference
- Removed unused code in dnacentersdk/generator_containers.py
- Remove description from validators
- Update comments & args' types
- Patch changes some parameters in v2_2_1 that were causing NameError
- Patch adds one function that was missing from previous release
- Patch adds models/validators for v2_2_1 with new ids

2.3.38 2.2.2 - 2021-05-10

Added

- Add support of DNA Center versions ('2.2.1')

Changed

- Updates requirements files

2.3.39 2.0.2 - 2020-11-01

Added

- Add support of DNA Center versions ('2.1.2')
- Included sphinx_search in Pipfile
- Included sphinx_search in requirements-dev.txt
- Requirements-docs.txt
- Added requirements.lock

Changed

- Migrated to poetry for publishing and managing the project
- Generated requirements.txt from poetry export

Removed

- Removed requirements.lock

2.3.40 2.0.0 - 2020-07-17

Added

- Add support of DNA Center versions ('1.3.1', '1.3.3', '2.1.1')
- Included setuptools_scm in the requirements

Changed

- Changed repo URLs to current repository
- Changed versioneer style from pep440 to pep440-post
- Changed setup from versioneer to setuptools_scm
- Changed version management to include patch (major, minor, patch)

Fixed

- Fixed link to github organization
- Fixed dict limit error with python < 3.7
- Fixed (json **kwargs) handling

Removed

- Removed Webex Teams Space Community reference from README
- Removed Token refresh when changing base_url

2.3.41 1.3.0 - 2019-08-19

Added

- Add support for multiple versions of DNA Center ('1.2.10', '1.3.0')

Fixed

- Fix code example in README
- Fix error in setter in `api/__init__.py`
- Fix errors for readthedocs

2.3.42 1.2.10 - 2019-07-18

Added

- Add support for DNA Center version 1.2.10

GENERAL INFORMATION ABOUT THE DNA CENTER SERVICE

3.1 What is DNA Center?

“A better way to control your network. Cisco DNA Center is the network management and command center for Cisco DNA Center, your intent-based network for the enterprise.”

Visit the official [DNA Center](#) website for more information and to create a [free account](#)!

3.2 DNA Center for Developers

Leveraging the DNA Center APIs and developing on top of the DNA Center cloud is easy. Signup for a [free account](#) and then head over to the [DNA Center for Developers](#) website to learn more.
